When you follow with our AWS-Solutions-Associate exam questions to prepare for your coming exam, you will be deeply touched by the high-quality and high-efficiency. Carefully devised by the professionals who have an extensive research of the AWS-Solutions-Associate exam and its requirements, our AWS-Solutions-Associate study braindumps are a real feast for all the candidates. And if you want to have an experience with our AWS-Solutions-Associate learning guide, you can free download the demos on our website.

There is always a fear of losing the AWS-Solutions-Associate exam and this causes you may lose your money and waste the time. There is no such issue if you study our AWS-Solutions-Associate exam questions. Your money and exam attempt is bound to award you a sure and definite success if you study with our AWS-Solutions-Associate Study Guide to prepare for the exam. According to our data, our pass rate of the AWS-Solutions-Associate practice engine is high as 98% to 100%. So if you choose our AWS-Solutions-Associate learning quiz, you will pass for sure.

## AWS-Solutions-Associate Latest Study Guide & Actual AWS-Solutions-Associate Test Pdf

We have the AWS-Solutions-Associate bootcamp, it aims at helping you increase the pass rate, the pass rate of our company is 98%, we can ensure that you can pass the exam by using the AWS-Solutions-Associate bootcamp. We have knowledge point as well as the answers to help you finish the training materials, if you like, it also has the offline version, so that you can continue the study at anytime

## Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q646-Q651):

### NEW QUESTION # 646

A company is using a tape backup solution to store its key application data offsite. The daily data volume is around 50 TB. The company needs to retain the backups for 7 years for regulatory purposes. The backups are rarely accessed and a week's notice is typically given if a backup needs to be restored. The company is now considering a cloud-based option to reduce the storage costs and operational burden of managing tapes. The company also wants to make sure that the transition (from tape backups to the cloud) minimizes disruptions. Which storage solution is MOST cost-effective?

- A. Use Amazon Storage Gateway to back up to Amazon Glacier Deep Archive
- B. Use AWS Snowball Edge to directly integrate the backups with Amazon S3 Glacier.
- C. Copy the backup data to Amazon S3 and create a lifecycle policy to move the data to Amazon S3 Glacier
- D. Use Amazon Storage Gateway to back up to Amazon S3 and create a lifecycle policy to move the backup to Amazon S3 Glacier

**Answer: B**

#### NEW QUESTION # 647

An ecommerce company runs applications in AWS accounts that are part of an organization in AWS Organizations. The applications run on Amazon Aurora PostgreSQL databases across all the accounts. The company needs to prevent malicious activity and must identify abnormal failed and incomplete login attempts to the databases. Which solution will meet these requirements in the MOST operationally efficient way?

- A. Enable the Amazon RDS Protection feature in Amazon GuardDuty for the member accounts of the organization
- **B. Publish the Aurora general logs to a log group in Amazon CloudWatch Logs. Export the log data to a central Amazon S3 bucket**
- C. Attach service control policies (SCPs) to the root of the organization to identify the failed login attempts
- D. Publish all the Aurora PostgreSQL database events in AWS CloudTrail to a central Amazon S3 bucket

**Answer: B**

Explanation:

This option is the most operationally efficient way to meet the requirements because it allows the company to monitor and analyze the database login activity across all the accounts in the organization. By publishing the Aurora general logs to a log group in Amazon CloudWatch Logs, the company can enable the logging of the database connections, disconnections, and failed authentication attempts. By exporting the log data to a central Amazon S3 bucket, the company can store the log data in a durable and cost-effective way and use other AWS services or tools to perform further analysis or alerting on the log data. For example, the company can use Amazon Athena to query the log data in Amazon S3, or use Amazon SNS to send notifications based on the log data.

A). Attach service control policies (SCPs) to the root of the organization to identify the failed login attempts.

