# Quiz Mule-Dev-201 - Fantastic Salesforce Certified MuleSoft Developer Valid Test Tutorial

In this information-dominated society, boosting plenty stocks of knowledge and being competent in some certain area can establish yourself in society and help you get a high social status. Passing Mule-Dev-201 certification can help you realize these goals and find a good job with high income. If you buy our Mule-Dev-201 practice test you can pass the exam successfully and easily. The purchase procedures are safe and we protect our client's privacy. We provide 24-hours online customer service and free update within one year. If you fail in the exam, we will refund you immediately. All in all, there are many advantages of our Mule-Dev-201 Training Materials.

Exam candidates hold great purchasing desire for our Mule-Dev-201 study questions which contribute to successful experience of former exam candidates with high quality and high efficiency. So our Mule-Dev-201 practice materials have great brand awareness in the market. They can offer systematic review of necessary knowledge and frequent-tested points of the Mule-Dev-201 Learning Materials. You cam familiarize yourself with our Mule-Dev-201 practice materials and their contents in a short time.

## 2026 Mule-Dev-201 Valid Test Tutorial | High-quality Mule-Dev-201 100% Free Test Dumps Demo

In this Desktop-based Salesforce Mule-Dev-201 practice exam software, you will enjoy the opportunity to self-exam your preparation. The chance to customize the Salesforce Mule-Dev-201 practice exams according to the time and types of Salesforce Certified MuleSoft Developer (Mule-Dev-201) practice test questions will contribute to your ease. This format operates only on Windows-based devices. But what is helpful is that it functions without an active internet connection. It copies the exact pattern and style of the real Salesforce Certified MuleSoft Developer (Mule-Dev-201) exam to make your preparation productive and relevant.

## Salesforce Certified MuleSoft Developer Sample Questions (Q150-Q155):

**NEW QUESTION # 150**
Following Mulesoft's recommended API-led connectivity approach , an organization has created an application network. The organization now needs to create API's to transform , orchestrate and aggregate the data provided by the other API's in the application network. This API should be flexible enought ot handle the data from additional API's in future.
According to Mulesoft's recommended API-led connectivity approach , what is the best layer for this new API?

- A. Experience layer
- B. Data layer
- C. System layer
- D. Process layer

**Answer: D**

Explanation:
Correct answer is process layer as all the orchestration and transformation logic should be in process layer as per Mulesoft's

recommended approach for API led connectivity.

API-led connectivity is a methodical way to connect data to applications through reusableand purposeful APIs. These APIs are developed to play a specific role - unlocking data from systems, composing data into processes, or delivering an experience.

What are the APIs that enable API-led connectivity?

API-led connectivity provides an approach for connecting and exposing assets. With this approach, rather than connecting things point-to-point, every asset becomes a managed API - a modern API, which makes it discoverable through self-service without losing control.

The APIs used in an API-ledapproach to connectivity fall into three categories:

System APIs - these usually access the core systems of record and provide a means of insulating the user from the complexity or any changes to the underlying systems. Once built, many users, can access data without any need to learn the underlying systems and can reuse these APIs in multiple projects.

Process APIs - These APIs interact with and shape data within a single system or across systems (breaking down data silos) and are created here without a dependence on the source systems from which that data originates, as well as the target channels through which that data is delivered.

Experience APIs - Experience APIs are the means by which data can be reconfigured so that it is most easily consumed by itsintended audience, all from a common data source, rather than setting up separate point-to- point integrations for each channel. An Experience API is usually created with API-first design principles where the API is designed for the specific user experience in mind.

## NEW QUESTION # 151

An API has been created in Design Center. What is the next step to make the API discoverable?

- A. Publish the API from inside flow designer
- B. Publish theAPI to Anypoint Exchange
- C. Enable autodiscovery in API Manager
- D. Deploy the API to a Maven repository

**Answer: B**

Explanation:

Correct answer is Publish the API to Anypoint Exchange

Anypoint Exchange makes this possible bymaking it discoverable in below ways

1) In private exchange for internal developers

2) In a public portal for external developers/clients

Here is diagram created by me to help you understand sequence:

## NEW QUESTION # 152

A Scatter-Gather processes three separate HTTP requests. Each request returns a Mule event with a JSON payload. What is the final output of the Scatter-Gather?

- **A. An Object containing all three Mule event Objects**
- B. An Array of the three Mule event Objects
- C. An Object containing all three JSON payload Objects
- D. An Array of the three JSON payload Objects

**Answer: A**

Explanation:

Correct answer is An Object containing all three Mule event Objects

The Scatter-Gather component is a routing event processor that processes a Mule event through different parallel processing routes that contain different event processors. Each route receives a reference to the Mule event and executes a sequence of one or more event processors. Each of these routes uses a separate thread to execute the event processors, and the resulting Mule event can be either the same Mule event without modifications or a new Mule event with its own payload, attributes, and variables. The Scatter-Gather componentthen combines the Mule events returned by each processingroute into a new Mule event that is passed to the next event processor only after every route completes successfully.

The Scatter-Gather component executes each route in parallel, not sequentially.Parallel execution of routes can greatly increase the efficiency of your Mule application and may provide more information than sequential processing.

Sample output is as below

MuleSoft Documentation reference :https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept

**NEW QUESTION # 153**
A Mule project contains a MySQL Database dependency. The projectis exported from Anypoint Studio so it can be deployed to CloudHub.
What export options create the smallest deployable archive that will successfully deploy to CloudHub?
What export option create their smallest deployable archive that will successfully deploy to CloudHub?

- A.

- B.

- C.

- D.

**Answer: C**

**NEW QUESTION # 154**
Refer to the exhibits.

The orders.csv file is read, then processed to look up the orders in a database. The Mule application is debugged in Any point Studio and stops at the breakpoint.
What is the payload shown in the debugger at this breakpoint?

- A. The database response
- B. 0
- C. The entire CSV file
- D. "none"

**Answer: B**

**NEW QUESTION # 155**
......

study materials is limited and little.
