

# ANS-C01 Exam Test, ANS-C01 Latest Material

What's more, part of that ITCertMagic ANS-C01 dumps now are free: <https://drive.google.com/open?id=1tdWbE5PtqYRIBR2lmulhopCy6qcY1cHX>

We believe that every customer pays most attention to quality when he is shopping. Only high-quality goods can meet the needs of every customer better. And our ANS-C01 training quiz has such high quality, because its hit rate of test questions is extremely high. Perhaps you will find in the examination that a lot of questions you have seen many times in our ANS-C01 Real Exam. And you will find our ANS-C01 practice questions are so popular that a lot of our candidates have bought them.

To achieve ANS-C01 Certification, candidates must pass a rigorous exam that includes both multiple-choice and hands-on questions. ANS-C01 exam is designed to test the candidate's knowledge and skills in real-world scenarios, so it requires a practical understanding of networking principles and AWS services. Candidates must also demonstrate their ability to troubleshoot and optimize network performance.

**ANS-C01 Latest Material | Latest ANS-C01 Exam Testking**

As long as you buy our ANS-C01 practice materials and take it seriously to your consideration, we can promise that you will pass your ANS-C01 exam and get your certification in a short time. We can claim that if you study with our ANS-C01 learning guide for 20 to 30 hours as preparation, then you can be confident to pass the exam. So choose our products to help you review, you will benefit a lot from our ANS-C01 study guide.

## Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q201-Q206):

### NEW QUESTION # 201

An ecommerce company is hosting a web application on Amazon EC2 instances to handle continuously changing customer demand. The EC2 instances are part of an Auto Scaling group.

The company wants to implement a solution to distribute traffic from customers to the EC2 instances. The company must encrypt all traffic at all stages between the customers and the application servers.

No decryption at intermediate points is allowed.

Which solution will meet these requirements?

- A. Create an Application Load Balancer (ALB). Add an HTTPS listener to the ALB. Configure the Auto Scaling group to register instances with the ALB's target group.
- **B. Create a Network Load Balancer (NLB). Add a TCP listener to the NLB. Configure the Auto Scaling group to register instances with the NLB's target group.**
- C. Create an Amazon CloudFront distribution. Configure the distribution with a custom SSL/TLS certificate. Set the Auto Scaling group as the distribution's origin.
- D. Create a Gateway Load Balancer (GLB). Configure the Auto Scaling group to register instances with the GLB's target group.

### Answer: B

Explanation:

If you need to pass encrypted traffic to the targets without the load balancer decrypting it, create a TCP listener on port 443 instead of creating a TLS listener.

<https://docs.aws.amazon.com/elasticloadbalancing/latest/network/create-tls-listener.html>

### NEW QUESTION # 202

Your organization has placed a project on hold and has stopped 30 public EC2 instances. These instances use instance store volumes and do not have custom AMIs associated. You are still being charged every month. What is the charge probably for?

Response:

- A. You are being charged for the EBS volumes.
- **B. You have Elastic IPs associated with those instances.**
- C. AWS charges for dormant accounts.
- D. There is a "stopped instance" fee that AWS charges every month.

### Answer: B

### NEW QUESTION # 203

A company is using AWS to host all of its applications. Each application is isolated in its own Amazon VPC. Different environments such as Development, Test, and Production are also isolated in their own VPCs.

The Network Engineer needs to automate VPC creation to enforce the company's network and security standards. Additionally, the CIDR range used in each VPC needs to be unique.

Which solution meets all of these requirements?

Response:

- A. Use the VPC wizard in the AWS Management Console. Type in the CIDR blocks for the VPC and subnets.
- B. Use AWS OpsWorks to deploy the VPC infrastructure and a custom resource to request a CIDR range from an external IP address management (IPAM) service.
- **C. Use AWS CloudFormation to deploy the VPC infrastructure and a custom resource to request a CIDR range from an external IP address management (IPAM) service.**
- D. Create the VPCs using AWS CLI and use the dry-run flag to validate if the current CIDR range is in use.

**Answer: C**

#### **NEW QUESTION # 204**

A company is in the early stage of AWS Cloud adoption. The company has an application that is running in an on-premises data center in Asia. The company needs to deploy new applications in the us-east-1 Region.

The applications in the cloud need connectivity to the on-premises data center.

The company needs to set up a communication channel between AWS and the data center. The solution must improve latency, minimize the possibility of performance impact from transcontinental routing over the public internet, and encrypt data in transit. Which solution will meet these requirements in the LEAST amount of time?

- A. Create an AWS Direct Connect connection. Create a virtual private gateway. Create a public VIF and a private VIF that use the virtual private gateway. Create an AWS Site-to-Site VPN connection over the public VIF.
- B. **Create an AWS Site-to-Site VPN connection with acceleration turned on. Create a transit gateway.**  
Attach the Site-to-Site VPN connection to the transit gateway. Create a transit gateway attachment to the VPC where the applications will be deployed.
- C. Create an AWS Site-to-Site VPN connection with acceleration turned off. Create a transit gateway. Attach the Site-to-Site VPN connection to the transit gateway. Create a transit gateway attachment to the VPC where the applications will be deployed.
- D. Create an AWS Site-to-Site VPN connection with acceleration turned on. Create a virtual private gateway. Attach the Site-to-Site VPN connection to the virtual private gateway. Attach the virtual private gateway to the VPC where the applications will be deployed.

**Answer: B**

#### **NEW QUESTION # 205**

To stop sending traffic to resources with weighted routing for Amazon Route 53, you must do which one of the following?

Response:

- A. Change the resource record weight to 100.
- B. Switch to a multivalue answer resource record.
- C. **Change the resource record weight to 0.**
- D. Delete the resource record.

**Answer: C**

#### **NEW QUESTION # 206**

.....

According to the statistics shown in the feedback chart, the general pass rate for latest ANS-C01 test prep is 98%, which is far beyond that of others in this field. In recent years, our ANS-C01 exam guide has been well received and have reached 99% pass rate with all our dedication. As one of the most authoritative question bank in the world, our study materials make assurance for your passing the ANS-C01 Exam.
