

Amazon AWS-DevOps-Engineer-Professional Downloadable PDF - AWS-DevOps-Engineer- Professional Cert

What's more, part of that Test4Sure AWS-DevOps-Engineer-Professional dumps now are free: https://drive.google.com/open?id=1yo_QrbRjYaZHArAwHvwUznhfTcTwipFB

Users can customize the time and AWS-DevOps-Engineer-Professional questions of Amazon AWS-DevOps-Engineer-Professional practice tests according to their needs. You can give more than one test and track the progress of your previous attempts to improve your marks on the next try. These AWS-DevOps-Engineer-Professional mock tests are made for customers to note their mistakes and avoid them in the next try to pass AWS Certified DevOps Engineer - Professional (AWS-DevOps-Engineer-Professional) exam in a single try.

To be eligible for the AWS-DevOps Exam, candidates must have a current AWS Certified Solutions Architect – Associate or AWS Certified Developer – Associate certification. They should also have at least two years of experience in provisioning, operating, and managing AWS environments and at least one year of experience in DevOps practices. Candidates who meet these requirements and pass the exam will earn the AWS Certified DevOps Engineer - Professional certification, which is recognized as a mark of excellence in the DevOps field.

Best Solution to prepare AWS DevOps Engineer Professional Exam

The candidate will not have to take the AWS DevOps Engineer Professional twice because with the help of the **AWS DevOps Engineer Professional exam dumps** Candidate will have every valuable material required to pass the AWS DevOps Engineer Professional Exam. We are providing the latest and actual questions and that is the reason why this is the one that he needs to use and there are no chances to fail when a candidate will have valid **AWS DevOps Engineer Professional exam dumps** from Test4Sure. We have the guarantee that the questions that we have will be the ones that will pass the candidate in the AWS DevOps Engineer Professional Exam in the very first attempt. Test4Sure offer you authentic AWS DevOps Engineer Professional questions. Apart from this we also provide AWS DevOps Engineer Professional practice test which includes all the practice questions for the AWS DevOps Engineer Professional, AWS DevOps Engineer Professional exam dumps that will ensure 100% passing surety and the simple user interface of AWS DevOps Engineer Professional practice test. Our hired professionals who passed their (Exam name) well contribute to making (Exam name) exam dumps updated with AWS DevOps Engineer Professional new questions to ensure candidates to clear their AWS DevOps Engineer Professional certification exam at first attempt.

100% Pass 2025 High-quality Amazon AWS-DevOps-Engineer-Professional: AWS Certified DevOps Engineer - Professional Downloadable PDF

Our company is a professional certificate exam materials provider. We offer candidates high quality questions and answers for the AWS-DevOps-Engineer-Professional exam bootcamp, and they can pass the exam through learning and practicing the materials. You can get the AWS-DevOps-Engineer-Professional Exam Bootcamp about ten minutes after your payment, and if you have any questions about the AWS-DevOps-Engineer-Professional exam dumps, you can notify us by email or you can chat with our online chat service.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q19-Q24):

NEW QUESTION # 19

A defect was discovered in production and a new sprint item has been created for deploying a hotfix. However, any code change must go through the following steps before going into production:

- Scan the code for security breaches, such as password and access key leaks.

- Run the code through extensive, long running unit tests.

Which source control strategy should a DevOps Engineer use in combination with AWS CodePipeline to complete this process?

- A. Create a hotfix tag on the last commit of the master branch. Trigger the development pipeline from the hotfix tag. Use AWS CodeDeploy with Amazon ECS to do a content scan and run unit tests. Add a manual approval stage that merges the hotfix tag into the master branch.
- B. Create a hotfix branch from the master branch. Create a separate source stage for the hotfix branch in the production pipeline. Trigger the pipeline from the hotfix branch. Use AWS Lambda to do a content scan and use AWS CodeBuild to run unit tests. Add a manual approval stage that merges the hotfix branch into the master branch.
- C. Create a hotfix branch from the master branch. Trigger the development pipeline from the hotfix branch. Use AWS CodeBuild to do a content scan and run unit tests. Add a manual approval stage that merges the hotfix branch into the master branch.
- D. Create a hotfix branch from the master branch. Trigger the development pipeline from the hotfix branch. Use AWS Lambda to do a content scan and run unit tests. Add a manual approval stage that merges the hotfix branch into the master branch.

