Updated Amazon ANS-C01 exam practice material in 3 different formats

With the consistent reform in education, our ANS-C01 test question also change with the newest education regulation. We have strong confidence in offering the first-class ANS-C01 study prep to our customers. So what you have learned is fully conforming to the latest test syllabus. Also, our specialists can predicate the ANS-C01 exam precisely. Firstly, our company has summed up much experience after so many years' accumulation. The model test is very important. You are advised to master all knowledge of the

model test. Most of the real exam questions come from the adaption of our ANS-C01 Test Question. In fact, we get used to investigate the real test every year. The similarity between our study materials and official test is very amazing. In a word, your satisfaction and demands of the ANS-C01 exam braindump is our long lasting pursuit. Hesitation will not generate good results. Action always speaks louder than words. Our ANS-C01 study prep will not disappoint you. So just click to pay for it.

Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q198-Q203):

NEW QUESTION # 198
A company is running a hybrid cloud environment. The company has multiple AWS accounts as part of an organization in AWS Organizations. The company needs a solution to manage a list of IPv4 on-premises hosts that will be allowed to access resources in AWS. The solution must provide version control for the list of IPv4 addresses and must make the list available to the AWS accounts in the organization.
Which solution will meet these requirements?

- A. Create a customer-managed prefix list. Add entries for the initial list of on-premises IPv4 hosts. Use AWS Firewall Manager to share the managed prefix list with the organization.
- B. Create a customer-managed prefix list. Add entries for the initial list of on-premises IPv4 hosts. Create a resource share in AWS Resource Access Manager. Add the managed prefix list to the resource share.
  Share the resource with the organization.
- C. Create an Amazon DynamoDB table. Add entries for the initial list of on-premises IPv4 hosts. Create an AWS Lambda function that assumes a role in each AWS account in the organization to authorize inbound rules on security groups based on entries from the DynamoDB table.
- D. Create a security group. Add inbound rule entries for the initial list of on-premises IPv4 hosts. Create a resource share in AWS Resource Access Manager. Add the security group to the resource share. Share the resource with the organization.

Answer: B

NEW QUESTION # 199
A company has several production applications across different accounts in the AWS Cloud. The company operates from the us-east-1 Region only. Only certain partner companies can access the applications. The applications are running on Amazon EC2 instances that are in an Auto Scaling group behind an Application Load Balancer (ALB). The EC2 instances are in private subnets and allow traffic only from the ALB. The ALB is in a public subnet and allows inbound traffic only from partner network IP address ranges over port 80.
When the company adds a new partner, the company must allow the IP address range of the partner network in the security group that is associated with the ALB in each account. A network engineer must implement a solution to centrally manage the partner network IP address ranges.
Which solution will meet these requirements in the MOST operationally efficient manner?

- A. Create an Amazon DynamoDB table to maintain all IP address ranges and security groups that need to be updated. Update the DynamoDB table with the new IP address range when the company adds a new partner. Invoke an AWS Lambda function to read new IP address ranges and security groups from the DynamoDB table to update the security groups. Deploy this solution in all accounts.
- B. Create a new prefix list. Add all allowed IP address ranges to the prefix list. Share the prefix list across different accounts by using AWS Resource Access Manager (AWS RAM). Update security groups to use the prefix list instead of the partner IP address range. Update the prefix list with the new IP address range when the company adds a new partner.
- C. Create an Amazon S3 bucket to maintain all IP address ranges and security groups that need to be updated. Update the S3 bucket with the new IP address range when the company adds a new partner. Invoke an AWS Lambda function to read new IP address ranges and security groups from the S3 bucket to update the security groups. Deploy this solution in all accounts.
- D. Create a new prefix list. Add all allowed IP address ranges to the prefix list. Use Amazon EventBridge (Amazon CloudWatch Events) rules to invoke an AWS Lambda function to update security groups whenever a new IP address range is added to the prefix list. Deploy this solution in all accounts.

Answer: B

NEW QUESTION # 200
You have to set up an AWS Storage Gateway appliance on-premises to archive all of your data to Amazon S3 using the file

gateway mode. You have AWS Direct Connect connectivity between your data center and AWS. You have set up a private Virtual Interface (VIF) to a VPC, and you want to use that for sending all traffic to AWS.
How will you architect this?
Response:

- A. Set up a Squid HTTP proxy on an Amazon EC2 instance in the VPC. Configure the storage gateway to use this proxy
- B. Configure the storage gateway to use a VPC private endpoint on the VPC
- C. Create an IP Security (IPSec) Virtual Private Network (VPN) tunnel between the storage gateway and the VPC over a private VIF.
- D. Set up a storage gateway appliance in the VPC and use that as a gateway

Answer: A

NEW QUESTION # 201
You are a network admin of a US company called Webby Widgets that is expanding to Europe. The company has a website that serves dynamic and static content. You have been instructed to ensure the European clients receive the least latency possible, no matter where in Europe they live, while still allowing the US clients to receive the same user experience and performance they have been accustomead to. You have also been instructed to ensure both countries use the same URL to access the site and keep costs low.
What two things should you do?
(Choose two.)
Response:

- A. Deploy three VPCs; one for the US, one for the EU, and one as a central VPC that hosts an Elastic Load Balancer that will distribute traffic between the US and EU VPCs.
- B. Create two A records: eu.webbywidgets.com that points to the EU resources and us.webbywidgets.com that points to the US resources.
- C. Use the Traffic Flow policy creator to create the perfect routing policy.
- D. Create a CloudFront distribution to serve the static content from an S3 bucket.

Answer: C,D

NEW QUESTION # 202
Which AWS service is used within an AWS Config Rule to perform the logic evaluation of that rule?
Response:

- A. SWF
- B. WAF
- C. Inspector
- D. Lambda

Answer: D

NEW QUESTION # 203
......

Our PDF version of our ANS-C01 exam practice guide is convenient for the clients to read and supports the printing. If the clients use our PDF version they can read the PDF form conveniently and take notes. The ANS-C01 quiz prep can be printed onto the papers. If the clients need to take note of the important information they need they can write them on the papers to be convenient for reading or print them on the papers. The clients can read our ANS-C01 Study Materials in the form of PDF or on the printed papers. Thus the clients learn at any time and in any place and practice the ANS-C01 exam practice guide repeatedly.
