Analytics-Admn-201 valid test questions & Analytics-Admn-201 free download dumps & Analytics-Admn-201 reliable study torrent

The simplified information contained in our Analytics-Admn-201 training guide is easy to understand without any difficulties. And our Analytics-Admn-201 practice materials enjoy a high reputation considered as the most topping practice materials in this career for the merit of high-effective. A great number of candidates have already been benefited from them. So what are you waiting for? Come to have a try on our Analytics-Admn-201 Study Materials and gain your success!

Our company has employed a lot of leading experts in the field to compile the Salesforce Certified Tableau Server Administrator exam question. Our system of team-based working is designed to bring out the best in our people in whose minds and hands the next generation of the best Analytics-Admn-201 exam torrent will ultimately take shape. Our company has a proven track record in delivering outstanding after sale services and bringing innovation to the guide torrent. I believe that you already have a general idea about the advantages of our Salesforce Certified Tableau Server Administrator exam question, but now I would like to show you the greatest strength of our Analytics-Admn-201 Guide Torrent --the highest pass rate. According to the statistics, the pass rate among our customers who prepared the exam under the guidance of our Analytics-Admn-201 guide torrent has reached as high as 98% to 100% with only practicing our Analytics-Admn-201 exam torrent for 20 to 30 hours.

Analytics-Admn-201 Reliable Braindumps - Pass Guaranteed 2026 Analytics-Admn-201: First-grade Salesforce Certified Tableau Server Administrator Free Dump Download

Actually, most people do not like learning the boring knowledge. It is hard to understand if our brain rejects taking the initiative. Now, our company has researched the Analytics-Admn-201 practice guide, a kind of high efficient learning tool. Firstly, we have deleted all irrelevant knowledge, which decreases your learning pressure. Secondly, the displays of the Analytics-Admn-201 Study Materials are varied to cater to all fo your different study interest and hobbies. It is interesting to study with our Analytics-Admn-201 exam questions.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 2	• Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 3	• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 4	• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 5	• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.

Salesforce Certified Tableau Server Administrator Sample Questions (Q55-Q60):

NEW QUESTION # 55
A user published a workbook ten days ago. The user can see the workbook on the Server, but she is unable to find the workbook by using Search. What should you do to resolve the problem?

- A. Instruct the user to add tags to the workbook
- B. Run the tsm maintenance reindex-search command
- C. Instruct the user to log out, and then log back in
- D. Instruct the user to re-publish the workbook with keywords

Answer: B

Explanation:
Tableau Server's search functionality relies on an indexed catalog of content (workbooks, data sources, etc.) stored in the Repository. If a user can see a workbook in the UI (e.g., under Content > Workbooks) but not find it via search, the search index may be outdated or corrupted. This can happen due to:
* Indexing delays after publishing.
* Server maintenance or crashes affecting the index.
* Option D (Run the tsm maintenance reindex-search command): Correct. This command rebuilds the search index, ensuring all content (including the user's workbook) is properly cataloged and searchable. Steps:
* Stop Tableau Server (tsm stop).
* Run tsm maintenance reindex-search.
* Start Tableau Server (tsm start).This is a server administrator task and resolves systemic search issues.
* Option A (Re-publish the workbook with keywords): Incorrect. Re-publishing might update the index for that workbook, but it doesn't fix a broader indexing problem. Keywords enhance relevance, not indexing itself.
* Option B (Add tags to the workbook): Incorrect. Tags improve searchability but don't address an index failure. If the workbook isn't indexed, tags won't help.
* Option C (Log out, and then log back in): Incorrect. This refreshes the user session but doesn't affect the server-side search index.
Why This Matters: A reliable search index is critical for content discovery in large deployments-reindex- search ensures consistency.
Reference: Tableau Server Documentation - "Reindex Search" (https://help.tableau.com/current/server/en-us/cli_maintenance_tsm.htm#reindex-search).

NEW QUESTION # 56
Which three types of authentications can be used with user-based licensing? (Choose three.)

