

Associate-Google-Workspace-Administrator Neuesten und qualitativ hochwertige Prüfungsmaterialien bietet - quizfragen und antworten

P.S. Kostenlose 2025 Google Associate-Google-Workspace-Administrator Prüfungsfragen sind auf Google Drive freigegeben von ZertSoft verfügbar: https://drive.google.com/open?id=19n88fuQmyUwImeL-oaMzir67K_MCpuuI

ZertSoft ist ein Vorläufer in der IT-Branche bei der Bereitstellung von Google Associate-Google-Workspace-Administrator IT-Zertifizierungsmaterialien, die Produkte von guter Qualität bieten. Die Prüfungsfragen und Antworten zur Google Associate-Google-Workspace-Administrator Zertifizierungsprüfung von ZertSoft führen Sie zum Erfolg. Sie werden exzellente Leistungen erzielen und Ihren Traum verwirklichen.

Google Associate-Google-Workspace-Administrator Prüfungsplan:

Thema	Einzelheiten
Thema 1	- Managing Core Workspace Services: Targeting Workspace Configuration Specialists and Collaboration Platform Engineers, this domain focuses on configuring Gmail (mail routing, DLP, SPF DKIM), Drive - Shared Drives (sharing policies, quotas), Calendar (resource delegation), Meet (security recording settings), Chat moderation, and Gemini licensing. It also covers AppSheet - Apps Script deployment for workflow automation.
Thema 2	- Managing Endpoints: This section measures the proficiency of Endpoint Security Engineers and Mobility Managers in applying mobile device policies (BYOD company-owned), Chrome browser enrollment - extension management, and troubleshooting synchronization issues across Workspace services.
Thema 3	- Troubleshooting Common Issues: Targeting Technical Support Engineers and Systems Administrators, this domain tests diagnostic skills for mail delivery failures (SPF DMARC analysis), Calendar - Drive permission conflicts, Meet performance issues, and accidental file deletion recovery. It emphasizes log interpretation, HAR file generation, and leveraging the Workspace Status Dashboard for outage identification.
Thema 4	- Managing Data Governance and Compliance: Designed for Data Governance Analysts and Compliance Officers, this section addresses Vault eDiscovery, DLP rule creation for sensitive data protection (credit cards, PII), Drive trust rules for external sharing restrictions, data location controls, and classification via Drive - Gmail labels. It evaluates strategies for Takeout management and regulatory alignment.

Associate-Google-Workspace-Administrator Echte Fragen - Associate-Google-Workspace-Administrator Prüfungsfrage

Wählen Sie die Fragenkataloge zur die Google Associate-Google-Workspace-Administrator Zertifizierungsprüfung von ZertSoft, können Sie neuesten Prüfungsfragen und Antworten zur Google Associate-Google-Workspace-Administrator Zertifizierung bekommen. Die Genauigkeiten der Fragenkataloge von ZertSoft kann Ihnen garantieren, dass Sie die Prüfung 100% bestehen werden. Hier können wir Ihnen versprechen, dass wir Ihnen alle an uns geleistete Zahlung erstatten werden, entweder die gekauften Produkte Qualitätsproblem haben, oder Sie die Google Associate-Google-Workspace-Administrator Zertifizierungsprüfung nicht einmalig bestehen.

Google Associate Google Workspace Administrator Associate-Google-Workspace-Administrator Prüfungsfragen mit Lösungen (Q75-Q80):

75. Frage

You are configuring email for your company's Google Workspace account. The company wants to prevent certain types of files from being sent or received as email attachments in the simplest and most cost-effective way. What should you do?

- A. Scan all incoming and outgoing emails for malicious attachments by using an industry standard third-party email security solution.
- B. Configure an attachment compliance rule in Gmail settings to block specific file types.
- **C. Enable the Security Sandbox in Gmail to automatically quarantine emails with suspicious attachments.**
- D. Adjust the maximum message size limit to prevent large files from being sent or received.

Antwort: C

Begründung:

Configuring an attachment compliance rule in Gmail allows you to specifically block certain types of files from being sent or received as email attachments. This approach is simple and cost-effective because it leverages Google Workspace's built-in functionality without requiring third-party solutions or advanced configurations. You can easily specify which file types to block, ensuring that your organization is protected from undesirable attachments.

76. Frage

Your organization's users are reporting that a large volume of legitimate emails are being misidentified as spam in Gmail. You want to troubleshoot this problem while following Google-recommended practices. What should you do?

