

Associate-Google-Workspace-Administrator Examengine, Associate-Google-Workspace-Administrator Testing Engine

P.S. Kostenlose 2025 Google Associate-Google-Workspace-Administrator Prüfungsfragen sind auf Google Drive freigegeben von ZertFragen verfügbar: <https://drive.google.com/open?id=1X2EGI-6KMS7FXFU4StdWnNXSZqSmWP7t>

ZertFragen ist professionell und geschaffen für die breiten Kandidaten. Es ist nicht nur von hoher Qualität und guter Dienstleistungen, sondern auch ganz billig. Wenn Sie über ZertFragen verfügen, brauchen Sie keine Sorge um die Google Associate-Google-Workspace-Administrator Zertifizierungsprüfungen machen. ZertFragen wird Ihnen in kürzester Zeit helfen, die Google Associate-Google-Workspace-Administrator Prüfungen zu bestehen. Mit diesen Lernhilfe werden Sie näher von einem IT-Spezialisten sind.

Google Associate-Google-Workspace-Administrator Prüfungsplan:

Thema	Einzelheiten
Thema 1	- Managing User Accounts, Domains, and Directory: This section measures the skills of Identity Administrators and Directory Managers, covering user lifecycle processes like automated provisioning - de-provisioning, SAML SSO configuration, and GCDS integration. It includes designing OU hierarchies aligned with organizational structures, managing dynamic - security groups, domain verification (MX records), and resource booking permissions for rooms - equipment.
Thema 2	Managing Security Policies and Access Controls: Validating skills of Security Architects and IAM Specialists, this domain enforces password policies, 2SV methods (Authenticator, passkeys), and context-aware access rules. It covers security group management, admin role delegation (super admins), Security Center risk analysis, and third-party app controls (Marketplace allowlists, SAML integration).
Thema 3	- Managing Data Governance and Compliance: Designed for Data Governance Analysts and Compliance Officers, this section addresses Vault eDiscovery, DLP rule creation for sensitive data protection (credit cards, PII), Drive trust rules for external sharing restrictions, data location controls, and classification via Drive - Gmail labels. It evaluates strategies for Takeout management and regulatory alignment.

Associate-Google-Workspace-Administrator Testing Engine & Associate-Google-Workspace-Administrator Deutsche

Ohne Zeitaufwand und Anstrengung die Google Associate-Google-Workspace-Administrator Prüfung zu bestehen ist unmöglich,

daher bemühen wir uns darum, Ihre Belastung der Vorbereitung auf Google Associate-Google-Workspace-Administrator zu erleichtern. Standardisierte Simulierungsrüfung und die leicht zu verstehende Erläuterungen können Ihnen helfen, allmählich die Methode für Google Associate-Google-Workspace-Administrator Prüfung zu beherrschen. Um mehr Stress von Ihnen zu beseitigen versprechen wir, falls Sie die Prüfung nicht bestehen, geben wir Ihnen volle Rückerstattung der Google Associate-Google-Workspace-Administrator Prüfungsunterlagen nach der Überprüfung Ihres Zeugnisses. ZertFragen ist vertrauenswürdig!

Google Associate Google Workspace Administrator Associate-Google-Workspace-Administrator Prüfungsfragen mit Lösungen (Q100-Q105):

100. Frage

External sharing at your company is only permitted for the sales and marketing department. Engineering is not allowed to share externally. You need to configure the sharing settings to comply with this policy. What should you do?

- A. Create separate shared drives for each department with different external sharing settings.
- B. Use a data loss prevention (DLP) solution to control external sharing based on user groups.
- C. Configure Drive trust rules to restrict the engineering department from sharing externally.
- **D. Create organizational units (OUs) for each department. Configure different external sharing settings for each OU.**

Antwort: D

Begründung:

By creating separate organizational units (OUs) for each department, you can apply different external sharing settings based on the department's requirements. For example, you can configure the sales and marketing department's OU to allow external sharing, while configuring the engineering department's OU to restrict external sharing. This approach allows you to enforce departmental policies efficiently without impacting other departments.

101. Frage

The names and capacities of several conference rooms have been updated. You need to use the most efficient way to update these details.

What should you do?

- A. Edit each resource in the Google Admin console.
- B. Add the modified rooms as new resources. Tell employees not to use old rooms.
- C. Delete the existing resources and recreate the resources with the updated information.
- **D. Export the resource list to a CSV file, make the changes, and re-import the updated file.**

Antwort: D

Begründung:

Exporting the resource list to a CSV file, making the necessary updates, and then re-importing the file is the most efficient method for updating multiple conference rooms at once. This approach allows you to make bulk updates quickly without needing to edit each resource individually or delete and recreate rooms. It also ensures that the updated information is applied to all affected rooms at once.

102. Frage

You need to grant a specific set of users in your company access to YouTube, and you want to restrict their access to Merchant Center. What should you do?

