ZertSoft haben schon viele Prüfungsteilnehmer bei dem Bestehen der Zscaler ZDTE Prüfung geholfen. Unsere Schlüssel ist die Zscaler ZDTE Prüfungsunterlagen, die von unserer professionellen IT-Gruppe für mehrere Jahre geforscht werden. Die Antworten davon werden auch ausführlich analysiert. Die Prüfung werden immer aktualisiert. Deshalb aktualisieren wir die Prüfungsunterlagen der Zscaler ZDTE immer wieder. Wir tun unser Bestes, um den sicheren Erfolg zu garantieren.

Unser ZertSoft bietet den Kandidaten nicht nur gute Produktem sondern auch vollständigen Service. Wenn Sie unsere Produkte benutzen, können Sie einen einjährigen kostenlosen Update-Service genießen. Wir benachrichtigen den Kandidaten in erster Zeit die neuen Prüfungsmaterialien zur Zscaler ZDTE Zertifizierung mit dem besten Service.

>> ZDTE Antworten <<

## Kostenlos ZDTE dumps torrent & Zscaler ZDTE Prüfung prep & ZDTE examcollection braindumps

ZertSoft hat schon einen guten Ruf im vielen Zertifizierungsbranchen erhalten, weil wir die Testfragen, die Lernhilfe und Dumps zur ZDTE Zertifizierungsprüfung haben. Zur Zeit als der professionellster Anbieter im Internet bieten wir perfekten Kundenservice und einen einjährigen kostenlosen Update-Service. Wenn der Fragenkataloge zur Zscaler ZDTE Zertifizierungsprüfung geändert werden, bieten wir den Kunden Schutz. Die Fragen zur ZDTE Zertifizierungsprüfung werden von den IT-Experten sorgfältig bearbeitet. Mit den Prüfungsmaterialien zur ZDTE Zertifizierungsprüfung von ZertSoft wird Ihre Zukunft sicher glänzend sein.

## Zscaler Digital Transformation Engineer ZDTE Prüfungsfragen mit Lösungen (Q60-Q65):

## 60. Frage

What is the primary benefit of using a subcloud in Zscaler?

- A. To guarantee that web traffic is forwarded to preferred ZIA Public Service Edges
- B. To increase the number of available Public Service Edges
- C. To improve the accuracy of geolocation data
- D. To eliminate the need for ZIA Public Service Edges

**Antwort: A**

Begründung:

A subcloud in Zscaler is defined as a subset of ZIA Public Service Edges (data centers) that you group together and associate with specific locations or traffic. Conceptually, it is a logical "pool" of preferred Public Service Edges. When a user or site is mapped to a given subcloud, their traffic is steered only to that selected subset of Service Edges instead of any available data center in the wider cloud.

The main benefit of this design is control and predictability: you can guarantee that web traffic is forwarded to your preferred ZIA Public Service Edges, which is critical when you must keep egress IPs stable for SaaS allow-lists, regulatory requirements, or local data-residency mandates. Subclouds also help with operational resilience, because you can temporarily exclude problematic data centers from a subcloud without changing overall forwarding methods, ensuring continuity while still using your defined group of Service Edges. They do not increase the number of Service Edges, replace ZIA Public Service Edges, or directly affect IP geolocation precision. Therefore, option C correctly captures the primary benefit expected in the ZDTE/EDU-202 context.

## 61. Frage

What is the default classification for a newly discovered application in the App Inventory in the Third-Party App Governance Admin Portal?

- A. Reviewing
- B. Sanctioned
- C. Unsanctioned
- D. Unclassified

**Antwort: D**

Begründung:

In Zscaler 3rd-Party App Governance documentation, the App Inventory is where administrators view and manage all discovered third-party apps, add-ons, and extensions. The "Classifying Apps" help article defines the available states: Unclassified, Sanctioned, Reviewing, and Unsanctioned. Crucially, it notes that Unclassified is the default state for any new application before an administrator evaluates it.

"Sanctioned" is used once the organization has explicitly approved an app for use; "Unsanctioned" is used when an app is not allowed; and "Reviewing" indicates it is under investigation. Those labels are the result of governance decisions applied after discovery.

