

Associate-Cloud-Engineer Test King & Associate-Cloud-Engineer New Dumps Questions

2025 Latest Actual4dump Associate-Cloud-Engineer PDF Dumps and Associate-Cloud-Engineer Exam Engine Free Share:
<https://drive.google.com/open?id=1AKhe4N7aosMs7UIRZWb5mt4tHSVxRkFF>

As is known to all, before purchasing the Associate-Cloud-Engineer Study Guide, we need to know the features of it. We offer you free demo to have a try, so that you can know the characteristics of Associate-Cloud-Engineer exam dumps. Beside we have three versions, each version have its own advantages, and they can meet all of your demands. And we have free update for 365 days after buying, the latest version will send to you email box automatically.

With the help of the Google Associate-Cloud-Engineer brain dumps and preparation material provided by Actual4dump, you will be able to get Google Google Cloud Certified certified at the first attempt. Our Google experts have curated an amazing Associate-Cloud-Engineer exam guide for passing the Associate-Cloud-Engineer Exam. You can get the desired outcome by preparing yourself from the Associate-Cloud-Engineer exam dumps material provided by Actual4dump. We frequently update our Associate-Cloud-Engineer exam preparation material to reflect the latest changes in the Associate-Cloud-Engineer exam syllabus.

>> Associate-Cloud-Engineer Test King <<

100% Pass Quiz Associate-Cloud-Engineer - Useful Google Associate Cloud Engineer Exam Test King

The modern Google world is changing its dynamics at a fast pace. With the Google Associate-Cloud-Engineer certification, you can learn these changes and stay updated all the time. There are other countless Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) certification exam benefits that you can gain after passing the exam. The prominent Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) certification exam benefits are validation of skills, more career opportunity, salary increment, and the opportunity to become a member of the Google community.

Google Associate Cloud Engineer Exam Sample Questions (Q145-Q150):

NEW QUESTION # 145

Your managed instance group raised an alert stating that new instance creation has failed to create new instances. You need to

maintain the number of running instances specified by the template to be able to process expected application traffic. What should you do?

- A. Delete the current instance template and replace it with a new instance template. Verify that the instance name and persistent disk name values are not the same in the template. Set the disks.autoDelete property to true in the instance template.
- B. Create an instance template that contains valid syntax which will be used by the instance group. Delete any persistent disks with the same name as instance names.
- **C. Verify that the instance template being used by the instance group contains valid syntax. Delete any persistent disks with the same name as instance names. Set the disks.autoDelete property to true in the instance template.**
- D. Create an instance template that contains valid syntax that will be used by the instance group. Verify that the instance name and persistent disk name values are not the same in the template.

Answer: C

Explanation:

Reference:

NEW QUESTION # 146

Your development team needs a new Jenkins server for their project. You need to deploy the server using the fewest steps possible. What should you do?

- **A. Use GCP Marketplace to launch the Jenkins solution.**
- B. Create a Kubernetes cluster on Compute Engine and create a deployment with the Jenkins Docker image.
- C. Download and deploy the Jenkins Java WAR to App Engine Standard.
- D. Create a new Compute Engine instance and install Jenkins through the command line interface.

Answer: A

NEW QUESTION # 147

Users of your application are complaining of slowness when loading the application. You realize the slowness is because the App Engine deployment serving the application is deployed in us-central whereas all users of this application are closest to europe-west3. You want to change the region of the App Engine application to europe-west3 to minimize latency. What's the best way to change the App Engine region?

- A. Use the gcloud app region set command and supply the name of the new region.
- B. From the console, under the App Engine page, click edit, and change the region drop-down.
- **C. Create a new project and create an App Engine instance in europe-west3**
- D. Contact Google Cloud Support and request the change.

Answer: C

Explanation:

Explanation

App engine is a regional service, which means the infrastructure that runs your app(s) is located in a specific region and is managed by Google to be redundantly available across all the zones within that region. Once an app engine deployment is created in a region, it cant be changed. The only way is to create a new project and create an App Engine instance in europe-west3, send all user traffic to this instance and delete the app engine instance in us-central.

NEW QUESTION # 148

(Your company was recently impacted by a service disruption that caused multiple Dataflow jobs to get stuck, resulting in significant downtime in downstream applications and revenue loss. You were able to resolve the issue by identifying and fixing an error you found in the code. You need to design a solution with minimal management effort to identify when jobs are stuck in the future to ensure that this issue does not occur again.

What should you do?)

- A. Update the Dataflow job configurations to send messages to a Pub/Sub topic when there are delays. Configure a backup Dataflow job to process jobs that are delayed. Use Cloud Tasks to trigger an alert when messages are pushed to the Pub/Sub topic.
- **B. Set up Cloud Monitoring alerts on the data freshness metric for the Dataflow jobs to receive a notification when a certain threshold is reached.**
- C. Set up Error Reporting to identify stack traces that indicate slowdowns in Dataflow jobs. Set up alerts based on these log entries.
- D. Use the Personalized Service Health dashboard to identify issues with Dataflow jobs across regions.

