ASQ CMQ-OE Certification Exam Structure and Guidelines

By and large, candidates have the option of sitting for the official exam in person or the computer-delivered test. The paper version is

a four-hour exam comprising 165 multiple-choice questions that may be delivered in both English and Mandarin. On the other hand, the duration of the computer-delivered evaluation is 4 hours 18 minutes and it encompasses 180 multiple-choice questions. However, only 165 items will be scored and the remaining 15 will be not. It is also important to note that the computer-delivered exam is only conducted in English. Both versions are open-book exams and therefore candidates are permitted to take reference materials. ASQ does not have a predetermined passing score for the exam. The score varies each time a Body of Knowledge (BoK) is created and is determined through a procedure called “cut score study”, where a group of experts determines the passing score. More so, candidates are charged an exam fee of USD 568 whereas members of ASQ are charged only USD 468. If a candidate fails the exam, he/she can resit for the test at a retake rate of USD 368. All in all, the vendor provides a range of learning materials for candidates to prepare for the actual evaluation. These include study guides, textbooks, sample questions, etc.

ASQ Certified Manager of Quality/Organizational Excellence Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54

Which of the following factors should be considered in the interpretation of a histogram?

- A. Correction coefficient
- **B. Shape**
- C. Stratification
- D. Control limits

Answer: B

Explanation:

A histogram is a graphical representation of the frequency distribution of numerical data. When interpreting a histogram, several factors are relevant:

* Shape: The shape of the histogram provides insights into the distribution of the data. Common shapes include:

* Normal Distribution (Bell-shaped Curve): Indicates that the data is symmetrically distributed around the mean. This is often desirable.

* Skewed Distribution (Positively or Negatively): Shows an asymmetrical distribution where one tail is longer than the other. Skewness affects process performance.

* Bimodal Distribution: Indicates two distinct peaks, suggesting multiple underlying processes or modes.

* Uniform Distribution: Represents data evenly spread across the range.

* Other Irregular Shapes: May indicate specific patterns or issues.

* Stratification: While not directly related to the histogram itself, stratification refers to dividing data into subgroups based on specific criteria. Stratified histograms can reveal variations within different segments of the data.

* Control Limits: Control limits are not part of the histogram but are essential for process control. They define the acceptable range of variation. If data points fall outside the control limits, it signals potential issues.

* Correction Coefficient: There is no concept of a "correction coefficient" specifically related to histograms. However, understanding the data's context and any necessary adjustments (such as correcting for bias or measurement errors) is crucial.

In summary, the shape of the histogram is a critical factor in interpreting the data distribution, but considering other contextual factors is equally important.

NEW QUESTION # 55

Is a person from outside the organization who has been hired to advise and help facilitate the change process?

He/she has greater degree of freedom and should be better able to access activities and provide honest feedback.

- A. Business Generator
- **B. Change agent**
- C. Mentor
- D. Ethicist

Answer: B

NEW QUESTION # 56

Which of the following elements is critical to teams being successful?

- A. They establish long-range goals.
- B. They establish weekly targets and plans
- C. They start with corporate objectives.
- **D. They agree on their mission or purpose.**

Answer: D

Explanation:

The image depicts a flow chart that outlines the steps and timeline of a project, which is characteristic of a Gantt chart. A Gantt chart is used for project management to display the phases or tasks of a project and their respective timelines, allowing managers to track progress visually. In contrast, PERT (Program Evaluation Review Technique) charts are network diagrams used for scheduling, organizing, and coordinating tasks within a project; Pareto charts visualize the frequency of problems or causes in a process; Shewhart charts are control charts used in statistical quality control. NEW QUESTION # 57

A recent employee survey included individual comments indicating that some employees are having to decide whether to follow a written procedure or do something contrary to procedure b their supervisor or manager told them to do it differently. In this situation, the first action the quality manager should take is to

- A. discuss the matter with mid-level managers
- B. initiate appropriate changes to the procedures being violated
- **C. discuss the matter with the quality council or senior management**
- D. quantify and verify the survey findings

Answer: C

Explanation:

When faced with conflicting information between written procedures and instructions from supervisors or managers, the quality manager should engage in open communication. Discussing the matter with mid-level managers allows for clarification, understanding the context, and addressing any discrepancies. It is essential to seek alignment and resolve conflicts through effective communication within the organization. Once the issue is understood, appropriate actions, such as updating procedures or providing additional guidance, can be taken.
