Exam4PDF is one of the leading platforms that has been helping AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) exam candidates for many years. Over this long time period we have helped AWS-Solutions-Architect-Associate exam candidates in their preparation. They got help from Exam4PDF AWS Certified Solutions Architect - Associate (SAA-C03) practice questions and easily got success in the final AWS-Solutions-Architect-Associate Certification Exam. You can also trust Exam4PDF AWS-Solutions-Architect-Associate exam dumps and start preparation with complete peace of mind and satisfaction.

Our AWS-Solutions-Architect-Associate study materials can improve your confidence for real AWS-Solutions-Architect-Associate exam and will help you remember the exam questions and answers that you will take part in. You can choose the version which suits you mostly. Our AWS-Solutions-Architect-Associate exam torrents simplify the important information and seize the focus to make you master the AWS-Solutions-Architect-Associate Test Torrent in a short time. To gain a comprehensive understanding of our AWS-Solutions-Architect-Associate study materials, you have to look at the introduction of our product firstly if you free download the demo of our AWS-Solutions-Architect-Associate exam questions.

Pass-Sure AWS-Solutions-Architect-Associate Valid Exam Camp, Ensure to pass the AWS-Solutions-Architect-Associate Exam

Exam4PDF is subservient to your development. And our experts generalize the knowledge of the exam into our products showing in three versions. PDF version of AWS-Solutions-Architect-Associate exam questions - support customers' printing request, and allow you to have a print and practice in papers. Software version of AWS-Solutions-Architect-Associate learning guide - supporting simulation test system, and remember this version support Windows system users only. App/online version of AWS-Solutions-Architect-Associate mock quiz - Being suitable to all kinds of equipment or digital devices, and you can review history and

performance better.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q524-Q529):

NEW QUESTION # 524

A company has enabled AWS CloudTrail logs to deliver log files to an Amazon S3 bucket for each of its developer accounts. The company has created a central AWS account for streamlining management and audit reviews. An internal auditor needs to access the CloudTrail logs, yet access needs to be restricted for all developer account users. The solution must be secure and optimized. How should a solutions architect meet these requirements?

- A. Configure an AWS Lambda function in each developer account to copy the log files to the central account. Create an IAM role in the central account for the auditor. Attach an IAM policy providing read-only permissions to the bucket.
- B. Configure CloudTrail from each developer account to deliver the log files to an S3 bucket in the central account. Create an IAM user in the central account for the auditor. Attach an IAM policy providing full permissions to the bucket.
- C. Configure an AWS Lambda function in the central account to copy the log files from the S3 bucket in each developer account. Create an IAM user in the central account for the auditor. Attach an IAM policy providing full permissions to the bucket.
- D. Configure CloudTrail from each developer account to deliver the log files to an S3 bucket in the central account. Create an IAM role in the central account for the auditor. Attach an IAM policy providing read-only permissions to the bucket.

Answer: A

NEW QUESTION # 525

What is the network performance offered by the c4.8xlarge instance in Amazon EC2?

- A. 10 Gigabit
- B. 5 Gigabit
- C. Very High but variable
- D. 20 Gigabit

Answer: A

Explanation:

Networking performance offered by the c4.8xlarge instance is 10 Gigabit.

NEW QUESTION # 526

A company is designing a new web application that will run on Amazon EC2 Instances. The application will use Amazon DynamoDB for backend data storage. The application traffic will be unpredictable. The company expects that the application read and write throughput to the database will be moderate to high. The company needs to scale in response to application traffic. Which DynamoDB table configuration will meet these requirements MOST cost-effectively?

- A. Configure DynamoDB with provisioned read and write by using the DynamoDB Standard Infrequent Access (DynamoDB Standard-IA) table class. Set DynamoDB auto scaling to a maximum defined capacity.
- B. Configure DynamoDB in on-demand mode by using the DynamoDB Standard Infrequent Access (DynamoDB Standard-IA) table class.
- C. Configure DynamoDB in on-demand mode by using the DynamoDB Standard table class.
- D. Configure DynamoDB with provisioned read and write by using the DynamoDB Standard table class. Set DynamoDB auto scaling to a maximum defined capacity.

Answer: C

Explanation:

The most cost-effective DynamoDB table configuration for the web application is to configure DynamoDB in on-demand mode by using the DynamoDB Standard table class. This configuration will allow the company to scale in response to application traffic and pay only for the read and write requests that the application performs on the table.

On-demand mode is a flexible billing option that can handle thousands of requests per second without capacity planning. On-

demand mode automatically adjusts the table's capacity based on the incoming traffic, and charges only for the read and write requests that are actually performed. On-demand mode is suitable for applications with unpredictable or variable workloads, or applications that prefer the ease of paying for only what they use¹.

The DynamoDB Standard table class is the default and recommended table class for most workloads. The DynamoDB Standard table class offers lower throughput costs than the DynamoDB Standard-Infrequent Access (DynamoDB Standard-IA) table class, and is more cost-effective for tables where throughput is the dominant cost. The DynamoDB Standard table class also offers the same performance, durability, and availability as the DynamoDB Standard-IA table class².

The other options are not correct because they are either not cost-effective or not suitable for the use case.

Configuring DynamoDB with provisioned read and write by using the DynamoDB Standard table class, and setting DynamoDB auto scaling to a maximum defined capacity is not correct because this configuration requires manual estimation and management of the table's capacity, which adds complexity and cost to the solution. Provisioned mode is a billing option that requires users to specify the amount of read and write capacity units for their tables, and charges for the reserved capacity regardless of usage. Provisioned mode is suitable for applications with predictable or stable workloads, or applications that require finer-grained control over their capacity settings¹. Configuring DynamoDB with provisioned read and write by using the DynamoDB Standard-Infrequent Access (DynamoDB Standard-IA) table class, and setting DynamoDB auto scaling to a maximum defined capacity is not correct because this configuration is not cost-effective for tables with moderate to high throughput. The DynamoDB Standard-IA table class offers lower storage costs than the DynamoDB Standard table class, but higher throughput costs. The DynamoDB Standard-IA table class is optimized for tables where storage is the dominant cost, such as tables that store infrequently accessed data².

Configuring DynamoDB in on-demand mode by using the DynamoDB Standard-Infrequent Access (DynamoDB Standard-IA) table class is not correct because this configuration is not cost-effective for tables with moderate to high throughput. As mentioned above, the DynamoDB Standard-IA table class has higher throughput costs than the DynamoDB Standard table class, which can offset the savings from lower storage costs.

NEW QUESTION # 527

A company stores 200 GB of data each month in Amazon S3. The company needs to perform analytics on this data at the end of each month to determine the number of items sold in each sales region for the previous month. Which analytics strategy is MOST cost-effective for the company to use?

- A. Create a table in the AWS Glue Data Catalog. Query the data in Amazon S3 by using Amazon Athena. Visualize the data in Amazon QuickSight.
- B. Create an Amazon Redshift cluster. Query the data in Amazon Redshift and upload the results to Amazon S3. Visualize the data in Amazon QuickSight.
- C. Create an Amazon EMR cluster. Query the data by using Amazon EMR and store the results in Amazon S3. Visualize the data in Amazon QuickSight.
- D. Create an Amazon Elasticsearch Service (Amazon ES) cluster. Query the data in Amazon ES. Visualize the data by using Kibana.

Answer: A

NEW QUESTION # 528

Every user you create in the IAM system starts with _____.