- A. Contact Google Support and request that they enable YouTube access for the specific set of users and restrict their access to Merchant Center.
- B. Create YouTube and Merchant Center as custom web apps. Apply access policies at the Group or organizational unit (OU) level.
- C. Enable YouTube for all users in the company. Individually restrict access to Merchant Center for specific Groups or organizational units (OUs).
- **D. Enable access to YouTube at the Group or organizational unit (OU) level for the subset of users. Disable access to Merchant Center.**

Antwort: D

Begründung:

By enabling YouTube access at the Group or organizational unit (OU) level, you can target a specific set of users, allowing them to access YouTube. Simultaneously, you can disable access to Merchant Center for those same users, ensuring they can access YouTube but not Merchant Center. This approach uses Google Workspace's built-in capabilities to manage access based on user groups or organizational units.

103. Frage

You are investigating a potential data breach. You need to see which devices are accessing corporate data and the applications used. What should you do?

- A. Analyze the Google Workspace reporting section of the Admin console.
- **B. Analyze the audit log in the Admin console for device and application activity.**
- C. Analyze the User Accounts section in the Google Admin console.
- D. Analyze the security investigation tool to access device log data.

Antwort: B

Begründung:

The audit log in the Google Admin console provides detailed information about device and application activity, which is crucial for investigating a potential data breach. You can see which devices have accessed corporate data, as well as which applications were used, giving you a comprehensive view of any unauthorized or suspicious activities. This is the most appropriate and efficient tool for this investigation.

104. Frage

Your company has a globally distributed remote work team. You want to ensure all team members adhere to the company's data security policies and only access authorized systems based on their location and role. What should you do?

- A. Set up and mandate the use of a company-wide VPN for all remote access.
- B. Implement two-factor authentication for all remote team members.
- **C. Configure access control policies with conditional access.**
- D. Create and enforce data loss prevention (DLP) rules to control data sharing.

Antwort: C

Begründung:

To ensure that a globally distributed remote work team adheres to data security policies and only accesses authorized systems based on their location and role, you should configure access control policies with conditional access. Conditional access allows you to define rules that grant or block access to resources based on various factors, including the user's location, the device they are using, their role, and the application they are trying to access.

Here's why option D is the most comprehensive solution for the stated requirements and why the others address only parts of the problem:

D . Configure access control policies with conditional access.

Conditional access is a security framework that evaluates multiple signals before granting access to resources. By implementing conditional access policies, you can:

- Control access based on location: Restrict access to certain systems or data based on the geographic location of the user.

- Control access based on role: Ensure that only users with specific roles have access to certain applications or data.

- Enforce device compliance: Require users to access resources only from company-managed or compliant devices.

- Implement multi-factor authentication (MFA): Require additional verification steps based on the context of the access attempt.

Conditional access provides a granular and dynamic way to enforce security policies based on the specific context of each access request, aligning with the goal of allowing access only to authorized systems based on location and role while maintaining data security.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on "Context-Aware Access" (which is Google's implementation of conditional access) explains how to set up policies based on user attributes (like group membership/role), device security status, and network location. This documentation details how to create access levels and assign them to applications based on specific conditions, ensuring that access is granted only when the requirements are met.

A . Create and enforce data loss prevention (DLP) rules to control data sharing.

DLP rules are crucial for preventing sensitive data from being shared inappropriately. However, they primarily focus on controlling what users can do with data after they have gained access. DLP does not, by itself, control who can access which systems based on

their location and role. It's a complementary security layer but not the primary solution for access control based on these factors. Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on Data Loss Prevention (DLP) explains how to create rules to prevent the sharing of sensitive information. It focuses on the content of the data and user actions related to sharing, not on controlling initial access based on location and role.

B . Set up and mandate the use of a company-wide VPN for all remote access.

A VPN (Virtual Private Network) can secure the connection between remote users and the company network by encrypting traffic and potentially routing it through company-controlled servers. While it can enhance security and provide a consistent network origin, it does not inherently control access based on the user's role or their geographic location (unless the VPN infrastructure is configured to enforce such restrictions, which would be part of a broader access control strategy). Mandating a VPN is a good security practice but doesn't fully address the need for role-based and location-aware access control.

Associate Google Workspace Administrator topics guides or documents reference: Documentation on VPNs and remote access might be mentioned in the context of securing connections, but it's not the primary mechanism for implementing granular access control based on user attributes and location within Google Workspace's administrative framework.

C . Implement two-factor authentication for all remote team members.

Two-factor authentication (2FA) adds an extra layer of security by requiring users to provide two forms of identification before gaining access. This significantly reduces the risk of unauthorized access due to compromised passwords. While 2FA is a critical security measure for remote teams, it doesn't, by itself, control which systems users can access based on their location and role. It verifies the user's identity but not the context of their access attempt in terms of location or role-based authorization.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help strongly recommends enabling 2-Step Verification (Google's implementation of 2FA) for enhanced security. However, it is primarily focused on user authentication, not on contextual access control based on location and role.

Therefore, the most comprehensive solution to ensure adherence to data security policies and control access based on location and role for a globally distributed remote work team is to configure access control policies with conditional access. This framework allows for the creation of context-aware rules that take into account various factors to determine whether to grant or block access to resources.
