Salesforce OmniStudio-Developer exam is a challenging exam that requires a developer to have a deep understanding of the platform's various tools and features. Developers who pass OmniStudio-Developer exam are considered experts in the platform and are highly sought after by clients looking for custom solutions. OmniStudio-Developer exam is a multiple-choice exam with 60 questions that must be completed within 105 minutes. The passing score for the exam is 68%, and a developer must retake the exam every two years to maintain their certification.

OmniStudio is a powerful low-code development platform that enables businesses to build and customize applications quickly and easily. The platform offers a variety of tools and features that allow developers to create complex applications without writing much code. The Salesforce OmniStudio-Developer Certification Exam is designed to test developers' knowledge of the platform and their ability to leverage its features to create custom applications.

Earning the Salesforce OmniStudio-Developer certification is an excellent way for developers to advance their careers and demonstrate their expertise in the Salesforce platform. Salesforce Certified OmniStudio Developer certification is recognized by businesses worldwide and is highly valued by employers. Salesforce offers a range of resources to help developers prepare for the exam, including training courses, study guides, and practice exams. With these resources, developers can gain the knowledge and skills needed to pass the exam and become certified OmniStudio Developers.

Salesforce Certified OmniStudio Developer Sample Questions (Q106-Q111):

NEW QUESTION # 106

Refer to the exhibit below. A developer has configured an integration Procedure element with Additional input.

Alternatively, how could the developer configure SEND/RESPONSE TRNSFORMATION to send exactly the same data?

Assume the developer has un-checked Send Only Additional input.

Additional Input

SecondaryAccount

fx %DRExtractAction:Account%
salesforce

- A.

- B.

- C.

- D.

Answer: D

Explanation:

The Send JSON Path syntax for accessing an element from an Integration Procedure structure is BlockName.ElementName. In this case, the BlockName is BlockX and the ElementName is ActionZ. The colon (:) is used to separate the input and output parameters, not the block and element names. The order of the block and element names should follow the hierarchy of the structure, from top to bottom. The Additional input parameter is not needed in this case, as it is already included in the Send JSON Path.

NEW QUESTION # 107

A developer is creating an OmniScript that provisions trail orgs to their customers. The following text block in the Omniscript uses a merge code to display the ID for the new trail org.

Welcome to Salesforce!
Your ID is %Details:Customer|0:ID%

salesforce

During testing, the developer notices that the ID does not display. The data JSON is structured as shown below.

How should the developer correct the merge code in order for the ID to display?

```
{
  "Details": {
    "Customer": [
      {"ID": "123456"}
    ]
  }
}
```

- A. To %Details:Customer|1:ID%
- B. To %sDetails:Customer|0:ID%
- C. To %sDetails:Customer|0:ID\$
- D. To %Details:Customer|n:ID%

Answer: A

Explanation:

The correct syntax for merge codes in OmniScript is %%sNodeName%%, where NodeName is the name of the JSON node in the data source. The other options are either missing the s or using incorrect symbols.

NEW QUESTION # 108

Which context variable is set in the card designer and allows access to any property in scope plus the {{payload}} variable?

- A. Attributes {{attrs}}
- B. Page parameters {{params}}
- C. Session variables {{session}}
- D. Object {{obj}}

Answer: C

NEW QUESTION # 109

Refer to the exhibit.

A developer has configured an integration Procedure element with SEND/RESPONSE TRANSFORMATIONS as shown. Alternatively, how could the developer configure Additional input to send exactly the same data? Assume that the developer checked Send Only Additional input.

A)

| Key | Value |
|------------------|-------------------------|
| SecondaryAccount | DRExtractAction:Account |

B)

| Key | Value |
|-------------------------|------------------|
| DRExtractAction:Account | SecondaryAccount |

C)

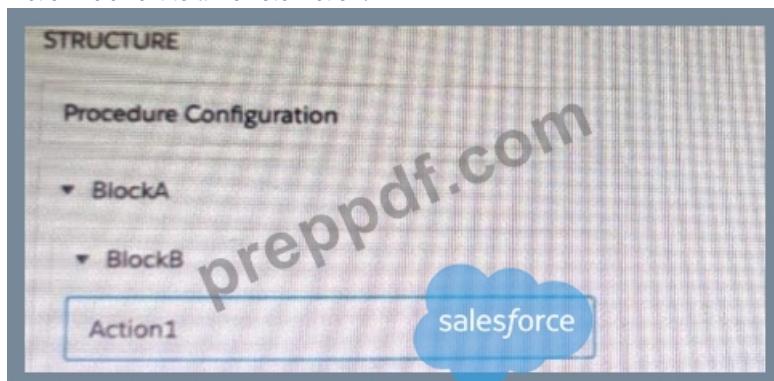

| Key | Value |
|------------------|-------------------------|
| SecondaryAccount | DRExtractAction:Account |

- A. Option C
- B. Option A
- C. Option B

Answer: A

NEW QUESTION # 110

Refer to the exhibit below. In this integration production structure, what Send JSON Path would be used to send the Output of the Action1 element to a Remote Action?

- A. Action1: BlockB. Block A

- B. BlockA: BlockB. Action 1
- C. Action1. BlockB. Block A
- D. BlockB:BlockB. Action1

Answer: A

Explanation:

The correct syntax for the Send JSON Path is ActionName: BlockName, where ActionName is the name of the action element and BlockName is the name of the block element that contains the output data. The other options are either missing the colon or using incorrect names.

NEW QUESTION # 111

.....

As the quick development of the world economy and intense competition in the international, the world labor market presents many new trends: company's demand for the excellent people is growing. As is known to us, the OmniStudio-Developer certification is one mainly mark of the excellent. If you don't have enough ability, it is very possible for you to be washed out.
