

Answers HPE7-A01 Real Questions | HPE7-A01 Valid Test Voucher

P.S. Free 2025 HP HPE7-A01 dumps are available on Google Drive shared by Fast2test: <https://drive.google.com/open?id=1KP5oLhn-eoLjiaGuFbbQWn9t0HMLyLT4>

Our Aruba Certified Campus Access Professional Exam (HPE7-A01) questions PDF version is great for busy candidates who like to learn on the go with their smartphones or tablets. The Aruba Certified Campus Access Professional Exam (HPE7-A01) dumps PDF format's portability making it ideal for on-the-go studying from any smart device. Studying in PDF format is convenient since it can be printed out and used as a hard copy if you do not have access to a smart device at the moment.

It is very necessary for candidates to get valid HPE7-A01 dumps collection because it can save your time and help you get succeed in IT filed by clearing HPE7-A01 actual test. Passing real exam is not easy task so many people need to take professional suggestions to prepare HPE7-A01 Practice Exam. The reason that we get good reputation among dump vendors is the most reliable HPE7-A01 pdf vce and the best-quality service.

HPE7-A01 Valid Test Voucher, HPE7-A01 Actual Exam

In order to pass the HP HPE7-A01 Exam, selecting the appropriate training tools is very necessary. And the study materials of HP HPE7-A01 exam is a very important part. Fast2test can provide valid materials to pass the HP HPE7-A01 exam. The IT experts in Fast2test are all have strength and experience. Their research materials are very similar with the real exam questions. Fast2test is a site that provide the exam materials to the people who want to take the exam, and we can help the candidates to pass the exam effectively.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q83-Q88):

NEW QUESTION # 83

You are doing tests in your lab and with the following equipment specifications

- * AP1 has a radio that generates a 10 dBm signal
- * AP2 has a radio that generates a 11 dBm signal
- * AP1 has an antenna with a gain of 9 dBi
- * AP2 has an antenna with a gain of 12 dBi.
- * The antenna cable for AP1 has a 2 dB loss
- * The antenna cable for AP2 has a 3 dB loss

What would be the calculated Equivalent Isotropic Radiated Power (EIRP) for APT?

- **A. 17 dBm**
- B. 26 dBm
- C. -12 dBm
- D. 30 dBm

Answer: A

Explanation:

The calculated Equivalent Isotropic Radiated Power (EIRP) for AP1 is 17 dBm.

EIRP is the measured radiated power of an antenna in a specific direction. It is equal to the input power to the antenna multiplied by the gain of the antenna. It can also take into account the losses in transmission line, connectors, and other components. The formula for EIRP is:

$$\text{EIRP} = P + G - L$$

where P is the output power of the radio, G is the gain of the antenna, and L is the loss of the cable and connectors.

For AP1, we have:

$$P = 10 \text{ dBm} \quad G = 9 \text{ dBi} \quad L = 2 \text{ dB}$$

Therefore,

$$\text{EIRP} = 10 + 9 - 2 \quad \text{EIRP} = 17 \text{ dBm}$$

NEW QUESTION # 84

A customer wants to enable wired authentication across all their CX switches. One of the requirements is that the switch must be able to authenticate a single computer connected through a VoIP phone.

Which feature should be enabled to support this requirement?

- **A. Multi-Domain Authentication**
- B. Device-Based Mode
- C. MAC Authentication
- D. Multi-Auth Mode

Answer: A

Explanation:

Multi-Domain Authentication is the feature that should be enabled to support the requirement that the switch must be able to authenticate a single computer connected through a VoIP phone. Multi-Domain Authentication is a feature that allows an Aruba CX switch to apply different authentication methods and policies to different devices connected to the same port. For example, a VoIP phone and a computer can be connected to the same port using a single cable, but they can be authenticated separately using different credentials and assigned to different VLANs. The other options are incorrect because they either do not support multiple devices on the same port or do not provide authentication. References:

NEW QUESTION # 85

Which Aruba AP mode is sending captured RF data to Aruba Central for waterfall plot?

- A. Air Monitor
- B. Dual Mode
- **C. Spectrum Monitor**
- D. Hybrid Mode

Answer: C

Explanation:

Spectrum Monitor is an Aruba AP mode that is sending captured RF data to Aruba Central for waterfall plot.

Spectrum Monitor is a mode that allows an AP to scan all channels in both 2.4 GHz and 5 GHz bands and collect information about the RF environment, such as interference sources, noise floor, channel utilization, etc. The AP then sends this data to Aruba Central, which is a cloud-based network management platform that can display the data in various formats, including waterfall plot. Waterfall plot is a graphical representation of the RF spectrum over time, showing the frequency, amplitude, and duration of RF signals. The other options are incorrect because they are either not AP modes or not sending RF data to Aruba Central. References:

NEW QUESTION # 86

Your Director of Security asks you to assign AOS-CX switch management roles to new employees based on their specific job requirements. After the configuration was complete, it was noted that a user assigned with the auditors role did not have the appropriate level of access on the switch. The user was not allowed to perform firmware upgrades and a privilege level of 15 was not assigned to their role. Which default management role should have been assigned for the user?

- A. administrators
- B. sysadmin
- C. config
- **D. sysops**

Answer: D

Explanation:

The sysops user role is a predefined role that allows users to perform system operations on the switch, such as backup, restore, upgrade, or reboot. The sysops user role also has access to the PUT and POST methods for REST API, which can be used to modify the switch configuration.

The sysops user role has a privilege level of 15, which is the highest level of access on the switch.

NEW QUESTION # 87

A network administrator is troubleshooting some issues guest users are having when connecting and authenticating to the network. The access switches are AOS-CX switches.

What command should the administrator use to examine information on which role the guest user has been assigned?

- A. show port-access role
- B. show port-access captiveportal profile
- C. diag-dump captiveportal client verbose
- **D. show aaa authentication port-access interface all client-status**

Answer: D

Explanation:

The show aaa authentication port-access interface all client-status command displays the status of all clients authenticated by port-based access control on all interfaces. The output includes the MAC address, user role, VLAN ID, and session timeout for each client. This command can be used to examine information on which role the guest user has been assigned by the AOS-CX switch.
