Certs Exam HP - HPE7-A07

Question #1

You deployed UBT to securely tunnel traffic from user desktop PCs connected behind VoIP phones. All other non-UBT clients are connected to a different network. After the deployment, users reported interruptions to their phone service.

- A. The VLAN on which UBT clients are placed is not configured on the switch uplink and traffic from the VoIP phones is being dropped.
- B. You failed to correctly configure a user-defined VRF to support the UBT clients behind the VoIP phones, causing traffic to drop.
- C. Broadcast/multicast packets are copied to both the tunnel and locally, causing duplicate packets and network instability.
- D. The UBT client broadcast/multicast packets returned to the same switch port and corrupted the phone's MAC table.

Answer: A

Explanation

If users report interruptions to their phone service after the deployment of User-Based Tunneling (UBT), it can be due to the VLAN designated for UBT clients not being configured on the switch uplink. As a result, traffic from VoIP phones, which may be trying to use the same VLAN, could be dropped, leading to service interruptions. Ensuring that the VLAN is properly configured on the switch uplink is crucial for the seamless operation of UBT clients and VoIP services.

Question #2

Which statements accurately describe OSPF Graceful Restart (when the restarting router is able to keep its forwarding tables across the restart)? (Select two.)

- A. The GR helper role is supported on AOS-CX 6100 switches.
- B. VSF Failover and Graceful-Restart require a VSF secondary member in the VSF stack.
- C. Bidirectional Forwarding Detection for OSPF and GR are mutually exclusive features.
- D. OSPF Routers listen for Grace-LSAs on each network segment where there is an OSPF adjacency.
- E. You must ensure your VSF stack has a secondary member when acting as a GR helper.

Answer: A, D

Explanation

Graceful Restart (GR) allows a router to continue forwarding packets while it restarts its OSPF process. The GR helper role on AOS-CX switches supports routers during this process. OSPF routers listen for Grace-LSAs to identify neighbors undergoing a graceful restart, maintaining adjacencies with those routers to allow

P.S. Free & New API-936 dumps are available on Google Drive shared by ExamsTorrent: <https://drive.google.com/open?id=1mmnMSK5oMANzvJDO5kS67zQsIAeFEkFd>

All API-936 test prep is made without levity and the passing rate has up to 98 to 100 percent now. We esteem your variant choices so all these versions of API-936 exam guides are made for your individual preference and inclination. We know that tenet from the bottom of our heart, so all parts of service are made due to your interests. You are entitled to have full money back if you fail the exam even after getting our API-936 Test Prep. Our staff will help you with genial attitude.

API-936 exam covers a wide range of topics related to refractory materials and their applications, including refractory types, properties, and selection criteria, installation techniques, curing and drying processes, and quality control measures. API-936 exam also assesses the candidates' understanding of industry codes and standards, such as API, ASTM, and ASME, as well as safety practices and procedures. Refractory Personnel certification is valid for three years and requires individuals to pass a recertification exam after that period to demonstrate their continued competency in the field. API-936 Certification is a valuable asset for refractory professionals, as it confirms their expertise and enhances their marketability and career opportunities.

API-936 (Refractory Personnel) Exam is a certification exam offered by the American Petroleum Institute (API) that is designed for individuals who work in the field of refractory installation and inspection in the oil and gas industry. API-936 exam is designed to test the knowledge and skills of the candidates in various areas such as refractory materials, installation, testing, and inspection.

API-936 Exam Dumps Pdf & Learning API-936 Materials

The ExamsTorrent is one of the leading platforms that has been offering real and valid Refractory Personnel (API-936) exam

practice test questions. These Refractory Personnel (API-936) exam questions are designed and verified by API API-936 subject matter experts. They work closely together and put all their expertise to check the API API-936 exam questions one by one.

API 936 is a certification exam designed for refractory personnel who work in the petrochemical, power generation, and other high-temperature industries. API-936 Exam is administered by the American Petroleum Institute (API) and is intended to assess the knowledge and skills of individuals who are involved in the selection, installation, inspection, and maintenance of refractory materials. Refractory materials are used to line furnaces, boilers, and other high-temperature equipment to protect them from damage and ensure safe and efficient operation.

API Refractory Personnel Sample Questions (Q86-Q91):

NEW QUESTION # 86

Additives used to facilitate moisture removal of refractory linings during dry out are called

- A. None of the above
- **B. Organic fiber**
- C. Mineral fiber
- D. Metal fiber

Answer: B

NEW QUESTION # 87

In API RP 936, the referenced ASTM standard procedure for cold crushing strength and modulus of rupture is

- A. None of the above
- **B. C 133 - 97**
- C. C704 - 01
- D. C181 - 91

Answer: B

NEW QUESTION # 88

Selection, installation, inspection, and testing of anchors shall be in accordance with:

- **A. drawing and specifications**
- B. contractor's QA/QC department
- C. API RP 577
- D. welding code

Answer: A

Explanation:

API 936 clearly stipulates that the selection, installation, inspection, and testing of anchors must comply with the project's drawings and specifications. These documents define anchor spacing, type, material, orientation, and welding requirements, which must be followed during construction and QA processes.

API 936 does not defer this responsibility to external documents like API RP 577 or welding codes unless explicitly referenced in the project specifications. QA/QC departments may oversee adherence, but do not define the criteria themselves.

Reference: API Std 936, Section 5.3 - Anchor System Requirements: "Anchor installation shall be in accordance with the project drawings and specifications."

NEW QUESTION # 89

Spalling of layers from the hot surface of a refractory lining is called

- A. Crumbling
- **B. Spalling**
- C. Erosion
- D. Sheeting

Answer: B

NEW QUESTION # 90

Which of the following is a quality control element?

(This may have more than one correct answer; please select all answers that apply.)

- A. Report writing
- **B. Initial Inspection**
- **C. Installation monitoring**
- **D. As-installed testing**

Answer: B,C,D

Explanation:

According to API Std 936, the quality control program includes several essential elements to ensure compliance with material specifications and installation procedures. These elements include:

"Key quality control activities include, but are not limited to: material qualification testing, initial inspection, installation monitoring, and as-installed testing."

- API Std 936, Section 4.1, Quality Control Program

Although documentation is essential, report writing is not listed as a core quality control element within this section. Therefore, A, B, and C are the correct answers.
