

Amazon AWS-DevOps Test Centres | AWS-DevOps Test Online

The poster is for a course by Robusta Technology & Training. The title is 'Khóa học CƠ SỞ HẠ TẦNG CNTT CƠ BẢN (ITIL)'. It includes a 'THÔNG TIN KHAI GIẢNG' (Course Information) section with the following details: a checkmark icon followed by '08/11/2025', a checkmark icon followed by '8h30 - 17h30, Thứ 7 hằng tuần', and a checkmark icon followed by 'Online/Offline'. Below this is a blue button that says 'Đăng ký ngay' (Register now). At the bottom, there are two contact options: an email icon followed by 'learn@robusta.vn' and a phone icon followed by '(+84) 939 586 168'. The background features a dark blue theme with orange and white geometric shapes, including a large orange arc and a globe with network connections.

P.S. Free & New AWS-DevOps dumps are available on Google Drive shared by Braindumpsqa: https://drive.google.com/open?id=1X53H_m0OpYEOcGXuhde8wnN3dV1kLLQa

As the famous brand Braindumpsqa, even though we have been very successful we have never satisfied with the status quo, and always be willing to constantly update the contents of our AWS-DevOps exam torrent. Most important of all, as long as we have compiled a new version of the AWS-DevOps guide torrent, we will send the latest version of our AWS-DevOps Training Materials to our customers for free during the whole year after purchasing. We will continue to bring you integrated AWS-DevOps guide torrent to the demanding of the ever-renewing exam, which will help you pass the AWS-DevOps exam.

The AWS Certified DevOps Engineer – Professional or DOP-C01 exam focuses on DevOps engineers, developers, or any other specialist who is familiar with working with AWS software architecture.

To prepare for the AWS-DevOps-Engineer-Professional Certification Exam, candidates should have a strong understanding of DevOps practices and AWS services. They should also have hands-on experience in deploying and managing applications on AWS. Candidates can also take various training courses and practice exams to prepare for the certification exam. Overall, obtaining the AWS-DevOps-Engineer-Professional Certification is an excellent way for individuals to enhance their skills and validate their expertise in DevOps practices and AWS services.

AWS-DevOps Test Online - Top AWS-DevOps Dumps

Now passing AWS-DevOps exam is not easy, so choosing a good training tool is a guarantee of success to get the AWS-DevOps certificate. If you choose our AWS-DevOps exam materials, we will free update within one year after you purchase. That is to say we can ensure that we will provide you with exam information and exam practice questions and answers immediately. It can let you be fully prepared for exam, and almost have 100% pass rate of AWS-DevOps Exam. We can not only allow you for the first time to participate in AWS-DevOps exam to pass it successfully, but also help you save a lot of valuable. Don't miss such a good opportunity because of your hesitation.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q27-Q32):

NEW QUESTION # 27

Your finance supervisor has set a budget of 2000 USD for the resources in AWS. Which of the following is the simplest way to ensure that you know when this threshold is being reached.

- A. Use Cloudwatch logs to notify you when you reach the threshold value
- B. Use SQS queues to notify you when you reach the threshold value
- C. Use Cloudwatch events to notify you when you reach the threshold value
- **D. Use the Cloudwatch billing alarm to notify you when you reach the threshold value**

Answer: D

Explanation:

Explanation

The AWS documentation mentions

You can monitor your AWS costs by using Cloud Watch. With Cloud Watch, you can create billing alerts that notify you when your usage of your services exceeds thresholds that you define. You specify these threshold amounts when you create the billing alerts. When your usage exceeds these amounts, AWS sends you an email notification. You can also sign up to receive notifications when AWS prices change.

For more information on billing alarms, please refer to the below URL:

* <http://docs.aws.amazon.com/awsaccountbilling/latest/aboutv2/monitor-charges.html>

NEW QUESTION # 28

If you're trying to configure an AWS Elastic Beanstalk worker tier for easy debugging if there are problems finishing queue jobs, what should you configure?

- A. ConfigureEnhanced Health Reporting.
- B. ConfigureRolling Deployments.
- C. ConfigureBlue-Green Deployments.
- **D. Configure a Dead Letter Queue.**

Answer: D

Explanation:

Explanation

The AWS documentation mentions the following on dead-letter queues

Amazon SQS supports dead-letter queues. A dead-letter queue is a queue that other (source) queues can target for messages that can't be processed (consumed) successfully. You can set aside and isolate these messages in the dead-letter queue to determine why their processing doesn't succeed.

