

ARA-C01 PDF Demo, ARA-C01 Lernhilfe

Übrigens, Sie können die vollständige Version der EchteFrage ARA-C01 Prüfungsfragen aus dem Cloud-Speicher herunterladen:
<https://drive.google.com/open?id=1uvJnbgcWjBtmnEgwPaWnP6bXnuWfWeXH>

Unsere Snowflake ARA-C01 Prüfungsunterlage (SnowPro Advanced Architect Certification) enthalten alle echten, originalen und richtigen Fragen und Antworten. Die Abdeckungsrate unserer Snowflake ARA-C01 Unterlagen (Fragen und Antworten) (SnowPro Advanced Architect Certification) ist normalerweise mehr als 98%.

EchteFrage hat riesige Expertenteam, die Ihnen gültige Schulungsressourcen bieten. Sie haben die Snowflake ARA-C01 (SnowPro Advanced Architect Certification) Prüfungen in den letzten Jahren nach ihren Erfahrungen und Kenntnissen untersucht. Und endlich kommen die zielgerichteten Fragen und Antworten auf, die den IT-Kandidaten große Hilfe bieten. Nun können Sie im Internet Demo zur Snowflake ARA-C01 (SnowPro Advanced Architect Certification) Zertifizierungsprüfung kostenlos herunterladen. Viele IT-Fachleute haben bewiesen, dass EchteFrage sehr zuverlässig ist. Wenn Sie die zielgerichteten Prüfungsfragen von EchteFrage benutzt haben, können Sie normalerweise die Snowflake ARA-C01 Zertifizierungsprüfung bestehen. Schicken Sie doch die Produkte von EchteFrage in den Warenkorb. Sie werden sehr wahrscheinlich der nächste erfolgreiche IT-Fachmann.

ARA-C01 Lernhilfe, ARA-C01 Vorbereitungsfragen

EchteFrage zusammengestellt Snowflake ARA-C01 Fragen und Antworten mit originalen Prüfungsfragen und präzisen Antworten, wie sie in der eigentlichen Prüfung erscheinen. Wir aktualisieren regelmäßig diese qualitativ hochwertigen ARA-C01 Prüfung SnowPro Advanced Architect Certification. EchteFrage ernannt nur die besten und kompetentesten Autoren für unsere Produkte, daher sind die ARA-C01 Prüfungsfragen und Antworten (SnowPro Advanced Architect Certification) aus EchteFrage sicherlich perfekt.

Snowflake SnowPro Advanced Architect Certification ARA-C01 Prüfungsfragen mit Lösungen (Q89-Q94):

89. Frage

A large manufacturing company runs a dozen individual Snowflake accounts across its business divisions.

The company wants to increase the level of data sharing to support supply chain optimizations and increase its purchasing leverage

with multiple vendors.

The company's Snowflake Architects need to design a solution that would allow the business divisions to decide what to share, while minimizing the level of effort spent on configuration and management. Most of the company divisions use Snowflake accounts in the same cloud deployments with a few exceptions for European-based divisions.

According to Snowflake recommended best practice, how should these requirements be met?

- A. Deploy a Private Data Exchange and use replication to allow European data shares in the Exchange.
- B. Deploy a Private Data Exchange in combination with data shares for the European accounts.
- C. Deploy to the Snowflake Marketplace making sure that `invoker_share()` is used in all secure views.
- D. Migrate the European accounts in the global region and manage shares in a connected graph architecture. Deploy a Data Exchange.

Antwort: A

Begründung:

According to Snowflake recommended best practice, the requirements of the large manufacturing company should be met by deploying a Private Data Exchange in combination with data shares for the European accounts. A Private Data Exchange is a feature of the Snowflake Data Cloud platform that enables secure and governed sharing of data between organizations. It allows Snowflake customers to create their own data hub and invite other parts of their organization or external partners to access and contribute data sets. A Private Data Exchange provides centralized management, granular access control, and data usage metrics for the data shared in the exchange¹. A data share is a secure and direct way of sharing data between Snowflake accounts without having to copy or move the data. A data share allows the data provider to grant privileges on selected objects in their account to one or more data consumers in other accounts². By using a Private Data Exchange in combination with data shares, the company can achieve the following benefits:

- * The business divisions can decide what data to share and publish it to the Private Data Exchange, where it can be discovered and accessed by other members of the exchange. This reduces the effort and complexity of managing multiple data sharing relationships and configurations.
- * The company can leverage the existing Snowflake accounts in the same cloud deployments to create the Private Data Exchange and invite the members to join. This minimizes the migration and setup costs and leverages the existing Snowflake features and security.
- * The company can use data shares to share data with the European accounts that are in different regions or cloud platforms. This allows the company to comply with the regional and regulatory requirements for data sovereignty and privacy, while still enabling data collaboration across the organization.
- * The company can use the Snowflake Data Cloud platform to perform data analysis and transformation on the shared data, as well as integrate with other data sources and applications. This enables the company to optimize its supply chain and increase its purchasing leverage with multiple vendors.

