

Analytics-Con-301 PrüfungGuide, Salesforce Analytics-Con-301 Zertifikat - Salesforce Certified Tableau Consultant

Wir DeutschPrüfung sind die professionellen Anbieter der Schulungsunterlagen zur Salesforce Analytics-Con-301 Zertifizierungsprüfung. Seit langem betrachten wir DeutschPrüfung das Angebot der besten Prüfungsunterlagen zur Salesforce Analytics-Con-301 Zertifizierungsprüfung als unser Ziel. Verglichen zu anderen Webseiten, wir DeutschPrüfung sind immer von anderen vertraut. Warum? Weil wir DeutschPrüfung vieljährige Erfahrungen haben, aufmerksam auf die IT-Zertifizierung-Studie machen und viele Prüfungsregeln sammeln. Damit können wir DeutschPrüfung sehr hohe Hit-Rate haben. Das gewährleistet die Durchlauftrate.

Viele meiner Freude im IT-Bereich haben viel Zeit und Energie für die Salesforce Analytics-Con-301 Zertifizierungsprüfung verwendet. Aber sie haben sich nicht am Kurs oder Training im Internet beteiligt. Für sie ist es schwer, die Salesforce Analytics-Con-301 Prüfung zu bestehen. Und die Erfolgsquote ist auch sehr niedrig. Glücklicherweise bietet DeutschPrüfung die zuverlässigen Salesforce Analytics-Con-301 Prüfungsmaterialien. Die Schulungsunterlagen von DeutschPrüfung beinhalten die Simulationssoftware und die Prüfungsfragen-und antworten. Wir würden die besten Prüfungsfragen und Antworten zur Analytics-Con-301 Zertifizierungsprüfung bieten, um Ihre Bedürfnisse abzudecken.

>> Analytics-Con-301 Testantworten <<

Analytics-Con-301 Originale Fragen & Analytics-Con-301 Vorbereitungsfragen

Eine breite Vielzahl von Salesforce Analytics-Con-301 Prüfungsfragen und Antworten aus DeutschPrüfung sind logisch. Salesforce Analytics-Con-301 Zertifizierungsantworten aus DeutschPrüfung sind gleich wie die in der realen Prüfung. Vor dem Kauf der Salesforce Analytics-Con-301 Echte Fragen können Sie kostenlose Demo zum Teil auf der Website www.DeutschPrüfung.de herunterladen.

Salesforce Certified Tableau Consultant Analytics-Con-301 Prüfungsfragen mit Lösungen (Q39-Q44):

39. Frage

An executive-level workbook leverages 37 of the 103 fields included in a data source. Performance for the workbook is noticeably slower than other workbooks on the same Tableau Server.

What should the consultant do to improve performance of this workbook while following best practice?

- A. Connect to the data source via a custom SQL query.
- **B. Use filters, hide unused fields, and aggregate values.**
- C. Split some visualizations on the dashboard into many smaller visualizations on the same dashboard.

Antwort: B

Begründung:

OD. Restrict users from accessing the workbook to reduce server load.

Explanation:

To improve the performance of a Tableau workbook, it is best practice to streamline the data being used. This can be achieved by using filters to limit the data to only what is necessary for analysis, hiding fields that are not being used to reduce the complexity of the data model, and aggregating values to simplify the data and reduce the number of rows that need to be processed. These steps can help reduce the load on the server and improve the speed of the workbook.

References: The best practices for optimizing workbook performance in Tableau are well-documented in Tableau's official resources, including the Tableau Help Guide and the Designing Efficient Workbooks whitepaper, which provide detailed recommendations on how to streamline workbooks for better performance¹².

40. Frage

A client wants to provide sales users with the ability to perform the following tasks:

- * Access published visualizations and published data sources outside the company network.
- * Edit existing visualizations.
- * Create new visualizations based on published data sources.
- . Minimize licensing costs.

Which site role should the client assign to the sales users?

- A. Viewer
- **B. Explorer (can publish)**
- C. Creator
- D. Site Administrator

Antwort: B

Begründung:

The Explorer (can publish) site role in Tableau is designed for users who need to access, edit, and create visualizations based on published data sources, even when they are outside the company network. This role allows users to perform web editing and save their work, making it suitable for sales users who need these capabilities. It is also a cost-effective option as it does not require the full capabilities and associated costs of the Creator license.

References: The information about the Explorer (can publish) role and its capabilities can be found in the official Tableau documentation on site roles and permissions¹². This role is appropriate for users who need to interact with published content and create new visualizations without the need for full site administration or advanced content creation tools that come with the Creator role³.

41. Frage

A consultant plans a Tableau deployment for a client that uses Salesforce. The client wants users to automatically see Tableau views of regional sales filtered by customer as soon as the users sign into Salesforce.

Which approach should the consultant use to deliver the final visualization?

- A. Create a list of URLs that the users can click in Salesforce.
- B. Publish to Tableau Mobile for viewing.
- C. Create subscriptions for each view to deliver reports by email.
- **D. Embed views into Salesforce.**

Antwort: D

Begründung:

To ensure that users automatically see Tableau views of regional sales filtered by customer as they sign into Salesforce, embedding the views directly into Salesforce is most effective:

Embedding Views: Tableau provides capabilities to embed its dashboards into web applications such as Salesforce. This approach ensures that the visualization is part of the Salesforce user interface, enhancing user experience by not requiring users to navigate away from Salesforce to view the data.

Implement this by using Tableau's embedding code, which can be generated from the Tableau Server for each specific view. Place this embed code into the Salesforce Visualforce pages or use Salesforce Canvas to integrate these views seamlessly.

