NEW QUESTION # 22
Which of the following can be used as origin of condition? Note: There are 2 correct answers to this question.

- A. Direct business object access
- B. Data crawler
- C. Determination class
- D. BRFplus decision table

Answer: A,D

Explanation:
In SAP S/4HANA Transportation Management, conditions are used to determine objects or settings based on specific rules. According to the SAP documentation, the origins of conditions include:
* Direct business object access (A): Conditions can directly access business objects (e.g., freight orders or freight units) to retrieve data for rule evaluation, such as determining a freight agreement based on attributes like source location.
* BRFplus decision table (C): BRFplus (Business Rule Framework plus) decision tables are used as a condition origin to define complex rules in a tabular format, enabling dynamic determination of objects like rate tables or carriers.
The other options are incorrect:
* Determination class (B)is not a valid origin for conditions; it may be used in custom coding but not in standard condition configuration.
* Data crawler (D)is used for extracting data for reporting or analytics, not as a condition origin for rule determination.
