

Amazon DOP-C01 Exam | New DOP-C01 Test Price - Free Download of DOP-C01 Exam Products

P.S. Free 2025 Amazon DOP-C01 dumps are available on Google Drive shared by Pass4sureCert: <https://drive.google.com/open?id=1YpClnlZNShhCnDyO2N9T0zhdOdJKqDoh>

Compared to other products in the industry, DOP-C01 actual exam have a higher pass rate. If you really want to pass the exam, this must be the one that makes you feel the most. Our company guarantees this pass rate from various aspects such as content and service. Of course, we also consider the needs of users, DOP-C01 Exam Questions hope to help every user realize their dreams. The 99% pass rate of our DOP-C01 study guide is a very proud result for us. Buy DOP-C01 study guide now and we will help you. Believe it won't be long before, you are the one who succeeded!

The AWS Certified DevOps Engineer - Professional (DOP-C01) exam is a challenging and rigorous certification that tests the candidate's ability to design, deploy and manage DevOps systems and processes in the AWS environment. It is a valuable certification for professionals who are looking to advance their careers in DevOps and for organizations that want to ensure that they are implementing AWS services in accordance with best practices.

Pass4sureCert provides free new Amazon DOP-C01 latest exam dumps pdf demo to download for your reference so that you will share risk free shopping. Also we encourage every buyer use PayPal payment which also guarantees your money safety. We are engaging in not only providing the highest quality of DOP-C01 Latest Exam Dumps pdf but also the satisfying customer service. If you have any doubt, we will solve for you until you are satisfied.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q268-Q273):

NEW QUESTION # 268

A company recently launched an application that is more popular than expected. The company wants to ensure the application can scale to meet increasing demands and provide reliability using multiple Availability Zones (AZs) The application runs on a fleet of

Amazon EC2 instances behind an Application Load Balancer (ALB) A DevOps engineer has created an Auto Scaling group across multiple AZs for the application. Instances launched in the newly added AZs are not receiving any traffic for the application. What is likely causing this issue?

- A. The ALB should be replaced with a Network Load Balancer (NLB).
- B. Auto Scaling groups can create new instances in a single AZ only.
- **C. The new AZ has not been added to the ALB**
- D. The EC2 instances have not been manually associated to the ALB

Answer: C

NEW QUESTION # 269

A company wants to use Amazon DynamoDB for maintaining metadata on its forums. See the sample data set in the image below.

ForumName	Subject	LastPostDateTime	Thread
"S3"	"aaa"	"2015-03-15:17:24:31"	12
"S3"	"bbb"	"2015-01-22:23:18:01"	3
"S3"	"ccc"	"2015-02-31:13:14:21"	4
"S3"	"ddd"	"2015-01-03:09:21:11"	9
"EC2"	"yyy"	"2015-02-12:11:07:56"	18
"EC2"	"zzz"	"2015-01-18:07:33:42"	0
"RDS"	"mmm"	"2015-01-19:01:13:24"	3
"RDS"	"sss"	"2015-03-11:06:53:00"	11
"RDS"	"ttt"	"2015-10-22:12:19:44"	5

A DevOps Engineer is required to define the table schema with the partition key, the sort key, the local secondary index, projected attributes, and fetch operations. The schema should support the following example searches using the least provisioned read capacity units to minimize cost.

- Search within ForumName for items where the subject starts with 'a'.
- Search forums within the given LastPostDateTime time frame.
- Return the thread value where LastPostDateTime is within the last three months.

Which schema meets the requirements?

- A. Use Subject as the primary key and ForumName as the sort key. Have LSI with LastPostDateTime as the sort key and fetch operations for thread.
- **B. Use ForumName as the primary key and Subject as the sort key. Have LSI with LastPostDateTime as the sort key and the projected attribute thread.**
- C. Use Subject as the primary key and ForumName as the sort key. Have LSI with Thread as the sort key and fetch operations for LastPostDateTime.
- D. Use ForumName as the primary key and Subject as the sort key. Have LSI with Thread as the sort key and the projected attribute LastPostDateTime.

Answer: B

Explanation:

<https://docs.aws.amazon.com/amazondynamodb/latest/developerguide/LSI.html> project the Replies attribute, sort key (Subject), local secondary indexes on non-key attributes LastPostDateTime.

