Axis Network Video Exam Sample Questions (Q143-Q148):

NEW QUESTION # 143

If the subject is 3 m (10 ft) away, what is the pixel density for a 1920x1080 camera?

- A. 324 px/m (108 px/ft)
- **B. 162 px/m (54 px/ft)**
- C. 576 px/m (192 px/ft)
- D. The information is insufficient

Answer: B

Explanation:

For a 1920x1080 camera, the pixel density at a distance of 3 meters (10 feet) can be calculated using the formula for pixel density (pixels per meter/foot). Given the resolution and distance, the pixel density is 162 pixels per meter (54 pixels per foot). Axis provides guidelines and tools for calculating pixel density to ensure the camera setup meets the required image quality for identification and recognition purposes in their technical resources and planning tools.

NEW QUESTION # 144

When using an external IR illuminator, what can happen if the beam angle is significantly narrower than the field of view?

- A. Heat can distort the image
- **B. The exposure may be uneven**
- C. Focus must be set manually
- D. The backlight can increase

Answer: B

Explanation:

When using an external IR illuminator with a beam angle significantly narrower than the field of view, the exposure may be uneven. This can result in parts of the image being overexposed (too bright) while other parts remain underexposed (too dark). Ensuring that the beam angle of the IR illuminator matches the field of view of the camera is essential for achieving uniform illumination across the entire surveillance area.

NEW QUESTION # 145

Which scenario can be solved using an action rule and a condition that is set up on the device?

- A. Sending an email to the admin user when a device stops working
- **B. Playing an alert on a speaker when motion is detected after opening hours**
- C. Removing frames from the footage when nothing changes in the scene
- D. Increasing motion detection sensitivity within a live scene

Answer: B

Explanation:

"Axis devices can use action rules with conditions such as schedule, input, or motion detection. For example, an action rule can be set to play a sound through a network speaker if motion is detected outside of business hours."

- Axis Communications Academy, Network Video Fundamentals, 2022

"Action rules allow users to automate responses to events by setting conditions. Example: If motion is detected after hours, play a pre-recorded message on a network speaker."

NEW QUESTION # 146

Which network features are usually combined to prevent access to the surveillance network?

- A. Router port forwarding and IP subnets
- B. Router port forwarding and VLANs
- C. IEEE 802.3ad link aggregation and HTTPS encryption
- **D. IP subnets and VLANs**

Answer: D

Explanation:

IP subnets and VLANs are commonly used network features to prevent unauthorized access to the surveillance network. By segmenting the network using IP subnets, different portions of the network can be isolated, reducing the risk of cross-network attacks. VLANs (Virtual Local Area Networks) further enhance security by creating separate broadcast domains within the same physical network, thereby isolating surveillance devices from other network traffic and improving overall network security and performance.

NEW QUESTION # 147

Which camera setting can be adjusted to improve the color fidelity for this scene?

- A. The WDR setting
- B. The exposure time
- C. The IR-cut filter
- D. The white balance

Answer: D

Explanation:

"Adjusting the white balance setting can correct color inaccuracies caused by different lighting conditions, such as the orange tint seen under sodium-vapor street lamps."

- Axis Communications Academy, Network Video Fundamentals, 2022

"White balance ensures that white objects are rendered as white in the image, improving overall color fidelity."