ZDTE study materials on SaaS and app governance mirror this behavior: newly discovered apps enter the inventory without an explicit decision, allowing security teams to triage risk, review permissions, and only then mark them as sanctioned or unsanctioned. Because the default state for a new entry is explicitly documented as Unclassified, the correct answer is D. Unclassified.

## 62. Frage

A customer wants to set up an alert rule in ZDX to monitor the Wi-Fi signal on newly deployed laptops. What type of alert rule should they create?

- A. Device
- B. Application
- C. Network
- D. Interface

**Antwort: A**

Begründung:

Zscaler Digital Experience (ZDX) organizes its telemetry and alerting around key domains: Application, Network, and Device. Wi-Fi signal strength is a client-side characteristic of the endpoint itself, measured from the user's device, not from the network path or

the application service. In the ZDX training content, Wi-Fi signal, Wi-Fi link speed, CPU, memory, and similar metrics are clearly categorized under Device health.

When creating an alert rule to monitor newly deployed laptops, the administrator should therefore choose a Device-type alert and then select Wi-Fi signal-related metrics and thresholds. This allows ZDX to trigger alerts whenever the Wi-Fi signal on those endpoints falls below an acceptable level, helping operations teams quickly identify poor local wireless conditions that degrade user experience.

Network alerts are intended for end-to-end path health (latency, packet loss, DNS resolution, gateway reachability, etc.), and Application alerts focus on performance and availability of specific apps or services.

"Interface" as a standalone alert type is not how ZDX structures its top-level alert categories; interface-related metrics are surfaced as device-side attributes. Consequently, the correct classification for Wi-Fi signal monitoring in ZDX is a Device alert rule.

### 63. Frage

For App Connectors, why shouldn't the customer pre-configure memory and CPU resources to accommodate a higher bandwidth capacity, like 1 Gbps or more?

- A. Cloud resources are expensive. Don't advise the customer to waste money.
- B. Storage will be the primary bottleneck, so adding more RAM or CPU cycles won't improve performance anyway.
- C. They can and should, without concern. More resources are better.
- **D. Port exhaustion and file descriptors will often be the limiting factor, not memory or CPU.**

**Antwort: D**

Begründung:

In ZPA, App Connectors are designed to be lightweight, horizontally scalable components. Their effective throughput and concurrent-connection capacity are often constrained more by network stack limitations (such as ephemeral port exhaustion and per-process file descriptor limits) than by raw CPU or memory. As a result, simply over-provisioning vCPUs and RAM to "hit" a target like 1 Gbps on a single connector usually does not provide linear performance gains.

Zscaler design guidance emphasizes deploying multiple App Connectors and allowing ZPA to intelligently load-balance traffic across them. This delivers resiliency and scales capacity while staying within realistic limits of TCP/UDP ports and OS-level descriptors. Over-scaling a single connector can lead to diminishing returns and may even create harder-to-diagnose issues when port ranges or file descriptors are saturated.

Storage is not the main factor in App Connector performance, and the platform does not recommend a "just throw more resources at it" approach. For these reasons, the correct answer is that port exhaustion and file descriptors, rather than memory or CPU, are typically the true limiting factors for App Connectors.

### 64. Frage

What is the primary function of ZIA Public Service Edges in the Cloud Firewall architecture?

- A. Load balancing internet traffic
- B. Managing endpoint security updates
- C. Providing cloud storage services
- **D. Acting as key policy enforcement engines**

**Antwort: D**

Begründung:

Within the ZIA Cloud Firewall and broader Zscaler Internet Access architecture, Public Service Edges (PSEs) are the core policy enforcement points. User traffic is steered (via tunnels, PAC files, or agents) to the nearest PSE, where Zscaler performs security inspection and policy evaluation. At this point, the Cloud Firewall, URL filtering, SSL inspection, IPS, sandboxing, and other security engines are applied according to the user's identity, group, location, and defined policies.

Although the PSEs naturally participate in traffic distribution across the global Zscaler cloud, their primary purpose is not generic load balancing or network transit; rather, they host the full security stack and make real-time allow/deny/log decisions. They also enforce bandwidth controls, application rules, and advanced threat protections before forwarding allowed traffic to the internet. They are not responsible for managing endpoint security updates or providing general cloud storage. Instead, they serve as inline security gateways that enforce Zero Trust access and granular firewall rules at scale.

Therefore, the correct description of their role in the Cloud Firewall architecture is that they act as key policy enforcement engines.
