Sharp tools make good work. Valid AWS-Solutions-Associate test questions and answers will make your exam easily. If you still feel difficult in passing exam, our products are suitable for you. AWS-Solutions-Associate test questions and answers are worked out by iPassleader professional experts who have more than 8 years in this field. With so many years' development, we can keep stable high passing rate for Amazon AWS-Solutions-Associate Exam. You will only spend dozens of money and 20-30 hours' preparation on our AWS-Solutions-Associate test questions, passing exam is easy for you.

The AWS Certified Solutions Architect - Associate (SAA-C02) certification exam is designed for individuals who have at least one year of experience in designing and deploying scalable, cost-effective, and fault-tolerant systems on AWS. It covers a range of topics, including AWS architecture, deployment, security, and troubleshooting. AWS-Solutions-Associate Exam is designed to test the candidate's knowledge and ability to apply AWS best practices and design principles to real-world scenarios.

Our AWS-Solutions-Associate valid study guide is edited by out IT professional experts and focus on providing you with the most updated study material for all of you. You will pass your AWS-Solutions-Associate actual test in your first attempt. With the help of Amazon AWS-Solutions-Associate Current Exam Content, you will be more confident and positive to face your coming test. After you get your AWS-Solutions-Associate certification, you will be getting close to your dream.

Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q341-Q346):

NEW QUESTION # 341

A large media site has multiple applications in Amazon ECS. A Solutions Architect needs to use content metadata and route traffic to specific services.

What is the MOST efficient method to perform this task?

- A. Use an AWS Application Load Balancer with host-based routing option to route traffic to the correct service.
- B. Use Amazon CloudFront to manage and route traffic to the correct service.
- C. Use an AWS Classic Load Balancer with a host-based routing option to route traffic to the correct service.
- D. Use the AWS CLI to update Amazon Route 53 hosted zone to route traffic as services get updated.

Answer: C

NEW QUESTION # 342

A solutions architect needs to design a managed storage solution for a company's application that includes high-performance machine learning. This application runs on AWS Fargate, and the connected storage needs to have concurrent access to files and deliver high performance. Which storage option should the solutions architect recommend?

- A. Create an Amazon Elastic Block Store (Amazon EBS) volume for the application and establish an IAM role that allows Fargate to communicate with Amazon EBS.
- B. Create an Amazon Elastic File System (Amazon EFS) file share and establish an IAM role that allows Fargate to communicate with Amazon EFS.
- **C. Create an Amazon FSx for Lustre file share and establish an IAM role that allows Fargate to communicate with FSx for Lustre.**
- D. Create an Amazon S3 bucket for the application and establish an IAM role for Fargate to communicate with Amazon S3.

Answer: C

NEW QUESTION # 343

A company has an event-driven application that invokes AWS Lambda functions up to 800 times each minute with varying runtimes. The Lambda functions access data that is stored in an Amazon Aurora MySQL DB cluster. The company is noticing connection timeouts as user activity increases. The database shows no signs of being overloaded. CPU, memory, and disk access metrics are all low.

Which solution will resolve this issue with the LEAST operational overhead?

- A. Add an Aurora Replica as a reader node. Configure the Lambda functions to connect to the reader endpoint of the DB cluster rather than to the writer endpoint.
- B. Set up Amazon ElastiCache for Redis to cache commonly read items from the database. Configure the Lambda functions to connect to ElastiCache for reads.
- C. Adjust the size of the Aurora MySQL nodes to handle more connections. Configure retry logic in the Lambda functions for attempts to connect to the database.
- **D. Use Amazon RDS Proxy to create a proxy. Set the DB cluster as the target database. Configure the Lambda functions to connect to the proxy rather than to the DB cluster.**

Answer: D

Explanation:

Explanation

1. database shows no signs of being overloaded. CPU, memory, and disk access metrics are all low => A and C out. We cannot only add nodes instance or add read replica, because database workload is totally fine, very low. 2. "least operational overhead" => B out, because B need to configure lambda. 3. RDS proxy: Shares infrequently used connections; High availability with failover; Drives increased efficiency => proxy can leverage failover to redirect traffic from timeout rds instance to healthy rds instance. So D is right.

NEW QUESTION # 344

A company has on-premises servers running a relational database. The current database serves high read traffic for users in different locations. The company wants to migrate to AWS with the least amount of effort. The database solution should support disaster recovery and not affect the company's current traffic flow.

Which solution meets these requirements?

- A. Use databases hosted on Amazon EC2 instances behind an Application Load Balancer in different Availability Zones
- **B. Use a database in Amazon RDS with Multi-AZ and at least one read replica**
- C. Use a database in Amazon RDS with Multi-AZ and at least one standby replica
- D. Use databases hosted on multiple Amazon EC2 instances in different AWS Regions

Answer: B

NEW QUESTION # 345

A company runs applications on AWS that connect to the company's Amazon RDS database. The applications scale on weekends and at peak times of the year. The company wants to scale the database more effectively for its applications that connect to the

database.

Which solution will meet these requirements with the LEAST operational overhead?

- A. Use a custom proxy that runs on Amazon EC2 as an intermediary to the database. Change the applications to use the custom proxy endpoint.
- **B. Use Amazon RDS Proxy with a target group for the database. Change the applications to use the RDS Proxy endpoint.**
- C. Use an AWS Lambda function to provide connection pooling with a target group configuration for the database. Change the applications to use the Lambda function.
- D. Use Amazon DynamoDB with connection pooling with a target group configuration for the database. Change the applications to use the DynamoDB endpoint.

Answer: B

Explanation:

Amazon RDS Proxy is a fully managed, highly available database proxy for Amazon Relational Database Service (RDS) that makes applications more scalable, more resilient to database failures, and more secure¹. RDS Proxy allows applications to pool and share connections established with the database, improving database efficiency and application scalability². RDS Proxy also reduces failover times for Aurora and RDS databases by up to 66% and enables IAM authentication and Secrets Manager integration for database access¹. RDS Proxy can be enabled for most applications with no code changes².

NEW QUESTION # 346

.....

iPassleader provides the most reliable and authentic AWS Certified Solutions Architect - Associate (SAA-C02) (AWS-Solutions-Associate) prep material there is. The 3 kinds of Amazon AWS-Solutions-Associate preparation formats ensure that there are no lacking points in a student when he attempts the actual AWS-Solutions-Associate exam. The AWS Certified Solutions Architect - Associate (SAA-C02) (AWS-Solutions-Associate) exam registration fee varies between 100\$ and 1000\$, and a candidate cannot risk wasting his time and money, thus we ensure your success if you study from the updated Amazon AWS-Solutions-Associate practice material. We offer the demo version of the actual Amazon AWS-Solutions-Associate questions so that you may confirm the validity of the product before actually buying it, preventing any sort of regret.