NEW QUESTION # 270

What is the maximum time messages can be stored in SQS?

- A. 7 days
- **B. 14 days**
- C. 4 days
- D. one month

Answer: B

Explanation:

A message can be stored in the Simple Queue Service (SQS) from 1 minute up to a maximum of 14 days.

NEW QUESTION # 271

As part of your continuous deployment process, your application undergoes an I/O load performance test before it is deployed to production using new AMIs.

The application uses one Amazon Elastic Block Store (EBS) PIOPS volume per instance and requires consistent I/O performance. Which of the following must be carried out to ensure that I/O load performance tests yield the correct results in a repeatable manner?

- **A. Ensure that the Amazon EBS volumes have been pre-warmed by reading all the blocks before the test.**
- B. Ensure that snapshots of the Amazon EBS volumes are created as a backup.
- C. Ensure that the I/O block sizes for the test are randomly selected.
- D. Ensure that the Amazon EBS volume is encrypted.
- E. Ensure that the Amazon EBS volume has been pre-warmed by creating a snapshot of the volume before the test.

Answer: A

NEW QUESTION # 272

You have an application consisting of a stateless web server tier running on Amazon EC2 instances behind load balancer, and are using Amazon RDS with read replicas. Which of the following methods should you use to implement a self-healing and cost-effective architecture? Choose 2 answers from the options given below

- A. Use a larger Amazon EC2 instance type for the web server tier and a larger DB instance type for the data storage layer to ensure that they don't become unhealthy.
- B. Set up an Auto Scaling group for the web server tier along with an Auto Scaling policy that uses the Amazon RDS DB CPU utilization Cloud Watch metric to scale the instances.
- C. Set up scripts on each Amazon EC2 instance to frequently send ICMP pings to the load balancer in order to determine which instance is unhealthy and replace it.
- **D. Use an Amazon RDS Multi-AZ deployment.**
- E. Set up a third-party monitoring solution on a cluster of Amazon EC2 instances in order to emit custom Cloud Watch metrics to trigger the termination of unhealthy Amazon EC2 instances.
- **F. Set up an Auto Scaling group for the web server tier along with an Auto Scaling policy that uses the Amazon EC2 CPU utilization CloudWatch metric to scale the instances.**
- G. Set up an Auto Scaling group for the database tier along with an Auto Scaling policy that uses the Amazon RDS read replica lag CloudWatch metric to scale out the Amazon RDS read replicas.

Answer: D,F

Explanation:

The scaling of EC2 Instances in the Autoscaling group is normally done with the metric of the CPU utilization of the current instances in the Autoscaling group

For more information on scaling in your Autoscaling Group, please refer to the below link:

* <http://docs.aws.amazon.com/autoscaling/latest/userguide/as-scaling-simple-step.html>

Amazon RDS Multi-AZ deployments provide enhanced availability and durability for Database (DB) Instances, making them a natural fit for production database workloads. When you provision a Multi-AZ DB Instance, Amazon RDS automatically creates a primary DB Instance and synchronously replicates the data to a standby instance in a different Availability Zone (AZ). Each AZ runs on its own physically distinct, independent infrastructure, and is engineered to be highly reliable. In case of an infrastructure failure, Amazon RDS performs an automatic failover to the standby or to a read replica in the case of Amazon Aurora, so that you can resume database operations as soon as the failover is complete. For more information on RDS Multi-AZ please refer to the below link:

<https://aws.amazon.com/rds/details/multi-az/>

Option A is invalid because if you already have in-built metrics from Cloudwatch, why would you want to spend more in using a third-party monitoring solution.

Option B is invalid because health checks are already a feature of AWS CLB

Option C is invalid because the database CPU usage should not be used to scale the web tier.

Option D is invalid because increasing the instance size does not always guarantee that the solution will not become unhealthy.

Option F is invalid because increasing Read-Replica's will not suffice for write operations if the primary DB fails.

NEW QUESTION # 273

.....

In order to let you have a general idea about our DOP-C01 test engine, we have prepared the free demo in our website. The contents in our free demo are part of the DOP-C01 real materials in our study engine. We are confident enough to give our customers a chance to test our DOP-C01 Preparation materials for free before making their decision. You are really welcomed to download the free demo in our website to have the firsthand experience, and then you will find out the unique charm of our DOP-C01 actual exam by yourself.
