The TrainingDump is committed to making the entire Google Associate-Cloud-Engineer exam preparation process instant and successful. To achieve these objectives the TrainingDump is offering real, valid, and updated Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam practice test questions in three high in demand formats. These formats are Google Associate-Cloud-Engineer PDF dumps files, desktop practice test software, and web-based practice test software.

To prepare for the exam, candidates can take advantage of Google's training resources, including online courses and hands-on labs. Additionally, there are many third-party resources available, such as study guides and practice exams, that can help candidates prepare for the exam. It is recommended that candidates have at least six months of experience working with Google Cloud technologies before taking the exam.

The Google Associate-Cloud-Engineer Exam covers a range of topics, including setting up a cloud solution environment, deploying and implementing cloud solutions, configuring access and security, monitoring and logging cloud operations, and managing cloud resources. It is a comprehensive exam that requires a strong understanding of Google Cloud technologies and their applications.

Target audience and other prerequisites

This certification is intended for the Cloud Engineers who know how to plan and configure Cloud solutions, install Cloud solution environments, implement and deploy Cloud solutions, configure security and access, ensure the successful operation of Cloud solutions.

There are no official requirements for this certificate and its qualifying test. However, before taking the certification exam, it is recommended that you possess at least six months of practical experience with Google Cloud solutions and products.

Cloud-Engineer Tools

As most of the people tend to use express delivery to save time, our Associate-Cloud-Engineer preparation exam will be sent out within 5-10 minutes after purchasing. As long as you pay at our platform, we will deliver the relevant exam materials to your mailbox within the given time. Our company attaches great importance to overall services, if there is any problem about the delivery of Associate-Cloud-Engineer Exam Materials: Google Associate Cloud Engineer Exam, please let us know, a message or an email will be available.

Google Associate Cloud Engineer Exam Sample Questions (Q262-Q267):

NEW QUESTION # 262

You have a developer laptop with the Cloud SDK installed on Ubuntu. The Cloud SDK was installed from the Google Cloud Ubuntu package repository. You want to test your application locally on your laptop with Cloud Datastore. What should you do?

- A. Install the google-cloud-sdk-datastore-emulator component using the apt get install command.
- B. Create a Cloud Datastore index using gcloud datastore indexes create.
- C. Export Cloud Datastore data using gcloud datastore export.
- D. Install the cloud-datastore-emulator component using the gcloud components install command.

Answer: D

Explanation:

* The Datastore emulator provides local emulation of the production Datastore environment. You can use the emulator to develop and test your application locally. Ref: <https://cloud.google.com/datastore/docs/tools/datastore-emulator>

NEW QUESTION # 263

You have been asked to create robust Virtual Private Network (VPN) connectivity between a new Virtual Private Cloud (VPC) and a remote site. Key requirements include dynamic routing, a shared address space of 10.19.0.1/22, and no overprovisioning of tunnels during a failover event. You want to follow Google-recommended practices to set up a high availability Cloud VPN. What should you do?

- A. Use a custom mode VPC network, configure static routes, and use active/passive routing
- B. Use a custom mode VPC network use Cloud Router border gateway protocol (BGP) routes, and use active/passive routing
- C. Use an automatic mode VPC network, configure static routes, and use active/active routing
- D. Use an automatic mode VPC network, use Cloud Router border gateway protocol (BGP) routes and configure policy-based routing

Answer: B

Explanation:

<https://cloud.google.com/network-connectivity/docs/vpn/concepts/best-practices>

NEW QUESTION # 264

Your organization has user identities in Active Directory. Your organization wants to use Active Directory as their source of truth for identities. Your organization wants to have full control over the Google accounts used by employees for all Google services, including your Google Cloud Platform (GCP) organization. What should you do?

- A. Use the cloud Identity APIs and write a script to synchronize users to Cloud Identity.
- B. Ask each employee to create a Google account using self signup. Require that each employee use their company email address and password.
- C. Export users from Active Directory as a CSV and import them to Cloud Identity via the Admin Console.
- D. Use Google Cloud Directory Sync (GCDS) to synchronize users into Cloud Identity.

Answer: D

Explanation:

NEW QUESTION # 265

A colleague handed over a Google Cloud Platform project for you to maintain. As part of a security checkup, you want to review who has been granted the Project Owner role. What should you do?

- A. Use the command `gcloud projects get-iam-policy` to view the current role assignments.
- B. Enable Audit Logs on the IAM & admin page for all resources, and validate the results.
- C. In the console, validate which SSH keys have been stored as project-wide keys.
- D. Navigate to Identity-Aware Proxy and check the permissions for these resources.

Answer: C

Explanation:

Explanation/Reference: <https://cloud.google.com/compute/docs/instances/adding-removing-ssh-keys>

NEW QUESTION # 266

Your Dataproc cluster runs in a single Virtual Private Cloud (VPC) network in a single subnet with range 172.16.20.128/25. There are no private IP addresses available in the VPC network. You want to add new VMs to communicate with your cluster using the minimum number of steps.

What should you do?

- A. Create a new VPC network for the VMs.
Enable VPC Peering between the VMs' VPC network and the Dataproc cluster VPC network.
- B. Create a new VPC network for the VMs with a subnet of 172.32.0.0/16.
Enable VPC network Peering between the Dataproc VPC network and the VMs VPC network.
Configure a custom Route exchange.
- C. Create a new Secondary IP Range in the VPC and configure the VMs to use that range.
- D. Modify the existing subnet range to 172.16.20.0/24.

Answer: D

Explanation:

`gcloud compute networks subnets expand-ip-range`

NAME

`gcloud compute networks subnets expand-ip-range -` expand the IP range of a Compute Engine subnetwork

NEW QUESTION # 267

.....

The experts in our company have been focusing on the Associate-Cloud-Engineer examination for a long time and they never overlook any new knowledge. The content of our Associate-Cloud-Engineer study materials has always been kept up to date. We will inform you by E-mail when we have a new version. With our great efforts, our Associate-Cloud-Engineer practice dumps have been narrowed down and targeted to the Associate-Cloud-Engineer examination. We can ensure you a pass rate as high as 99%!
