

Analytics-Con-301 Fragen Und Antworten & Analytics-Con-301 Musterprüfungsfragen

 Bild von Fragen und Antworten mit Text hinzufügen

Heute steigert sich alles außer dem Gehalt sehr schnell. Wollen Sie nicht einen Durchbruch machen? Sie können Ihr Gehalt verdoppeln. Das ist sehr wahrscheinlich. Wenn Sie nur die Salesforce Analytics-Con-301 Zertifizierungsprüfung bestehen können, können Sie bekommen, wie Sie wollen. Die Dumps von PrüfungFrage wird Ihnen helfen, die Salesforce Analytics-Con-301 Prüfung 100% zu bestehen, was uns sehr wundert. Das ist echt, Sie sollen keine Zweifel haben.

Salesforce Analytics-Con-301 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Data Analysis: This domain targets Tableau Consultants to plan and prepare data connections effectively. It includes recommending data transformation strategies, designing row-level security (RLS) data structures, and implementing advanced data connections such as Web Data Connectors and Tableau Bridge. Skills in specifying granularity and aggregation strategies for data sources across Tableau products are emphasized.
Thema 2	• Data Visualization: This section evaluates the Tableau Consultant's ability to design effective visual analytics solutions. It involves creating dashboards and visual reports that enhance user understanding, employing techniques like dynamic actions and advanced chart types, and ensuring performance optimization for an interactive user experience.
Thema 3	• Business Analysis: This section of the exam measures skills of Tableau Consultants focusing on evaluating the current state of analytics within an organization. It covers mapping business needs to Tableau capabilities, translating analytical requirements to best practices in Tableau, and recommending appropriate deployment options like Tableau Server or Tableau Cloud. It also includes evaluating existing data structures for supporting business needs and identifying performance risks and opportunities.
Thema 4	• Data Management: This part focuses on establishing governance and support for published content. Tableau Consultants are expected to manage data security, publish and maintain data sources and workbooks, and oversee content access. It includes applying governance best practices, using metadata APIs, and supporting administration functions to maintain data integrity and accessibility.
Thema 5	• Business Consulting: For Tableau Consultants, this section involves designing and troubleshooting calculations and workbooks to meet advanced analytical use cases. It covers selecting appropriate chart types, applying Tableau's order of operations in calculations, building interactivity into dashboards, and optimizing workbook performance by resolving resource-intensive queries and other design-related issues.

Analytics-Con-301 Musterprüfungsfragen & Analytics-Con-301 PDF

- C. MAX() Function
- D. A Window Function

Antwort: A

Begründung:

To calculate the Total Sales Value for all categories as displayed in the table, an LOD expression is ideal. An LOD calculation in Tableau allows you to compute values at the data level that is different from the view level. In this case, since the Total Sales Value appears consistent across different sub-categories within each category, an LOD expression can be used to fix the Total Sales Value irrespective of the sub-category detail. Here's how to set it up:

Go to the Calculations area by right-clicking in the data pane and selecting "Create Calculated Field".

Enter a name for the calculation, such as "Total Sales Value".

Enter the LOD expression: { FIXED [Category] : SUM([Sales]) }. This calculation fixes the total sales to the category level, effectively summing sales for all sub-categories within each category, irrespective of how the data is broken down in the view.

Drag this new calculated field into your visualization alongside the existing measures.

This method ensures that the Total Sales Value reflects the total for each category across all its sub-categories, matching the uniform values shown across different rows for each category in your table.

References

The explanation utilizes the concept of Level of Detail calculations in Tableau, which allows for advanced aggregations independent of the view level details. This concept is covered extensively in Tableau's official documentation and relevant training materials such as Tableau's online help resources.

48. Frage

A client is working in Tableau Prep and has a field named OrderId that is compiled by country, year, and an order number as shown in the following table.

OrderId
CA-2017-152156
FR-2017-152157
US-2017-152158
CA-2017-152159

They want to transform the table to appear as shown.

OrderId	Country	OrderNumber
CA-2017-152156	CA	152156
FR-2017-152157	FR	152157
US-2017-152158	US	152158
CA-2017-152159	CA	152159

What should the consultant use to transform the table in the most efficient manner?

