

# Amazon AWS-DevOps Pdf Braindumps | New AWS-DevOps Exam Bootcamp

2025 Latest ITPassLeader AWS-DevOps PDF Dumps and AWS-DevOps Exam Engine Free Share:  
<https://drive.google.com/open?id=1mtJ1TPv4PqjRtaqCn8Q6qj9U6BuHADW2>

The clients can download our AWS-DevOps exam questions and use our them immediately after they pay successfully. Our system will send our AWS-DevOps learning prep in the form of mails to the client in 5-10 minutes after their successful payment. The mails provide the links and if only the clients click on the links they can log in our software immediately to learn our AWS-DevOps Guide materials. It is fast and convenient!

The DOP-C01 exam focuses on testing the candidate's ability to design, deploy, and automate scalable, highly available, and fault-tolerant systems on AWS. It covers a wide range of topics such as continuous integration and delivery, monitoring and logging, security, infrastructure as code, and automation. Candidates who pass the exam demonstrate their ability to manage and operate distributed application systems on AWS and can help organizations to accelerate their DevOps journey.

## Quiz 2025 AWS-DevOps: AWS Certified DevOps Engineer - Professional – Updated Pdf Braindumps

We all know the effective diligence is in direct proportion to outcome, so by years of diligent work, our experts have collected the frequent-tested knowledge into our Amazon AWS-DevOps practice materials for your reference. So our AWS Certified DevOps Engineer - Professional training materials are triumph of their endeavor.

### Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q336-Q341):

#### NEW QUESTION # 336

You are planning on using encrypted snapshots in the design of your AWS Infrastructure. Which of the following statements are true with regards to EBS Encryption

- A. Snapshotting an encrypted volume makes an encrypted snapshot; restoring an encrypted snapshot creates an encrypted volume when specified / requested.
- **B. Snapshotting an encrypted volume makes an encrypted snapshot; restoring an encrypted snapshot always creates an encrypted volume.**
- C. Snapshotting an encrypted volume makes an encrypted snapshot when specified / requested; restoring an encrypted snapshot creates an encrypted volume when specified / requested.
- D. Snapshotting an encrypted volume makes an encrypted snapshot when specified / requested; restoring an encrypted snapshot always creates an encrypted volume.

**Answer: B**

Explanation:

#### Explanation

Amazon CBS encryption offers you a simple encryption solution for your CBS volumes without the need for you to build, maintain, and secure your own key management infrastructure. When you create an encrypted CBS volume and attach it to a supported instance type, the following types of data are encrypted:

- \* Data at rest inside the volume
- \* All data moving between the volume and the instance
- \* All snapshots created from the volume

Snapshots that are taken from encrypted volumes are automatically encrypted. Volumes that are created from encrypted snapshots are also automatically encrypted.

For more information on CBS encryption, please visit the below URL:

\* <http://docs.aws.amazon.com/AWSCC2/latest/UserGuide/CBSEncryption.html>

#### NEW QUESTION # 337

When specifying more than one conditional requirements for a task, what is the proper method?

- A. - when: foo == "hello" and bar == "world"
- B. - when: foo == "hello" && bar == "world"
- C. - when: foo == "hello" - when: bar == "world"
- D. - when: foo is "hello" and bar is "world"

**Answer: A**

#### Explanation:

Ansible will allow you to stack conditionals using 'and' and 'or'. It requires it to be in the same

'when' statement, comparisons must be '=' for equals or '!=' for not equals and the 'and/or' must be written as such, not '&&/||'.

Reference: [http://docs.ansible.com/ansible/playbooks\\_conditionals.html#the-when-statement](http://docs.ansible.com/ansible/playbooks_conditionals.html#the-when-statement)

#### NEW QUESTION # 338

A legacy web application stores access logs in a proprietary text format. One of the security requirements is to search application access events and correlate them with access data from many different systems. These searches should be near-real time.

Which solution offloads the processing load on the application server and provides a mechanism to search the data in near-real time?

- A. Upload the log files to Amazon S3 by using the S3 synccommand. Use Amazon Athena to define the structure of the data as a table, with Athena SQL queries to search for access events.
- B. Install the Amazon Kinesis Agent on the application server, configure it to monitor the log files, and send it to a Kinesis stream. Configure Kinesis to transform the data by using an AWS Lambda function, and forward events to Amazon ES for analysis. Use the Elasticsearch API for querying the data.
- C. Use the third-party file-input plugin Logstash to monitor the application log file, then use a custom dissect filter on the agent to parse the log entries into the JSON format. Output the events to Amazon ES to be searched. Use the Elasticsearch API for querying the data.
- D. Install the Amazon CloudWatch Logs agent on the application server and use CloudWatch Events rules to search logs for access events. Use Amazon CloudSearch as an interface to search for events.

**Answer: B**

#### NEW QUESTION # 339

You are designing an enterprise data storage system. Your data management software system requires mountable disks and a real filesystem, so you cannot use S3 for storage. You need persistence, so you will be using AWS EBS Volumes for your system. The system needs as low- cost storage as possible, and access is not frequent or high throughput, and is mostly sequential reads. Which is the most appropriate EBS Volume Type for this scenario?

- A. standard
- B. gp1
- C. io1
- D. gp2

**Answer: A**

Explanation:

standard volumes, or Magnetic volumes, are best for: Cold workloads where data is infrequently accessed, or scenarios where the lowest storage cost is important.

<http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/EBSVolumeTypes.html>

#### NEW QUESTION # 340

For AWS Auto Scaling, what is the first transition state an existing instance enters after leaving steady state in Standby mode?

- A. Terminating:Wait
- B. Detaching
- C. Pending
- D. EnteringStandby

**Answer: C**

Explanation:

You can put any instance that is in an InService state into a Standby state. This enables you to remove the instance from service, troubleshoot or make changes to it, and then put it back into service. Instances in a Standby state continue to be managed by the Auto Scaling group.

However, they are not an active part of your application until you put them back into service.