Answer: B

Explanation:

Comprehensive and Detailed In Depth Explanation:

The goal is to proactively identify stuck Dataflow jobs with minimal management effort. Let's analyze each option:

A). Error Reporting for slowdowns: Error Reporting primarily focuses on capturing and aggregating exceptions and errors (stack traces). While a stuck job might eventually throw an error, it might also just become unresponsive without generating explicit errors. Relying solely on Error Reporting might not provide timely detection of stuck jobs. Identifying stack traces that indicate slowdowns can also be complex and require significant manual configuration and analysis.

B). Personalized Service Health dashboard: The Personalized Service Health dashboard provides information about Google Cloud service incidents that might be affecting your resources. While it can alert you to broader Dataflow service outages, it won't specifically identify individual stuck jobs due to application-level errors or logic within your Dataflow pipeline.

C). Pub/Sub messages for delays, backup job, and Cloud Tasks alerts: This approach involves significant custom implementation and management. You would need to instrument your Dataflow jobs to detect delays, send messages to Pub/Sub, manage a backup job, and configure Cloud Tasks for alerting. This adds considerable operational overhead and complexity.

D). Cloud Monitoring alerts on data freshness metric: Dataflow provides built-in metrics, including "data freshness" (or similar metrics like "system lag" or "processing time"), which indicate how far behind the pipeline is in processing data. If a job gets stuck, the data freshness will deteriorate beyond an acceptable threshold. Cloud Monitoring allows you to easily set up alerts based on these built-in metrics. This requires minimal custom coding and leverages the platform's existing monitoring capabilities, aligning with the "minimal management effort" requirement.

Therefore, setting up Cloud Monitoring alerts on relevant Dataflow metrics like data freshness is the most efficient and recommended way to detect stuck Dataflow jobs with minimal management overhead.

Google Cloud Documentation References:

Monitoring Dataflow Pipelines: <https://cloud.google.com/dataflow/docs/guides/monitoring-your-pipeline> - This document details the various metrics available for monitoring Dataflow jobs in Cloud Monitoring, including metrics related to processing time, system lag, and data freshness.

Creating Alerts in Cloud Monitoring: <https://cloud.google.com/monitoring/alerts/create> - Explains how to set up alerts based on metrics collected by Cloud Monitoring.

Dataflow Metrics: <https://cloud.google.com/dataflow/docs/reference/monitoring-metrics> - Provides a comprehensive list of Dataflow metrics that can be used for monitoring and alerting.

NEW QUESTION # 149

What is the gcloud command to create a cluster named ch09-cluster-10 with four nodes?

- A. gcloud container clusters create ch09-cluster-10 4
- B. gcloud clusters container create ch09-cluster-10 --num-nodes=4
- **C. gcloud container clusters create ch09-cluster-10 --num-nodes=4**
- D. gcloud container clusters create ch09-cluster-10 --nodes-num=4

Answer: C

NEW QUESTION # 150

.....

We have a bold idea that we will definitely introduce our Associate-Cloud-Engineer study materials to the whole world and make all people that seek fortune and better opportunities have access to realize their life value. Our Associate-Cloud-Engineer practice questions, therefore, is bound to help you pass through the Associate-Cloud-Engineer Exam and win a better future. We will also continuously keep a pioneering spirit and are willing to tackle any project that comes your way. Our Associate-Cloud-Engineer training materials will never let you down for its wonderful quality.

Associate-Cloud-Engineer New Dumps Questions: <https://www.actual4dump.com/Google/Associate-Cloud-Engineer-actualtests-dumps.html>

Our website provides you with accurate valid Associate-Cloud-Engineer exam pdf and Associate-Cloud-Engineer valid vce for your preparation, which ensure you pass the Associate-Cloud-Engineer real exams smoothly, Google Associate-Cloud-Engineer Test King Do you offer discounts on your products, Our Exam Associate-Cloud-Engineer Preparation Material provides you everything you will need to take your Associate-Cloud-Engineer Exam, Google Associate-Cloud-Engineer Test King When you have something to go out, you can study with your mobile phone and handouts.

If route maps are applied in a policy-routing environment, packets that Associate-Cloud-Engineer New Dumps Questions do not meet the match criteria are then forwarded according to the route table, You can find mycelium only in the Mooshroom Island biome;

Pass Guaranteed Associate-Cloud-Engineer - Marvelous Google Associate Cloud Engineer Exam Test King

Our website provides you with accurate Valid Associate-Cloud-Engineer Exam Pdf and Associate-Cloud-Engineer valid vce for your preparation, which ensure you pass the Associate-Cloud-Engineer real exams smoothly.

Do you offer discounts on your products, Our Exam Associate-Cloud-Engineer Preparation Material provides you everything you will need to take your Associate-Cloud-Engineer Exam, When you have something to go out, you can study with your mobile phone and handouts.

If they used our real exam dumps Associate-Cloud-Engineer they had pass exams at first shot and own the certification.