Answer: C

Explanation:

We need to create a feature branch to test the fix and codebuild can do both the scan and unit tests.

<https://docs.aws.amazon.com/codebuild/latest/userguide/how-to-create-pipeline.html#how-to-create-pipeline-add>

NEW QUESTION # 20

A DevOps Engineer just joined a new company that is already running workloads on Amazon EC2 instances.

AWS has been adopted incrementally with no central governance. The Engineer must now assess how well the existing deployments comply with the following requirements:

- * EC2 instances are running only approved AMIs.

- * Amazon EBS volumes are encrypted.

- * EC2 instances have an Owner tag.

- * Root login over SSH is disabled on EC2 instances.

Which services should the Engineer use to perform this assessment with the LEAST amount of effort? (Select TWO.)

- A. Amazon GuardDuty
- B. Amazon Inspector
- C. AWS Directory Service
- D. AWS Config
- E. AWS System Manager

Answer: D,E

NEW QUESTION # 21

A legacy web application stores access logs in a proprietary text format. One of the security requirements is to search application access events and correlate them with access data from many different systems.

These searches should be near-real time.

Which solution offloads the processing load on the application server and provides a mechanism to search the data in near-real time?

- A. Upload the log files to Amazon S3 by using the S3 sync command. Use Amazon Athena to define the structure of the data as a table, with Athena SQL queries to search for access events.
- B. Install the Amazon CloudWatch Logs agent on the application server and use CloudWatch Events rules to search logs for access events. Use Amazon CloudSearch as an interface to search for events.
- C. Use the third-party file-input plugin Logstash to monitor the application log file, then use a custom dissect filter on the agent to parse the log entries into the JSON format. Output the events to Amazon ES to be searched. Use the Elasticsearch API for querying the data.
- D. Install the Amazon Kinesis Agent on the application server, configure it to monitor the log files, and send it to a Kinesis stream. Configure Kinesis to transform the data by using an AWS Lambda function, and forward events to Amazon ES for analysis. Use the Elasticsearch API for querying the data.

Answer: D

NEW QUESTION # 22

Which of the following is not a supported platform on Elastic Beanstalk?

- A. Nodejs
- B. Go
- C. PackerBuilder
- D. JavaSE
- E. Kubernetes

Answer: E

Explanation:

Explanation

Answer-C

Below is the list of supported platforms

*Packer Builder

*Single Container Docker

*Multicontainer Docker

*Preconfigured Docker

*Go

*Java SE

*Java with Tomcat

*NET on Windows Server with IIS

*Nodejs

*PHP

*Python

*Ruby

For

more information on the supported platforms please refer to the below link

<http://docs.aws.amazon.com/elasticbeanstalk/latest/dg/concepts.platforms.html>

NEW QUESTION # 23

You need to perform ad-hoc business analytics queries on well-structured data. Data comes in constantly at a high velocity. Your business intelligence team can understand SQL. What AWS service(s) should you look to first?

- A. Kinesis Firehose + RDS
- B. EMR running Apache Spark

- C. Kinesis Firehose+RedShift
- D. EMR using Hive

Answer: C

Explanation:

Explanation

Amazon Kinesis Firehose is the easiest way to load streaming data into AWS. It can capture, transform, and load streaming data into Amazon Kinesis

Analytics, Amazon S3, Amazon Redshift, and Amazon Elasticsearch Service, enabling near real-time analytics with existing business intelligence tools and

dashboards you're already using today. It is a fully managed service that automatically scales to match the throughput of your data and requires no ongoing

administration. It can also batch, compress, and encrypt the data before loading it, minimizing the amount of storage used at the destination and increasing security.

For more information on Kinesis firehose, please visit the below URL:

* <https://aws.amazon.com/kinesis/firehose/>

Amazon Redshift is a fully managed, petabyte-scale data warehouse service in the cloud. You can start with just a few hundred gigabytes of data and scale to a petabyte or more. This enables you to use your data to acquire new insights for your business and customers. For more information on Redshift, please visit the below URL:

* <http://docs.aws.amazon.com/redshift/latest/mgmt/welcome.html>

NEW QUESTION # 24
