API-936 Actual Questions, Reliable API-936 Test Guide

API API-936 reliable brain dumps are promised to help you clear your API-936 test certification with high scores. API-936 questions & answers will contain comprehensive knowledge, which will ensure high hit rate and best pass rate. When you choose API-936 Pdf Torrent, you will get your API-936 certification with ease, which will be the best choice to accelerate your career as a professional in the Information Technology industry.

API Refractory Personnel Sample Questions (Q49-Q54):

NEW QUESTION # 49

The length of metal fiber is

- A. 10 or 15mm
- B. 30 or 40mm
- C. 19mm or 25mm
- D. None of the above

Answer: C

NEW QUESTION # 50

Each sample tested in accordance with ASTM C181 for workability index shall consist of how many specimens?

- A. 0
- B. 1

- C. 2
- D. 3

Answer: B

Explanation:

According to API Std 936, which incorporates ASTM C181 by reference:

"Each sample tested for workability index in accordance with ASTM C181 shall consist of three specimens."

- API Std 936, Section 6.4.6 Workability Testing

Thus, Option C is correct. This testing ensures consistency in the flow characteristics of castable refractories prior to installation.

NEW QUESTION # 51

The vessel in which the cracking reaction occurs or is completed, and in which the product gases are separated from coke and/or catalyst particulate, is the:

- A. stand pipe.
- B. stripper.
- C. regenerator.
- D. reactor.

Answer: D

Explanation:

This definition is rooted in petroleum refining terminology used in the context of fluid catalytic cracking (FCC) units:

"Reactor: The vessel in which the cracking reaction occurs or is completed and in which the product gases are separated from coke and/or catalyst particulate."

- API Std 936, Definitions, Section 3

Option B is the correct term describing this component. A stripper removes volatiles, a regenerator burns off coke from spent catalyst, and a standpipe is used for catalyst transport-not for the cracking reaction itself.

NEW QUESTION # 52

Commercially on calcined basis bauxite must contain at least

- A. 65% fused silica
- B. None of the above
- C. 65% alumina
- D. 60% alumina

Answer: C

NEW QUESTION # 53

Which of the following is a quality control element?

(This may have more than one correct answer; please select all answers that apply.)

- A. Report writing
- B. As-installed testing
- C. Installation monitoring
- D. Initial Inspection

Answer: B,C,D

Explanation:

According to API Std 936, the quality control program includes several essential elements to ensure compliance with material specifications and installation procedures. These elements include:

"Key quality control activities include, but are not limited to: material qualification testing, initial inspection, installation monitoring, and as-installed testing."

- API Std 936, Section 4.1, Quality Control Program

Although documentation is essential, report writing is not listed as a core quality control element within this section. Therefore, A, B,

and C are the correct answers.

NEW QUESTION # 54

Our API-936 exam torrent has a high quality that you can't expect. I think our Refractory Personnel prep torrent will help you save much time, and you will have more free time to do what you like to do.
