1 / 5

If you still upset about your ACD201 certification exams and look for professional ACD201 learning guide materials on the internet purposelessly, it is a good way for candidates to choose our best ACD201 exam preparation materials which can help you consolidate of key knowledge effectively & quickly. Before purchasing we provide free PDF demo download for your reference. After purchasing our products, you can receive our products within 10 minutes and you have no need to spend too much time on your ACD201 Exams but obtain certification in short time.

Each product has a trial version and our products are without exception, literally means that our ACD201 guide torrent can provide you with a free demo when you browse our website of ACD201 prep guide, and we believe it is a good way for our customers to have a better understanding about our products in advance. We are committed to offer you with data protect act and guarantee you will not suffer from virus intrusion and information leakage after purchasing our ACD201 Guide Torrent. The last but not least we have professional groups providing guidance in terms of download and installment remotely.

ACD201 Trustworthy Practice - Valid ACD201 Exam Voucher

More and more people hope to enhance their professional competitiveness by obtaining ACD201 certification. However, under the premise that the pass rate is strictly controlled, fierce competition makes it more and more difficult to pass the ACD201 examination. Whether you are the first or the second or even more taking ACD201 examination, our ACD201 exam prep not only can help you to save much time and energy but also can help you pass the exam. In the other words, passing the exam once will no longer be a dream.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
Topic 2	• Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 3	• Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Topic 4	• Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.

Appian Senior Developer Sample Questions (Q59-Q64):

NEW QUESTION # 59

You need to implement a Gender dropdown, where the choice labels may need to be altered in the future. The transactional database tables rely on this data for reporting, so the data must be accurate.

What is the recommended action?

- A. Create an expression rule and modify it as per the business requirement.
- B. Create these entries in a table and reference them through a query entity rule as per the business requirement.
- C. Create a constant and modify it as needed per the business requirement.

Answer: B

Explanation:

Storing the dropdown entries in a database table and referencing them through a query entity rule ensures data integrity, flexibility for future changes, and accuracy for reporting purposes.

NEW QUESTION # 60

What are three ways to optimize the memory usage of a process model? (Choose three.)

- A. Decrease the number of process variables.
- B. Configure process variables as parameters.
- C. Pass data directly to activity nodes and smart services.
- D. Avoid storing large blocks of text in process variables.
- E. Minimize the use of subprocesses in the model.
- F. Divide large nodes into multiple smaller nodes.

Answer: B,C,D

Explanation:

Passing data directly to activity nodes and smart services reduces unnecessary use of process variables, optimizing memory.

Configuring process variables as parameters limits their lifespan and persistence, saving memory.

Avoiding large blocks of text in process variables minimizes memory consumption within the process model.

NEW QUESTION # 61

You're creating an interface object that displays a report of open cases. This interface will be used as the content of a site page.

Users in the "ACME Employees" group must be able to view the report.
Which two steps should you perform? (Choose two.)

- A. Ensure that the site page visibility permits the "ACME Employees" group to view the page.
- B. Add the "ACME Employees" group as a viewer on the folder containing the interface object.
- C. Add the "ACME Employees" group as a viewer on the site object.
- D. Include the "ACME Employees" group as a member of the "Report Viewers" system group.

Answer: A,B

Explanation:

The site page visibility must permit the "ACME Employees" group to ensure they can access the site page with the report.

The "ACME Employees" group must be added as a viewer on the folder containing the interface object to grant them access to the report interface.

NEW QUESTION # 62

You're creating a process model that will serve as the case creation workflow.

Your requirements:

This process captures input from the user before executing a series of unattended subprocess nodes.

Each subprocess performs extended data processing which is dependent on output from each of the previous nodes.

An activity chained task node is displayed asking the user if they'd like to create another case.

What should you do?

- A. Combine the separate subprocesses into one synchronous subprocess and place it in between each user input task.
- B. Configure the subprocess nodes to run asynchronously and set the inputs to pass as reference to enable data sharing.
- C. Add an AND gate after the first user input task and place the synchronous subprocess nodes on a parallel path.

Answer: A

Explanation:

Combining the separate subprocesses into one synchronous subprocess and placing it between each user input task ensures each subprocess's output is available for the next step, maintaining data dependencies and supporting the required user experience with activity chaining.

NEW QUESTION # 63

You're creating a synced record type which will store read-only data from an external web service. Data in the external system is updated nightly, and the latest information must be available to users in the morning.

Currently there are approximately 150,000 entries in the external system, and this number is not expected to change significantly.

There is an existing integration object and associated expression rule, which when called returns the complete dataset from the external system.

What are two configurations that you must apply to ensure that the latest and complete record set is available?

(Choose two.)

- A. Set all record fields to evaluate in real-time so that the latest information is always retrieved from the web service.
- B. Within the record type, schedule a full sync to occur nightly after the data is refreshed in the external system.
- C. Within the Source Filters settings on the record type, disable the row limit option so that all entries can be retrieved from the external system.
- D. Modify the integration object and associated expression rule to return batches of 1000 based on a batch number passed in from the record type.

Answer: B,C

Explanation:

Scheduling a nightly full sync ensures the record type is updated with the latest data after the external system refreshes.

Disabling the row limit in Source Filters allows the complete dataset to be retrieved and synced, ensuring all entries are available.

NEW QUESTION # 64

.....

[illegible]