- A. The Split option
- B. A calculated field that uses the LEFT function
- C. The Aliases option
- D. A calculated field that uses the TRIM function

Antwort: A

Begründung:

To transform the OrderId field in Tableau Prep, the Split option is the most efficient and straightforward method. Here's how you can

apply it:

In Tableau Prep, drag your dataset into the flow.

Click on the OrderId field in the workspace to select it.

Look for the option in the toolbar that says "Split" and select it.

Choose "Automatic Split" if the delimiters (such as hyphens) are consistent; Tableau Prep should automatically detect the hyphen as the delimiter and split the OrderId into multiple new fields.

The dataset should now show new columns: one for the country code (CA, FR, US), one for the year (2017), and one for the order number (152156, 152157, etc.).

The Split option works effectively here because it automatically identifies and uses the hyphen as the delimiter to divide the original OrderId into the desired components without manual specification of conditions or writing any formulas.

References

This procedure is based on the standard functionalities provided in Tableau Prep for splitting a field into multiple columns based on a delimiter, as described in the Tableau Prep user guide.

49. Frage

A client is considering migrating from Tableau Server to Tableau Cloud.

Which two elements are determining factors of whether the client should use Tableau Server or Tableau Cloud? Choose two.

- A. Whether or not the client needs the ability to connect to public, cloud-based data sources
- B. Amount of data storage used on the client's existing server
- C. Whether or not there are large numbers of concurrent extract refreshes
- D. Whether or not the client plans to leverage single sign-on (SSO)

Antwort: C,D

Begründung:

When considering a migration from Tableau Server to Tableau Cloud, two critical factors to consider are the client's need for single sign-on (SSO) and the volume of concurrent extract refreshes.

Single Sign-On (SSO): Tableau Cloud supports SSO, which can streamline user authentication and enhance security. If the client plans to leverage SSO, Tableau Cloud may be a suitable choice¹.

Concurrent Extract Refreshes: The number of concurrent extract refreshes is a significant factor because it impacts performance and resource allocation. Tableau Server might be more appropriate if the client has a high volume of concurrent extract refreshes, as it allows for more control over the infrastructure to manage these workloads².

References: The decision between Tableau Server and Tableau Cloud should be based on specific organizational needs, including security, compliance, performance, and scalability. The official Tableau resources provide guidance on these factors^{1,2}. Additionally, discussions in the Tableau Community highlight the importance of considering these elements when choosing between Tableau Server and Tableau Cloud¹.

50. Frage

A client has a published data source in Tableau Server and they want to revert to the previous version of the data source. The solution must minimize the impact on users.

What should the consultant do to accomplish this task?

- A. Request that a server administrator restore a Tableau Server backup.
- B. Select a previous version from Tableau Server, download it, and republish that data source.
- C. Delete and recreate the data source manually.
- D. Select a previous version from Tableau Server, and then click Restore.

Antwort: D

Begründung:

To minimize the impact on users when reverting to a previous version of a published data source in Tableau Server, the consultant should use the built-in revision history feature. By selecting a previous version from the revision history and clicking 'Restore', the data source will revert to that version without the need for a full server backup restoration or manual recreation of the data source. This process is quick and has the least amount of disruption to users.

References: The functionality and process for reverting to a previous version of a data source are outlined in Tableau's official documentation on working with content revisions¹. This feature is part of Tableau Server's capabilities to manage and maintain data sources effectively^{2,1}.

51. Frage

.....

Wenn Sie sich auf Salesforce Analytics-Con-301 Prüfung vorbereiten, ist es nicht eine gute Weise für Sie, alle Kenntnisse für die Prüfungen ziellos auswendig zu lernen. Tatsächlich gibt es die Lernmethode, die Salesforce Analytics-Con-301 Prüfung leichter zu bestehen. Wenn Sie die guten Geräte benutzen, können Sie weniger Zeit verwenden. Und Es ist auch die Garantie, die Salesforce Analytics-Con-301 Prüfung zu bestehen. Was ist das Gerät? Natürlich ist die Salesforce Analytics-Con-301 Dumps von PrüfungFrage.
