Valid Braindumps Google Associate-Cloud-Engineer Files, Sample Associate-Cloud-Engineer Questions Answers

Before making a final purchase, ActualTorrent customers can try the features of the Associate-Cloud-Engineer practice material with a free demo. If a customer purchases our Associate-Cloud-Engineer exam preparation material, we will provide them with Free Associate-Cloud-Engineer Exam Questions updates for up to 1 year. If the Associate-Cloud-Engineer certification test content changes after your purchase within 1 year, you will instantly get free real questions updates.

Upon passing the Google Associate Cloud Engineer certification exam, you will receive a certificate that demonstrates your proficiency in operating and deploying applications, infrastructure, and services on the Google Cloud Platform. Google Associate Cloud Engineer Exam certification can help boost your career prospects, as it is recognized by employers and demonstrates that you have a strong understanding of cloud computing and the Google Cloud Platform.

Google Associate Cloud Engineer Exam Sample Questions (Q88-Q93):

NEW QUESTION # 88
You have a Compute Engine instance hosting a production application. You want to receive an email if the instance consumes more than 90% of its CPU resources for more than 15 minutes. You want to use Google services. What should you do?

- A. 1. Create a consumer Gmail account.2.Write a script that monitors the CPU usage.3.When the CPU usage exceeds the threshold, have that script send an email using the Gmail account and smtp.gmail.
  com on port 25 as SMTP server.
- B. 1. Create a Stackdriver Workspace, and associate your Google Cloud Platform (GCP) project with it.2.
  Create an Alerting Policy in Stackdriver that uses the threshold as a trigger condition.3.Configure your email address in the notification channel.
- C. 1. In Stackdriver Logging, create a logs-based metric to extract the CPU usage by using this regular expression: CPU Usage: ([0-9] {1,3}) %2.In Stackdriver Monitoring, create an Alerting Policy based on this metric.3.Configure your email address in the notification channel.
- D. 1. Create a Stackdriver Workspace, and associate your GCP project with it.2.Write a script that monitors the CPU usage and sends it as a custom metric to Stackdriver.3.Create an uptime check for the instance in Stackdriver.

Answer: B

Explanation:
Specifying conditions for alerting policies This page describes how to specify conditions for alerting policies.
The conditions for an alerting policy define what is monitored and when to trigger an alert. For example, suppose you want to define an alerting policy that emails you if the CPU utilization of a Compute Engine VM instance is above 80% for more than 3 minutes.
You use the conditions dialog to specify that you want to monitor the CPU utilization of a Compute Engine VM instance, and that you want an alerting policy to trigger when that utilization is above 80% for 3 minutes.https://cloud.google.com/monitoring/alerts/ui-conditions-ga

/notification-options

NEW QUESTION # 89
You are monitoring an application and receive user feedback that a specific error is spiking. You notice that the error is caused by a Service Account having insufficient permissions. You are able to solve the problem but want to be notified if the problem recurs. What should you do?

- A. Create a sink to BigQuery to export all the logs.
  Create a Data Studio dashboard on the exported logs.
- B. In the Log Viewer, filter the logs on severity `Error' and the name of the Service Account.
- C. Create a custom log-based metrics for the specific error to be used in an Alerting Policy.
- D. Grant Project Owner access to the Service Account.

Answer: C

Explanation:
Just checked in GC Console. Created custom log-based metric and set up an allert.

NEW QUESTION # 90
You are developing a new web application that will be deployed on Google Cloud Platform. As part of your release cycle, you want

to test updates to your application on a small portion of real user traffic. The majority of the users should still be directed towards a stable version of your application. What should you do?

- A. Deploy me application on App Engine For each update, create a new version of the same service Configure traffic splitting to send a small percentage of traffic to the new version
- B. Deploy the application on App Engine For each update, create a new service Configure traffic splitting to send a small percentage of traffic to the new service.
- C. Deploy the application on Kubernetes Engine For a now release, create a new deployment for the new version Update the service e to use the now deployment.
- D. Deploy the application on Kubernetes Engine For a new release, update the deployment to use the new version

Answer: C

Explanation:
Keyword, Version, traffic splitting, App Engine supports traffic splitting for versions before releasing.

NEW QUESTION # 91
You have an application on a general-purpose Compute Engine instance that is experiencing excessive disk read throttling on its Zonal SSD Persistent Disk. The application primarily reads large files from disk. The disk size is currently 350 GB. You want to provide the maximum amount of throughput while minimizing costs. What should you do?

- A. Increase the size of the disk to 1 TB.
- B. Increase the allocated CPU to the instance.
- C. Migrate to use a Regional SSD on the instance.
- D. Migrate to use a Local SSD on the instance.

Answer: D

Explanation:
Explanation/Reference: https://cloud.google.com/compute/docs/disks/performance

NEW QUESTION # 92
You have created an application that is packaged into a Docker image. You want to deploy the Docker image as a workload on Google Kubernetes Engine. What should you do?

- A. Upload the image to Container Registry and create a Kubernetes Deployment referencing the image.
- B. Upload the image to Container Registry and create a Kubernetes Service referencing the image.
- C. Upload the image to Cloud Storage and create a Kubernetes Deployment referencing the image.
- D. Upload the image to Cloud Storage and create a Kubernetes Service referencing the image.

Answer: A

Explanation:
A deployment is responsible for keeping a set of pods running. A service is responsible for enabling network access to a set of pods.