This option is not effective because SCPs are not designed to identify the failed login attempts, but to restrict the actions that the users and roles can perform in the member accounts of the organization. SCPs are applied to the AWS API calls, not to the database login attempts. Moreover, SCPs do not provide any logging or analysis capabilities for the database activity.

B). Enable the Amazon RDS Protection feature in Amazon GuardDuty for the member accounts of the organization. This option is not optimal because the Amazon RDS Protection feature in Amazon GuardDuty is not available for Aurora PostgreSQL databases, but only for Amazon RDS for MySQL and Amazon RDS for MariaDB databases. Moreover, the Amazon RDS Protection feature does not monitor the database login attempts, but the network and API activity related to the RDS instances.

D). Publish all the Aurora PostgreSQL database events in AWS CloudTrail to a central Amazon S3 bucket.

This option is not sufficient because AWS CloudTrail does not capture the database login attempts, but only the AWS API calls made by or on behalf of the Aurora PostgreSQL database. For example, AWS CloudTrail can record the events such as creating, modifying, or deleting the database instances, clusters, or snapshots, but not the events such as connecting, disconnecting, or failing to authenticate to the database.

#### NEW QUESTION # 648

A company runs analytics software on Amazon EC2 instances. The software accepts job requests from users to process data that has been uploaded to Amazon S3. Users report that some submitted data is not being processed. Amazon CloudWatch reveals that the EC2 instances have a consistent CPU utilization at or near

100%. The company wants to improve system performance and scale the system based on user load. What should a solutions architect do to meet these requirements?

- A. Create an S3 VPC endpoint for Amazon S3. Update the software to reference the endpoint.
- B. Route incoming requests to Amazon Simple Queue Service (Amazon SQS). Configure an EC2 Auto Scaling group based on queue size. Update the software to read from the queue.
- C. Stop the EC2 instances. Modify the instance type to one with a more powerful CPU and more memory. Restart the instances.
- **D. Create a copy of the instance. Place all instances behind an Application Load Balancer.**

**Answer: D**

#### NEW QUESTION # 649

A company is using AWS Key Management Service (AWS KMS) to secure their Amazon RDS databases. An auditor has recommended that the company log all use of their AWS KMS keys. What is the SIMPLEST solution?

- A. Poll AWS KMS periodically with a scheduled job
- **B. Use AWS CloudTrail to log AWS KMS key usage.**
- C. Associate AWS KMS metrics with Amazon CloudWatch
- D. Deploy a monitoring agent on the RDS instances

**Answer: B**

#### NEW QUESTION # 650

A solution architect needs to design a highly available application consisting of web, application, and database tiers. HTTPS content delivery should be as close to the edge as possible, with the least delivery time. Which solution meets these requirements and is MOST secure?

- A. Configure a public Application Load Balancer (ALB) with multiple redundant Amazon EC2 instances in public subnets. Configure Amazon CloudFront to deliver HTTPS content using the public ALB as the origin.
- B. Configure a public Application Load Balancer (ALB) with multiple redundant Amazon EC2 instances in private subnets. Configure Amazon CloudFront to deliver HTTPS content using the public ALB as the origin.
- **C. Amazon EC2 instances in private subnets. Configure a public Application Load Balancer with multiple redundant Amazon CloudFront to deliver HTTPS content using the EC2 instances as the origin.**
- D. Configure a public Application Load Balancer with multiple redundant Amazon EC2 instances in public subnets. Configure Amazon CloudFront to deliver HTTPS content using the EC2 instances as the origin.

**Answer: C**

#### NEW QUESTION # 651

.....

The AWS Certified Solutions Architect - Associate (SAA-C02) (AWS-Solutions-Associate) certification examination is an essential component of professional development, and passing this Amazon AWS-Solutions-Associate test can increase career options and a rise in salary. Nonetheless, getting ready for the Prepare for your AWS-Solutions-Associate Exam may be difficult, and many working professionals have trouble locating the AWS-Solutions-Associate practice questions they need to succeed in this endeavor.
