CompTIA 220-1201 Latest Exam Tips, New 220-1201 Test Forum

As a reliable product website, we have the responsibility to protect our customers' personal information leakage and your payment

security. So you can be rest assured the purchase of our 220-1201 exam software. Besides, we have the largest IT exam repository, if you are interested in 220-1201 Exam or any other exam dumps, you can search on our Prep4sureGuide or chat with our online support any time you are convenient. Wish you success in 220-1201 exam.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q108-Q113):

NEW QUESTION # 108

A customer built a computer for gaming, sourcing individual components and then assembling the system.

The OS starts up, but within a few minutes the machine locks up. The customer brought the computer to a technician to diagnose the issue.

Answer:

Explanation:

Explanation:

correct

answer is "Overclocking" and "Reduce CPU Clock speed" CPU is at 4.5 Ghz when normal is 3.2 Ghz.

Overclocking too much can cause freezes, and this is a gaming computer so the user probably took it too far.

NEW QUESTION # 109

Which of the following is an advantage of using a hybrid cloud instead of a public cloud?

- A. Ability to use cross-platform virtualization
- B. Ability to reduce management overhead
- C. Ability to meet data residency requirements
- D. Ability to leverage IaaS and PaaS

Answer: C

Explanation:

A hybrid cloud combines on-premises infrastructure with public cloud services. One significant advantage is that it allows organizations to keep sensitive data in a private environment to meet regulatory or data residency requirements, while still utilizing the scalability and cost-efficiency of the public cloud for other workloads. This ensures compliance with legal mandates about data location.

NEW QUESTION # 110

Which of the following internet connection types is the best for extremely high data transfer with symmetrical upload and download speeds?

- A. Cellular
- B. Satellite
- C. DSL
- D. Fiber

Answer: D

Explanation:

Fiber optic connections provide the highest data transfer rates and symmetrical upload and download speeds. This makes fiber the ideal choice for applications requiring high-speed connectivity, such as video conferencing, large file transfers, and cloud-based workflows.
Reference: CompTIA A+ Certification Exam Core 1 Objectives - Domain 2.0 Networking - Objective 2.7:
Compare and contrast internet connection types, network types, and their features.

NEW QUESTION # 111

A customer is able to print most documents with their USB inkjet printer, but the system is unresponsive when printing a certain report from a custom application. Nothing will print until the computer is restarted and the printer is power cycled. A technician remotes into the PC and confirms that the spooler stops working when this report is sent. After cleaning the spooler and reinstalling the drivers from the manufacturer's website, the issue persists. No other sites using the application report similar issues. Which of the following is most likely causing the issue?

- A. Personal preferences have changed and documents with graphics are now online-only
- B. The system is using the PostScript language instead of the PCL.
- C. The application has a bug that the developer needs to address.
- D. The manufacturer is curating content before it reaches the device to preserve ink.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

If a print spooler crashes specifically with one application and no issue occurs on other systems, the most likely root cause is a bug within that specific application. Restarting the spooler and reinstalling drivers resolves system-wide or hardware-related issues-not app-specific failures. This indicates the application may be sending malformed print data.

NEW QUESTION # 112

Which of the following network services is used to assign an IP address to a network host?

- A. DHCP
- B. SMTP
- C. DNS
- D. LDAP

Answer: A

Explanation:

DHCP (Dynamic Host Configuration Protocol) is the service used to automatically assign IP addresses to network hosts. It dynamically manages the distribution of IP addresses and configuration details (like subnet mask, gateway, and DNS servers), ensuring no two devices are assigned the same address on the network.

Option B (DNS): Incorrect. DNS translates domain names into IP addresses but does not assign them.

Option C (LDAP): Incorrect. LDAP is a protocol used for accessing and maintaining directory services, such as user information and permissions.

Option D (SMTP): Incorrect. SMTP is used for sending and receiving email, not for IP address assignment.
