

2026 Microsoft Latest AZ-305 Exam Book - Designing Microsoft Azure Infrastructure Solutions Realistic Latest Exam Book 100% Pass Quiz

P.S. Free 2026 Microsoft AZ-305 dumps are available on Google Drive shared by PracticeDump: <https://drive.google.com/open?id=1Ej-mBhx1CE2bp6G2cHRMLdKwFXImhj8>

Where there is life, there is hope. Never abandon yourself. You still have many opportunities to counterattack. If you are lack of knowledge and skills, our AZ-305 guide questions are willing to offer you some help. Actually, we are glad that our AZ-305 Study Materials are able to become you top choice. Just look at the warm feedbacks from our AZ-305 learning braindumps, we are very popular in the whole market. And our AZ-305 exam guide won't let you down.

Microsoft AZ-305 exam is designed for individuals who have prior experience in designing and implementing solutions using Microsoft Azure cloud services. AZ-305 exam is one of the two exams required to earn the Microsoft Certified: Azure Solutions Architect Expert certification. AZ-305 exam focuses on testing the knowledge and skills of candidates in designing and implementing Azure infrastructure solutions, including compute, storage, networking, and security.

What are the prerequisites for Microsoft AZ-305 Certification?

There are no prerequisites for Microsoft AZ-305 certification. You just need to have a valid Microsoft Account.

Updated Latest AZ-305 Exam Book Spend Your Little Time and Energy to Clear Microsoft AZ-305: Designing Microsoft Azure Infrastructure Solutions exam

Our Microsoft AZ-305 preparation questions deserve you to have a try. As long as you free download the demos on our website, then you will love our AZ-305 preparation braindumps for its high quality and efficiency. All you have learned on our AZ-305 Study Materials will play an important role in your practice. We really want to help you solve all your troubles about learning the Microsoft AZ-305 exam.

Microsoft AZ-305 Exam is an excellent opportunity for professionals to demonstrate their skills in designing solutions on the Azure infrastructure. Designing Microsoft Azure Infrastructure Solutions certification will help professionals advance their careers and demonstrate their expertise in Azure. Designing Microsoft Azure Infrastructure Solutions certification is also a valuable asset for organizations that are looking to hire professionals with skills in designing and implementing Azure solutions.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q101-Q106):

NEW QUESTION # 101

You have an on-premises network that uses an IP address space of 172.16.0.0/16. You plan to deploy 25 virtual machines to a new Azure subscription. You identify the following technical requirements:

- * All Azure virtual machines must be placed on the same subnet named Subnet1.
- * All the Azure virtual machines must be able to communicate with all on-premises servers.
- * The servers must be able to communicate between the on-premises network and Azure by using a site-to-site VPN.

You need to recommend a subnet design that meets the technical requirements.

What should you include in the recommendation? To answer, drag the appropriate network addresses to the correct subnets. Each network address may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

NEW QUESTION # 102

You are designing a large Azure environment that will contain many subscriptions.

You plan to use Azure Policy as part of a governance solution.

To which three scopes can you assign Azure Policy definitions? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. management groups
- B. compute resources
- C. Azure Active Directory (Azure AD) administrative units
- D. resource groups
- E. subscriptions
- F. Azure Active Directory (Azure AD) tenants

Answer: A,D,E

Explanation:

Azure Policy evaluates resources in Azure by comparing the properties of those resources to business rules.

Once your business rules have been formed, the policy definition or initiative is assigned to any scope of resources that Azure supports, such as management groups, subscriptions, resource groups, or individual resources.

<https://docs.microsoft.com/en-us/azure/governance/policy/overview>

NEW QUESTION # 103

You plan to deploy an Azure web app named App1 that will use Azure Active Directory (Azure AD) authentication. App1 will be accessed from the internet by the users at your company. All the users have computers that run Windows 10 and are joined to Azure AD.

You need to recommend a solution to ensure that the users can connect to App1 without being prompted for authentication and can access App1 only from company-owned computers.

What should you recommend for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

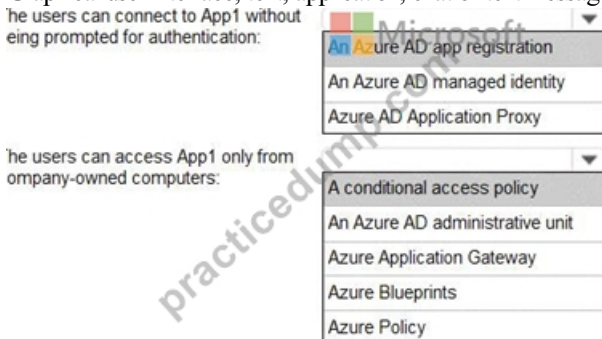

Answer:

Explanation:

Explanation:

Graphical user interface, text, application, chat or text message Description automatically generated

Box 1: An Azure AD app registration

Azure active directory (AD) provides cloud based directory and identity management services. You can use azure AD to manage users of your application and authenticate access to your applications using azure active directory.

You register your application with Azure active directory tenant.

Box 2: A conditional access policy

Conditional Access policies at their simplest are if-then statements, if a user wants to access a resource, then they must complete an action.

By using Conditional Access policies, you can apply the right access controls when needed to keep your organization secure and stay out of your user's way when not needed.

Timeline Description automatically generated

<https://codingcanvas.com/using-azure-active-directory-authentication-in-your-web-application/>

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/overview>

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/walkthrough-register-app-azure-active-dire>

"After consenting to use their Dataverse account with the ISV's application, end users can connect to Dataverse environment from external application. The consent form is not displayed again to other users after the first user who has already consented to use the ISV's app. Apps registered in Azure Active Directory are multi-tenant, which implies that other Dataverse users from other tenant can connect to their environment using the ISV's app."