90. Frage

You have created a table as below

```
CREATE TABLE SNOWFLAKE_BLOG(BLOG_ID NUMBER, BLOG_CONTENT VARCHAR,BLOG_AUTHOR  
VARCHAR,BLOG_CREATE_DATE TIMESTAMP );
```

Now you want to cluster it by `BLOG_AUTHOR` and `BLOG_CREATE_DATE`.

Which command below will you choose?

- A. `ALTER TABLE SNOWFLAKE_BLOG CLUSTER BY (BLOG_AUTHOR)`
- B. `ALTER TABLE SNOWFLAKE_BLOG CLUSTER BY (BLOG_CREATE_DATE);`
- C. `ALTER TABLE SNOWFLAKE_BLOG CLUSTER BY (BLOG_AUTHOR, BLOG_CREATE_DATE);`

Antwort: C

91. Frage

What actions are permitted when using the Snowflake SQL REST API? (Select TWO).

- A. Submitting multiple SQL statements in a single call
- B. The use of a `CALL` command to a stored procedure which returns a table
- C. The use of a `GET` command
- D. The use of a `PUT` command
- E. The use of a `ROLLBACK` command

Antwort: B,C

Begründung:

A: The Snowflake SQL REST API does support the use of a GET command, which can be used to retrieve the status of a previously submitted query or to fetch the results of a query once it has been executed. D. The use of a CALL command to a stored procedure is supported, which can return a result set, including a table. This allows the invocation of stored procedures within Snowflake through the SQL REST API.

92. Frage

A healthcare company wants to share data with a medical institute. The institute is running a Standard edition of Snowflake; the healthcare company is running a Business Critical edition. How can this data be shared?

- A. The healthcare company will need to change the institute's Snowflake edition in the accounts panel.
- **B. Set the share_restriction parameter on the shared object to false.**
- C. Contact Snowflake and they will execute the share request for the healthcare company.
- D. By default, sharing is supported from a Business Critical Snowflake edition to a Standard edition.

Antwort: B

Begründung:

By default, Snowflake does not allow sharing data from a Business Critical edition to a non-Business Critical edition. This is because Business Critical edition provides enhanced security and data protection features that are not available in lower editions. However, this restriction can be overridden by setting the share_restriction parameter on the shared object (database, schema, or table) to false. This parameter allows the data provider to explicitly allow sharing data with lower edition accounts. Note that this parameter can only be set by the data provider, not the data consumer. Also, setting this parameter to false may reduce the level of security and data protection for the shared data.

Reference:

Enable Data Share: Business Critical Account to Lower Edition

Sharing Is Not Allowed From An Account on BUSINESS CRITICAL Edition to an Account On A Lower Edition SQL Execution Error: Sharing is Not Allowed from an Account on BUSINESS CRITICAL Edition to an Account on a Lower Edition Snowflake Editions | Snowflake Documentation

93. Frage

A group of Data Analysts have been granted the role analyst role. They need a Snowflake database where they can create and modify tables, views, and other objects to load with their own data. The Analysts should not have the ability to give other Snowflake users outside of their role access to this data.

How should these requirements be met?

- **A. Make every schema in the database a managed access schema, owned by SYSADMIN, and grant create privileges on each schema to the ANALYST_ROLE for each type of object that needs to be created.**
- B. Grant SYSADMIN ownership of the database, but grant the create schema privilege on the database to the ANALYST_ROLE.
- C. Grant ANALYST_ROLE ownership on the database, but grant the ownership on future [object type] s in database privilege to SYSADMIN.
- D. Grant ANALYST_ROLE OWNERSHIP on the database, but make sure that ANALYST_ROLE does not have the MANAGE GRANTS privilege on the account.

Antwort: A

Begründung:

The requirements state that the data analysts need to be able to create and modify database objects and load data, but should not be able to manage access for users outside of their role.

Option C: By making each schema within the database a managed access schema and having them owned by SYSADMIN, the ability to grant privileges on the schema's objects is strictly controlled. Managed access schemas limit the granting of privileges to the role specified as the owner of the schema, in this case, SYSADMIN. The ANALYST_ROLE can be granted the privileges necessary to create and modify objects within these schemas, satisfying the requirement for the analysts to perform their tasks without being able to extend access beyond their role.