This setup allows the Tableau views to inherit user credentials from Salesforce, enabling personalized data visualization based on the user's access rights and region, directly aligned with their Salesforce login session.

References

The embedding technique is documented in both Tableau's and Salesforce's official integration guides, which provide step-by-step instructions on embedding Tableau views into Salesforce platforms.

42. Frage

A stakeholder has multiple files saved (CSV/Tables) in a single location. A few files from the location are required for analysis. Data transformation (calculations) is required for the files before designing the visuals. The files have the following attributes:

- . All files have the same schema.
- . Multiple files have something in common among their file names.
- . Each file has a unique key column.

Which data transformation strategy should the consultant use to deliver the best optimized result?

- A. Apply the data transformation (calculations) in each require file and do the wildcard union to combine/merge before designing the visuals.
- **B. Use wildcard Union option to combine/merge all the files together before doing the data transformation (calculations).**
- C. Use join option to combine/merge all the files together before doing the data transformation (calculations).
- D. Apply the data transformation (calculations) in each require file and do the join to combine/merge before designing the visuals.

Antwort: B

Begründung:

Moving calculations to the data layer and materializing them in the extract can significantly improve the performance of reports in Tableau. The calculation $ZN([Sales]) * (1 - ZN([Discount]))$ is a basic calculation that can be easily computed in advance and stored in the extract, speeding up future queries. This type of calculation is less complex than table calculations or LOD expressions, which are better suited for dynamic analysis and may not benefit as much from materialization^{1,2}.

References: The answer is based on the best practices for creating efficient calculations in Tableau, as described in Tableau's official documentation, which suggests using basic and aggregate calculations to improve performance¹. Additionally, the process of materializing calculations in extracts is detailed in Tableau's resources².

Given that all files share the same schema and have a common element in their file names, the wildcard union is an optimal approach to combine these files before performing any transformations. This strategy offers the following advantages:

Efficient Data Combination: Wildcard union allows multiple files with a common naming scheme to be combined into a single dataset in Tableau, streamlining the data preparation process.

Uniform Schema Handling: Since all files share the same schema, wildcard union ensures that the combined dataset maintains consistency in data structure, making further data manipulation more straightforward.

Pre-Transformation Combination: Combining the files before applying transformations is generally more efficient as it reduces redundancy in transformation logic across multiple files. This means transformations are written and processed once on the unified dataset, rather than repeatedly for each individual file.

References:

Wildcard Union in Tableau: This feature simplifies the process of combining multiple similar files into a single Tableau data source, ensuring a seamless and efficient approach to data integration and preparation.

43. Frage

SIMULATION

Use the following login credentials to sign in to the virtual machine:

Username: Admin

Password:

The following information is for technical support purposes only:

Lab Instance: 40201223

To access Tableau Help, you can open the Help.pdf file on the desktop.

From the desktop, open the **CC** workbook.
Open the **Categorical Sales** worksheet.

You need to use table calculations to compute the following:

- For each category and year, calculate the average sales by segment.
- Create another calculation to compute the year-over-year percentage change of the average sales by category calculation. Replace the original measure with the year-over-year percentage change in the crosstab.

From the File menu in Tableau Desktop, click **Save**.

From the desktop, open the CC workbook.

Open the Categorical Sales worksheet.

You need to use table calculations to compute the following:

. For each category and year, calculate the average sales by segment.

. Create another calculation to compute the year-over-year percentage change of the average sales by category calculation. Replace the original measure with the year-over-year percentage change in the crosstab.

From the File menu in Tableau Desktop, click Save.

Antwort:

Begründung:

See the complete Steps below in Explanation

Explanation:

To compute the required calculations and update the worksheet in Tableau Desktop, follow these steps:

Compute Average Sales by Segment for Each Category and Year:

Open the CC workbook and navigate to the Categorical Sales worksheet.

Drag the 'Sales' field to the Rows shelf if it's not already there.

Drag the 'Segment' field to the Rows shelf as well, placing it next to 'Category' and 'Year'.

Right-click on the 'Sales' field in the Rows shelf and select 'Quick Table Calculation' > 'Average'. This will compute the average sales for each segment within each category and year.

Create a Calculation for Year-over-Year Percentage Change:

Right-click in the data pane and select 'Create Calculated Field'.

Name the calculated field something descriptive, e.g., "YoY Sales Change".

Enter the formula to calculate the year-over-year percentage change:

$(\text{ZN}(\text{SUM}([\text{Sales}])) - \text{LOOKUP}(\text{ZN}(\text{SUM}([\text{Sales}])), -1)) / \text{ABS}(\text{LOOKUP}(\text{ZN}(\text{SUM}([\text{Sales}])), -1))$ Click 'OK' to save the calculated field.

Replace the Original Measure with the Year-over-Year Percentage Change in the Crosstab:

Remove the original 'Sales' measure from the view by dragging it off the Rows shelf.

Drag the newly created "YoY Sales Change" calculated field to the Rows shelf where the 'Sales' field was originally.

Format the "YoY Sales Change" field to display as a percentage. Right-click on the field in the Rows shelf, select 'Format', and adjust the number format to percentage.

Save Your Changes:

From the File menu, click 'Save' to ensure all your changes are stored.

References:

Tableau Help: Offers guidance on creating calculated fields and using table calculations.

Tableau Desktop User Guide: Provides instructions on formatting and saving worksheets.

These steps allow you to manipulate data within Tableau effectively, using table calculations to analyze trends and changes in sales data by category and segment over years.
