Splunk SPLK-1002 Exam Dumps - A Surefire Way To Achieve Success

One of the biggest highlights of the Splunk Core Certified Power User Exam prep torrent is the availability of three versions: PDF, app/online, and software/pc, each with its own advantages: The PDF version of SPLK-1002 Exam Torrent has a free demo available for download. You can print exam materials out and read it just like you read a paper. The online version of SPLK-1002 test guide is based on web browser usage design and can be used by any browser device. At the same time, the first time it is opened on the Internet, it can be used offline next time. You can practice anytime, anywhere. The Splunk Core Certified Power User Exam software supports the MS operating system and can simulate the real test environment. The contents of the three versions are the same.

Splunk Core Certified Power User Exam Sample Questions (Q156-Q161):

NEW QUESTION # 156
How could the following syntax for the chart command be rewritten to remove the OTHER category? (select all that apply)

- A. | chart count over CurrentStanding by Action useother=f
- B. | chart count over CurrentStanding by Action limit-10
- C. | chart count over CurrentStanding by Action limit=10 useother=f
- D. | chart count over CurrentStanding by Action usenull-f useother-t

Answer: A,C

Explanation:
In Splunk, when using the chart command, the useother parameter can be set to false (f) to remove the 'OTHER' category, which is a bucket that Splunk uses to aggregate low-cardinality groups into a single group to simplify visualization. Here's how the options break down:
A: | chart count over CurrentStanding by Action useother=fThis command correctly sets the useother parameter to false, which would prevent the 'OTHER' category from being displayed in the resulting visualization.
B: | chart count over CurrentStanding by Action usenull=f useother=tThis command has useother set to true (t), which means the 'OTHER' category would still be included, so this is not a correct option.
C: | chart count over CurrentStanding by Action limit=10 useother=fSimilar to option A, this command also sets useother to false, additionally imposing a limit to the top 10 results, which is a way to control the granularity of the chart but also to remove the 'OTHER' category.
D: | chart count over CurrentStanding by Action limit-10This command has a syntax error (limit-10 should be limit=10) and does not include the useother=f clause. Therefore, it would not remove the 'OTHER' category, making it incorrect.
The correct answers to rewrite the syntax to remove the 'OTHER' category are options A and C, which explicitly set useother=f.

NEW QUESTION # 157
Selected fields are displayed _____each event in the search results.

- A. above
- B. interesting fields
- C. below
- D. other fields

Answer: C

Explanation:
Explanation
Selected fields are fields that you choose to display in your search results by clicking on them in the Fields sidebar or by using the fields command2. Selected fields are displayed below each event in the search results, along with their values2. Therefore, option A is correct, while options B, C and D are incorrect because they are not places where selected fields are displayed.

NEW QUESTION # 158
A field alias has been created based on an original field. A search without any transforming commands is then executed in Smart Mode. Which field name appears in the results?

- A. The alias only appears in the All Fields list and the original field only appears in the Interesting Fields list.
- B. The original field only appears in All Fields list and the alias only appears in the Interesting Fields list.
- C. Both will appear in the Interesting Fields list, but only if they appear in at least 20 percent of events.
- D. Both will appear in the All Fields list, but only if the alias is specified in the search.

Answer: C

Explanation:
Explanation
A field alias is a way to assign an alternative name to an existing field without changing the original field name or value2. You can use field aliases to make your field names more consistent or descriptive across different sources or sourcetypes2. When you run a search without any transforming commands in Smart Mode, Splunk automatically identifies and displays interesting fields in your results2. Interesting fields are fields that appear in at least 20 percent of events or have high variability among values2. If you have created a field alias based on an original field, both the original field name and the alias name will appear in the Interesting Fields list if they meet these criteria2. However, only one of them will appear in each event depending on which one you have specified in your search string2. Therefore, option B is correct, while options A, C and D are incorrect.

NEW QUESTION # 159
Which of the following can be saved as an event type?

- A. index=server_48 sourcetype=BETA_881 code=220 | stats count by code
- B. index=server_48 sourcetype=BETA_881 code=220 | inputlookup append=t servercode.csv

- C. index=server_48 sourcetype=BETA_881 code=220
- D. index=server_48 sourcetype=BETA_881 code=220 | stats where code > 220

Answer: C

Explanation:
An event type is a classification of events based on a search query, which allows for a static set of search criteria. In this case, option A (index=server_48 sourcetype=BETA_881 code=220) represents a simple search without transforming commands (e.g., stats, inputlookup). Event types cannot include transforming commands such as stats or lookup.

Splunk Documentation - Event Types

NEW QUESTION # 160
Which of the following searches show a valid use of macro? (Select all that apply)

- A. index=main source=mySource oldField=* | stats if('makeMyField(oldField)') | table _time newField
- B. index=main source=mySource oldField=* | '"newField('makeMyField(oldField)')"' | table _time newField
- C. index=main source=mySource oldField=* |'makeMyField(oldField)'| table _time newField
- D. index=main source=mySource oldField=* | eval newField='makeMyField(oldField)'| table _time newField

Answer: C,D

Explanation:
Reference:https://answers.splunk.com/answers/574643/field-showing-an-additional-and-not-visible-value-1.html
To use a macro in a search, you must enclose the macro name and any arguments in single quotation marks1. For example, 'my_macro(arg1,arg2)' is a valid way to use a macro with two arguments. You can use macros anywhere in your search string where you would normally use a search command or expression1. Therefore, options A and C are valid searches that use macros, while options B and D are invalid because they do not enclose the macros in single quotation marks.

NEW QUESTION # 161
.....

Our SPLK-1002 study materials can help you pass the exam faster and take the certificate you want with the least time and efforts. Then you will have one more chip to get a good job. Our SPLK-1002 study braindumps allow you to stand at a higher starting point, pass the SPLK-1002 Exam one step faster than others, and take advantage of opportunities faster than others.