- A. Active Directory
- B. Trusted authentication
- C. Reliance authentication
- D. Local authentication

Answer: A,B,D

Explanation:
Tableau Server's user-based licensing (Creator, Explorer, Viewer) ties licenses to individual users-let's determine compatible authentication methods:
* User-Based Licensing:
* Licenses are assigned per user, tracked by username.
* Authentication determines how users log in-must integrate with licensing.
* Option A (Local authentication): Correct.
* Details: Users are managed in Tableau Server's internal database-username/password set manually or via import.
* Why: Directly ties to user accounts, fully compatible with licensing.
* Option C (Trusted authentication): Correct.
* Details: Allows external apps to authenticate users via tickets (e.g., /trusted/<ticket>).
* Why: Maps to Tableau usernames, integrating with licensing-common for embedded analytics.
* Config: Trusted IPs or credentials set in TSM.
* Option D (Active Directory): Correct.
* Details: Uses AD for authentication (LDAP or Kerberos)-users sync to Tableau Server.
* Why: AD usernames align with licensing-supports SSO and user management.
* Config: Enable via tsm authentication active-directory configure.
* Option B (Reliance authentication): Incorrect.
* Why: Not a recognized Tableau authentication method-likely a typo (e.g., for "Resilience" or misheard term). No such feature exists.
Why This Matters: Authentication flexibility ensures user-based licensing fits diverse IT environments- critical for adoption.
Reference: Tableau Server Documentation - "Authentication" (https://help.tableau.com/current/server/en-us/auth_overview.htm), "Licensing Overview" (https://help.tableau.com/current/server/en-us/license_usage.

htm).

NEW QUESTION # 57

What two types of users can sign in to Tableau Server and edit the permissions for a workbook in a project, when permissions are NOT set to Locked to the project? (Choose two.)

- A. Users that have the workbook Interactor role
- B. Users set to Project Leader for the workbook's project
- C. The workbook's owner
- D. Users that have the project and workbook Viewer role

Answer: B,C

Explanation:
Editing permissions on a workbook in Tableau Server depends on the user's role and the project's permission settings. Since permissions are not locked (i.e., "Managed by Owner"), let's dissect who can edit them:
* Permission Model:
* Not Locked: Owners of content (workbooks, data sources) can set permissions, and Project Leaders can override at the project level.
* Site Roles: Define maximum capabilities (e.g., Viewer, Explorer, Creator).
* Capabilities: "Set Permissions" is explicit-only certain users get it.
* Option C (The workbook's owner): Correct.
* Details: The owner (typically the publisher) has full control over their workbook when permissions are Managed by Owner:
* How: In the UI, go to Content > Workbooks > Actions > Permissions-owners can edit rules (e.g., grant Editor to a group).
* Site Role: Minimum of Explorer (can publish) or Creator to publish, ensuring "Set Permissions" capability.
* Why: Ownership inherently includes permission management unless locked.
* Option D (Users set to Project Leader for the workbook's project): Correct.
* Details: Project Leaders are assigned via Content > Projects > Actions > Permissions > Set Project Leader:
* Power: Can edit permissions for all content in the project, even if not the owner.
* Site Role: Requires Site Administrator or Server Administrator (Creator/Explorer variants suffice).
* Why: Overrides ownership in Managed by Owner mode-ensures project-level governance.
* Option A (Users with project and workbook Viewer role): Incorrect.
* Why: Viewer role (site-level) limits users to viewing-lacks "Set Permissions" capability, regardless of project/workbook rules.
* Option B (Users with workbook Interactor role): Incorrect.
* Why: "Interactor" isn't a standard role-likely a misnomer for Explorer or Viewer with interaction permissions (e.g., Filter). No permission-editing rights exist here.
Why This Matters: Knowing who can edit permissions prevents access control gaps-crucial for collaborative or regulated environments.
Reference: Tableau Server Documentation - "Permissions" (https://help.tableau.com/current/server/en-us
/permissions.htm), "Project Leader Permissions" (https://help.tableau.com/current/server/en-us
/permissions_project_leader.htm).

