SOA-C02 Pdf Files, Online SOA-C02 Bootcamps

To find the perfect SOA-C02 practice materials for the exam, you search and re-search without reaching the final decision and compare advantages and disadvantages with materials in the market. With systemic and methodological content within our SOA-C02 practice materials, they have helped more than 98 percent of exam candidates who chose our SOA-C02 guide exam before getting the final certificates successfully.

The SOA-C02 exam is intended for system administrators, DevOps engineers, and IT professionals who are responsible for managing and maintaining AWS systems. Candidates who pass SOA-C02 exam will receive the AWS Certified SysOps Administrator - Associate certification, which demonstrates their proficiency in AWS services and technologies.

To become certified, candidates are required to have a minimum of one year of experience in AWS operations, including monitoring, logging, and troubleshooting. They must also have a solid understanding of AWS infrastructure, security, and compliance. SOA-C02 Exam consists of 65 multiple-choice and multiple-response questions, which must be completed within 130 minutes. The passing score for the exam is 720 out of 1,000 points. Successful candidates will receive the AWS Certified SysOps Administrator - Associate (SOA-C02) certification, which is valid for two years. AWS Certified SysOps Administrator - Associate (SOA-C02) certification is recognized globally and can help individuals advance their careers in cloud computing and AWS operations.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q667-Q672):

NEW QUESTION # 667

A company uses an Amazon S3 bucket to store data files. The S3 bucket contains hundreds of objects. The company needs to replace a tag on all the objects in the S3 bucket with another tag.

What is the MOST operationally efficient way to meet this requirement?

- A. Use the AWS CLI to copy the objects to another S3 bucket. Add the new tag to the copied objects. Delete the original objects.
- B. Use the AWS CLI to get the tags for each object. Save the tags in a list. Use the AWS CLI and the list to remove the object tags. Use the AWS CLI and the list to retag the objects.
- C. Use the AWS CLI to get the tags for each object. Save the tags in a list. Use S3 Batch Operations. Specify the operation to delete all object tags. Use the AWS CLI and the list to retag the objects.
- **D. Use S3 Batch Operations. Specify the operation to replace all object tags.**

Answer: D

Explanation:

Ref. <https://aws.amazon.com/es/blogs/storage/adding-and-removing-object-tags-with-s3-batch-operations/> Amazon S3 Batch Operations is a feature that lets you perform large-scale batch operations on S3 objects. It is the most operationally efficient way to replace a tag on all objects in an S3 bucket.

* Create an S3 Batch Operations Job:

* Open the Amazon S3 console at Amazon S3 Console.

* Navigate to Batch Operations and create a new job.

* Specify the Operation:

* Choose the operation to replace all object tags.

* Provide a manifest that lists the objects in the bucket. You can generate this manifest using an S3 inventory report.

* Execute the Job:

* Review the job configuration and submit it.

* Monitor the job execution to ensure all tags are replaced as specified.

Using S3 Batch Operations automates the process and minimizes manual effort.

Tagging Amazon S3 Objects

NEW QUESTION # 668

A company plans to migrate several of its high performance computing (HPC) virtual machines (VMs) to Amazon EC2 instances on AWS. A SysOps administrator must identify a placement group for this deployment. The strategy must minimize network latency and must maximize network throughput between the HPC VMs.

Which strategy should the SysOps administrator choose to meet these requirements?

- A. Deploy the instances in a spread placement group in two Availability Zones
- **B. Deploy the instances in a cluster placement group in one Availability Zone.**
- C. Deploy the instances in a partition placement group in one Availability Zone
- D. Deploy the instances in a partition placement group in two Availability Zones

Answer: B

NEW QUESTION # 669

A SysOps administrator creates an Amazon Elastic Kubernetes Service (Amazon EKS) cluster that uses AWS Fargate. The cluster is deployed successfully. The SysOps administrator needs to manage the cluster by using the kubectl command line tool. Which of the following must be configured on the SysOps administrator's machine so that kubectl can communicate with the cluster API server?

- A. The eks-connector.yaml file
- B. The kube-proxy Amazon EKS add-on
- **C. The kubeconfig file**
- D. The Fargate profile

Answer: C

Explanation:

NEW QUESTION # 670

A SysOps administrator is responsible for a large fleet of Amazon EC2 instances and must know whether any instances will be affected by upcoming hardware maintenance. Which option would provide this information with the LEAST administrative overhead?

- **A. Review the AWS Personal Health Dashboard**
- B. List any instances with failed system status checks using the AWS Management Console
- C. Deploy a third-party monitoring solution to provide real-time EC2 instance monitoring
- D. Monitor AWS CloudTrail for StopInstances API calls

Answer: A

Explanation:

The AWS Personal Health Dashboard provides a personalized view into the performance and availability of the AWS services underlying your AWS resources. It can alert you about upcoming hardware maintenance that could affect your EC2 instances.

* Access AWS Personal Health Dashboard:

* Open the AWS Personal Health Dashboard at AWS Personal Health Dashboard.

* View Service Health:

* The dashboard shows a list of recent events, including upcoming scheduled maintenance that might impact your EC2 instances.

* You can filter events to view those that specifically affect your EC2 instances.

* Set Up Notifications:

* You can configure AWS CloudWatch Events or Amazon SNS to send notifications based on Personal Health Dashboard events.

References:

* AWS Personal Health Dashboard

* Monitoring AWS Health Events with Amazon CloudWatch Events

NEW QUESTION # 671

A company recently moved its server infrastructure to Amazon EC2 instances. The company wants to use Amazon CloudWatch Logs to track the instance logs.

What should a SysOps administrator do to meet this requirement in compliance with AWS best practices?

- A. Install and configure the CloudWatch agent on the instances. Attach an IAM user to allow the instances to write logs to CloudWatch
- B. Configure CloudWatch from the AWS Management Console for the instances. Wait for AWS to automatically install and configure the agents for the instances
- C. Install and configure the CloudWatch agent on the instances. Attach the necessary security groups to allow the instances to write logs to CloudWatch
- **D. Install and configure the CloudWatch agent on the instances. Attach an IAM role to allow the instances to write logs to CloudWatch**

Answer: D

NEW QUESTION # 672