NEW QUESTION # 104

You plan to migrate App1 to Azure.

You need to estimate the compute costs for App1 in Azure. The solution must meet the security and compliance requirements.

What should you use to estimate the costs, and what should you implement to minimize the costs? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To estimate the costs, use:

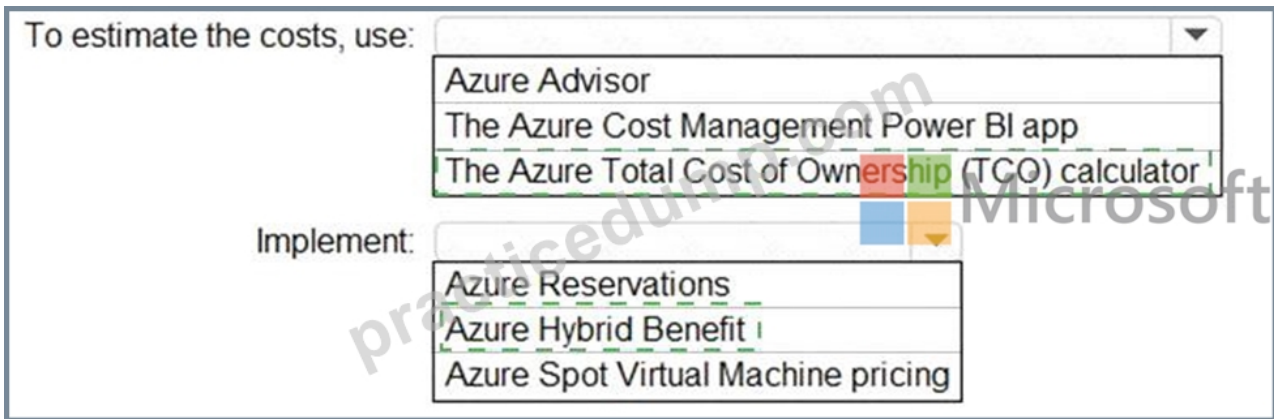

- Azure Advisor
- The Azure Cost Management Power BI app
- The Azure Total Cost of Ownership (TCO) calculator

Implement:

- Azure Reservations
- Azure Hybrid Benefit
- Azure Spot Virtual Machine pricing

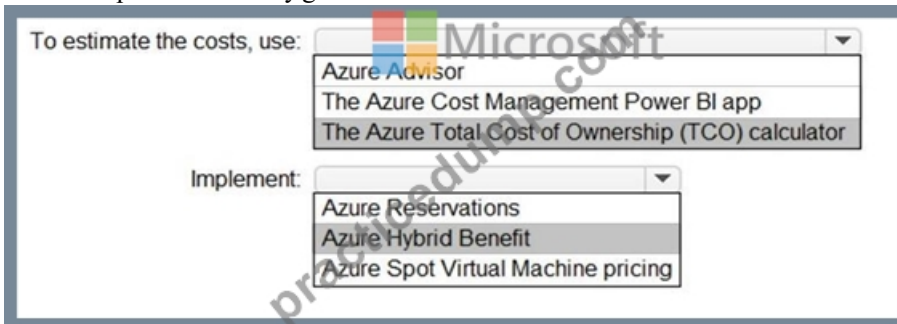

Answer:

Explanation:

Explanation

Text Description automatically generated

Box 1: The Azure Total Cost of Ownership (TCO) Calculator

The Total Cost of Ownership (TCO) Calculator estimates the cost savings you can realize by migrating your workloads to Azure.

Note: The TCO Calculator recommends a set of equivalent services in Azure that will support your applications. Our analysis will show each cost area with an estimate of your on-premises spend versus your spend in Azure. There are several cost categories that either decrease or go away completely when you move workloads to the cloud.

Box 2: Azure Hybrid Benefit

Azure Hybrid Benefit is a licensing benefit that helps you to significantly reduce the costs of running your workloads in the cloud. It works by letting you use your on-premises Software Assurance-enabled Windows Server and SQL Server licenses on Azure. And now, this benefit applies to RedHat and SUSE Linux subscriptions, too.

Scenario:

Litware identifies the following security and compliance requirements:

- * Once App1 is migrated to Azure, you must ensure that new data can be written to the app, and the modification of new and existing data is prevented for a period of three years.
- * On-premises users and services must be able to access the Azure Storage account that will host the data in App1.
- * Access to the public endpoint of the Azure Storage account that will host the App1 data must be prevented.
- * All Azure SQL databases in the production environment must have Transparent Data Encryption (TDE) enabled.
- * App1 must not share physical hardware with other workloads.

NEW QUESTION # 105

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company deploys several virtual machines on-premises and to Azure. ExpressRoute is deployed and configured for on-premises to Azure connectivity.

Several virtual machines exhibit network connectivity issues.

You need to analyze the network traffic to identify whether packets are being allowed or denied to the virtual machines.

Solution: Use Azure Advisor to analyze the network traffic.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Instead use Azure Network Watcher IP Flow Verify, which allows you to detect traffic filtering issues at a VM level.

Note: IP flow verify checks if a packet is allowed or denied to or from a virtual machine. The information consists of direction, protocol, local IP, remote IP, local port, and remote port. If the packet is denied by a security group, the name of the rule that denied the packet is returned.

While any source or destination IP can be chosen, IP flow verify helps administrators quickly diagnose connectivity issues from or to the internet and from or to the on-premises environment.