NEW QUESTION # 58

What should you use to set a preferred active repository?

- A. The TSM browser client's Configuration Topology page
- B. The TSM browser client's Maintenance page
- C. A tabcmd set command
- D. A tsm configuration set command

Answer: D

Explanation:
Tableau Server uses a PostgreSQL database as its repository to store metadata, user information, and permissions. In a high-availability (HA) setup with multiple nodes, there are typically two repository instances: one active and one passive. The "preferred active repository" refers to designating which repository instance should take priority as the active one. This is managed through Tableau Services Manager (TSM).
The correct method to set the preferred active repository is by using the tsm configuration set command.
Specifically, you would use a command like:

tsm configuration set -k pgsql.preferred_host -v <hostname>

This command allows an administrator to specify the preferred host for the active repository, ensuring control over which node takes precedence in an HA environment.

Option B (tabcmd set command) is incorrect because tabcmd is a command-line utility primarily used for administrative tasks like managing users, groups, and content (e.g., publishing workbooks), not for configuring server topology or repository settings.

Option C (TSM browser client's Maintenance page) is incorrect because the Maintenance page in the TSM web interface is used for tasks like backups, restores, and cleanup, but it does not provide an option to set the preferred active repository.

Option D (TSM browser client's Configuration Topology page) is partially relevant since the Topology page displays the current configuration of services across nodes, including the repository. However, it does not allow direct modification of the preferred active repository; this must be done via the tsm command line.

Reference: Tableau Server Documentation - "Configure Tableau Server Repository" (https://help.tableau.com /current/server/en-us/repository.htm) and "TSM Command Line Reference" (https://help.tableau.com/current /server/en-us/cli_configuration_set.htm).

NEW QUESTION # 59

You need to ensure that Tableau Server requires the setup of a new administrator account the next time you attempt to log in. What should you do?

- A. Edit tabsvc.yml
- B. Run the tsm register command
- C. Reinstall Tableau Server
- D. Run the tsm reset command

Answer: D

Explanation:

To force Tableau Server to require the setup of a new administrator account (e.g., resetting the server to an initial setup state), the tsm reset command is the appropriate tool. This command resets Tableau Server's administrative configuration, including the TSM administrator account, while preserving content like workbooks and data sources.

Option B (Run the tsm reset command): Correct. Running tsm reset clears the current TSM administrator credentials and configuration settings. The next time you access TSM (e.g., via the web interface or CLI), it prompts you to set up a new administrator account, mimicking the initial setup process. Command: tsm reset -- username <new-username> --password <new-password>.

Option A (Edit tabsvc.yml): Incorrect. The tabsvc.yml file contains service configuration data, but manually editing it is not supported or recommended for resetting the administrator account. It could also corrupt the installation.

Option C (Run the tsm register command): Incorrect. The tsm register command is used to register Tableau Server with a new product key or identity store, not to reset the administrator account.

Option D (Reinstall Tableau Server): Incorrect. Reinstallation wipes the entire server, including content, and is overkill for this task. The tsm reset command achieves the goal without data loss.

Reference: Tableau Server Documentation - "TSM Reset Command" (https://help.tableau.com/current/server /en-us/cli_reset.htm).

NEW QUESTION # 60

......

Analytics-Admn-201 exam study material have a 99% pass rate. What does this mean? As long as you purchase Analytics-Admn-201 exam simulating and you are able to persist in your studies, you can basically pass the exam. This passing rate is not what we say out of thin air. This is the value we obtained from analyzing all the users' exam results. It can be said that choosing Analytics-Admn-201 study engine is your first step to pass the exam. If your job is very busy and there is not much time to specialize, and you are very eager to get a certificate to prove yourself, it is very important to choose our Analytics-Admn-201 Exam simulating. I know that the 99% pass rate of Analytics-Admn-201 exam must have attracted you. Do not hesitate anymore. You will never regret buying Analytics-Admn-201 study engine!
