Apple-Device-Support Reliable Test Experience | Test Apple-Device-Support Result

The time and energy are all very important for the office workers. In order to get the Apple-Device-Support certification with the less time and energy investment, you need a useful and valid Apple study material for your preparation. Apple-Device-Support free download pdf will be the right material you find. The comprehensive contents of Apple-Device-Support practice torrent can satisfied your needs and help you solve the problem in the actual test easily. Now, choose our Apple-Device-Support study practice, you will get high scores.

Apple Device Support Exam Sample Questions (Q125-Q130):

NEW QUESTION # 125

Safari profiles aren't syncing between a user's Mac and iPhone. What should you verify on the user's devices to resolve this issue?

- **A. Safari is turned on in the iCloud section of Apple Account settings.**
- B. Safari extensions are turned on in the iCloud section of Apple Account settings.
- C. Private Relay is turned on in the iCloud section of Apple Account settings.
- D. Profile syncing is turned on for the Apple Account.

Answer: A

Explanation:

Safari profiles (introduced in iOS 17/macOS Sonoma) allow users to separate browsing data (e.g., tabs, bookmarks) and sync them via iCloud. For syncing to work between a Mac and iPhone, Safari must be enabled in the iCloud settings on both devices (Settings > [user name] > iCloud on iPhone; System Settings > [user name] > iCloud on Mac). This toggle ensures bookmarks, history, tabs, and profiles sync.

* Option A is vague; there's no specific "Profile syncing" setting-Safari syncing covers profiles.

* Option B (Safari extensions) isn't required for profile syncing; extensions sync separately.

* Option C is correct, as disabling Safari in iCloud stops all Safari data syncing.

* Option D (Private Relay) enhances privacy but doesn't affect syncing. Verify this in Apple's "Set up and use iCloud Tabs" (support.apple.com/HT202530), which extends to profiles.

NEW QUESTION # 126

Use this image to answer the question.

Why is the screen sharing service disabled with the message "This service is currently unavailable"?

- A. Screen sharing is being controlled by the remote management service.
- B. Screen sharing is being controlled by the remote login service.
- C. TCP and UDP ports 5900 are currently blocked on this network.
- D. An internet connection is currently unavailable.

Answer: A

NEW QUESTION # 127

Select Four.

What file system formats are available in Disk Utility on a Mac

- A. NTFS
- B. MS-DOS (FAT)
- C. APFS
- D. Mac OS Extended
- E. ExFat
- F. GFS

Answer: B,C,D,E

NEW QUESTION # 128

Scenario

Antonio recently bought his iPhone 14 Pro Max. It's taking over an hour to charge the device to 50% using his 5W USB power adapter that came with his previous iPhone.

Why can't Antonio fast charge his iPhone?

- A. Fast charging requires a 61W or higher power adapter.
- **B. Fast charging requires a 20W or higher power adapter.**
- C. Fast charging isn't supported on iPhone 14 Pro Max.
- D. Fast charging iPhone 14 Pro Max to 50% takes more than 60 minutes.

Answer: B

Explanation:

Antonio can't fast charge his iPhone 14 Pro Max using his 5W USB power adapter because it doesn't support the USB Power Delivery (USB-PD) protocol that enables fast charging. To fast charge his iPhone 14 Pro Max, he needs a 20W or higher power adapter that supports USB-PD, such as the Apple 20W USB-C Power Adapter¹ or a comparable third-party adapter. With a 20W or higher power adapter, he can charge his iPhone

14 Pro Max up to 50% battery in around 30 minutes². Fast charging is supported on all iPhone 14 models, as well as iPhone 13, iPhone 12, iPhone 11, iPhone SE (2nd generation), iPhone X, iPhone 8, and later models². References: Apple 20W USB-C Power Adapter - Apple, Fast charge your iPhone - Apple Support

NEW QUESTION # 129

What does your Mac use to broadcast its location information after you turn on Find My when it's offline or in sleep mode?

- **A. Bluetooth**
- B. Emergency SOS
- C. Wi-Fi
- D. Ultra Wideband (UWB)

Answer: A

Explanation:

Your Mac uses Bluetooth to broadcast its location information after you turn on Find My when it's offline or in sleep mode. This is part of the Find My network, which is an encrypted, anonymous network of hundreds of millions of Apple devices that can help you locate your device, even when it's offline¹. When your Mac is offline or in sleep mode, it sends out a secure Bluetooth signal that can be detected by other Apple devices nearby. These devices relay the location of your Mac to iCloud so you can view it in the Find My app². The other options, Ultra Wideband (UWB), Emergency SOS, and Wi-Fi, are not used by your Mac to broadcast its location information in this scenario.