For more information on dead letter queues please visit the below link

<http://docs.aws.amazon.com/AWSSimpleQueueService/latest/SQSDeveloperGuide/sqs-dead-letter-queues.html>

NEW QUESTION # 29

A company is deploying a new application using Amazon EC2 instances. The company wants to maintain a centralized application and Amazon API logs that can be queried using one tool or service.

Which solution will meet these requirements?

- A. Use the Amazon CloudWatch agent to send logs from the Amazon EC2 instances to Amazon Kinesis. Configure AWS CloudTrail to deliver the API logs to Kinesis. Use Amazon to load the data into Amazon Redshift and use Amazon Redshift to query both log sets.
- B. Use the Amazon CloudWatch agent to send logs from the Amazon EC2 instances to CloudWatch. Configure AWS CloudTrail to deliver the API logs to CloudWatch and use Amazon Athena to query both log sets in CloudWatch.
- **C. Use the Amazon CloudWatch agent to send logs from the Amazon EC2 instances to Amazon S3. Use Amazon CloudTrail to deliver the API logs to Amazon S3 and use Amazon Redshift to query both log sets in Amazon S3.**
- D. Use the Amazon CloudWatch agent to send logs from the Amazon EC2 instances to CloudWatch. Configure an Amazon Kinesis Data Firehose log group subscription to send those logs to Amazon S3. Use AWS CloudTrail to deliver the API logs to Amazon S3. Use Amazon Athena to query both log sets in Amazon S3.

Answer: C

NEW QUESTION # 30

A company uses AWS KMS with CMKs and manual key rotation to meet regulatory compliance requirements. The security team wants to be notified when any keys have not been rotated after 90 days.

Which solution will accomplish this?

- A. Configure AWS Security Hub to publish to an Amazon SNS topic when keys are more than 90 days old.
- **B. Develop an AWS Config custom rule that publishes to an Amazon SNS topic when keys are more than 90 days old.**
- C. Configure AWS KMS to publish to an Amazon SNS topic when keys are more than 90 days old.
- D. Configure an Amazon CloudWatch Events event to launch an AWS Lambda function to call the AWS Trusted Advisor API and publish to an Amazon SNS topic.

Answer: B

NEW QUESTION # 31

A company wants to automatically re-create its infrastructure using AWS CloudFormation as part of the company's quality assurance (QA) pipeline. For each QA run, a new VPC must be created in a single account, resources must be deployed into the VPC, and tests must be run against this new infrastructure. The company policy states that all VPCs must be peered with a central management VPC to allow centralized logging. The company has existing CloudFormation templates to deploy its VPC and associated resources.

Which combination of steps will achieve the goal in a way that is automated and repeatable?

(Choose two.)

- A. Modify the CloudFormation template to include a mappings object that includes a list of /16 CIDR ranges for each account where the stack will be deployed.
- **B. Create an AWS Lambda function that is invoked by an Amazon CloudWatch Events rule when a CreateVpcPeeringConnection API call is made. The Lambda function should check the source of the peering request, accepts the request, and update the route tables for the management VPC to allow traffic to go over the peering connection.**
- C. In the CloudFormation template:
 - Use the Fn::Cidr function to allocate an unused CIDR range for the VPC and subnets.
 - Create a peering connection to the management VPC.
 - Update route tables to allow traffic to the management VPC.
- **D. In the CloudFormation template:**
 - **Invoke a custom resource to generate unique VPC CIDR ranges for the VPC and subnets.**
 - **Create a peering connection to the management VPC.**
 - **Update route tables to allow traffic to the management VPC.**
- E. Use CloudFormation StackSets to deploy the VPC and associated resources to multiple AWS accounts using a custom resource to allocate unique CIDR ranges.
Create peering connections from each VPC to the central management VPC and accept those connections in the management VPC.

Answer: B,D

Explanation:

<https://blog.irdeto.com/2017/10/11/how-to-implement-vpc-peering-between-2-vpcs-in-the-same-aws-account-using-cloudformation/>

NEW QUESTION # 32

.....

Our professionals constantly keep testing our AWS-DevOps vce dumps to make sure the accuracy of our exam questions and follow the latest exam requirement.