- A. Disable spam filtering for all users.
- B. Adjust the organization's mail content compliance settings in the Admin console.
- C. Advise users to individually allowlist senders.
- **D. Contact Google Workspace support and report a suspected system-wide spam filter malfunction.**

Antwort: D

Begründung:

If legitimate emails are being misidentified as spam across the organization, it suggests that there may be a broader issue with the spam filtering system. Contacting Google Workspace support to investigate and resolve the problem is the recommended approach. Disabling spam filtering or adjusting individual settings may not resolve the root cause and could potentially lead to further issues.

77. Frage

A new user at your organization is unable to access Google Meet. You have verified that the user's account is active and the correct licenses are assigned. You need to resolve the access issue. What should you do?

- **A. Verify that Meet is enabled as a service for the user's account in the Admin console.**
- B. Restart the user's computer to refresh their network connection.
- C. Check the user's browser settings to ensure that Meet is not blocked.
- D. Instruct the user to clear their browser's cache and cookies.

Antwort: A

Begründung:

To resolve access issues with Google Meet, it's important to verify that Google Meet is enabled as a service for the user's account in the Admin console. Sometimes, individual services may be disabled for specific users or organizational units, even if the user has the correct license assigned. Ensuring that Google Meet is enabled for the user's account will grant them the necessary access to the

service.

78. Frage

A user in your organization reported that their internal event recipient is not receiving the Calendar event invites. You need to identify the source of this problem. What should you do?

- A. Check if Calendar service is turned off for the event creator.
- B. Check whether the Calendar event has more than 50 guests.
- **C. Check whether the event recipient has turned off their email notifications for new events in their Calendar settings.**
- D. Check whether the business hours are set up in the event recipient's Calendar settings.
- E. Check whether the event recipient has turned off their email notifications for new events in their Calendar settings.

Antwort: C

Begründung:

Google Calendar allows users to configure various notification settings, including whether they receive email notifications for new events, changes to events, reminders, etc. If the recipient has disabled email notifications for new events, they would not receive the invites in their inbox, even though the event might be correctly added to their Calendar.

Associate Google Workspace Administrator topics guides or documents reference: The official Google Calendar Help documentation for users, such as "Change notification settings," explains how users can customize their event notifications. This includes options to turn off email notifications for new events. While administrators don't directly manage individual user's notification settings, understanding these user-level controls is crucial for troubleshooting. An administrator might guide the user to check these settings.

A . Check whether the business hours are set up in the event recipient's Calendar settings.

Business hours in Google Calendar primarily affect meeting scheduling suggestions and how a user's availability is displayed to others. They do not directly prevent a user from receiving event invitations. Whether or not a recipient has configured their business hours will not stop the email notification for a new event from being sent (unless perhaps in very specific and unusual edge cases related to resource scheduling, which isn't indicated here).

Associate Google Workspace Administrator topics guides or documents reference: The Google Calendar Help documentation on "Set your working hours and location" explains the purpose of business hours, which is related to availability and scheduling, not the receipt of invitations.

B . Check if Calendar service is turned off for the event creator.

If the Calendar service is turned off for the event creator, they would not be able to create or send any Calendar events in the first place. Since the user created and sent the invite (as mentioned by the recipient not receiving it), the Calendar service must be active for the creator.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on "Turn Google Calendar on or off for users" explains how administrators can control access to the Calendar service. If the service is off for a user, they would not have Calendar functionality.

C . Check whether the Calendar event has more than 50 guests.

While there might be limitations on the number of guests that can be added to a single Calendar event, exceeding this limit typically results in an error message for the event creator during the invitation process, not a failure of the recipient to receive the invite. Even if there were such a limit affecting receipt (which is not a common documented issue for internal users within reasonable limits), it wouldn't be the first thing to check.

Associate Google Workspace Administrator topics guides or documents reference: Google Calendar Help documentation might mention limits on the number of guests, but these limits usually pertain to the ability to add guests, send updates, or view responses, not a complete failure of delivery to some recipients within the organization.

Therefore, the most logical first step in troubleshooting why an internal recipient isn't receiving Calendar event invites is to have the recipient check their own Calendar notification settings to ensure that email notifications for new events are enabled.

Explanation:

When an internal user reports not receiving Google Calendar event invites, the most likely immediate cause to investigate on the recipient's end is their notification settings within Google Calendar. Users can customize their notification preferences, and it's possible they have turned off email notifications for new events.

Here's why option D is the most relevant first step and why the other options are less likely to be the primary cause of this specific issue:

79. Frage

Your organization is about to conduct its biannual risk assessment. You need to help identify security risks by quickly reviewing all security settings for Gmail, Drive, and Calendar. What should you do?

- A. In the reporting section of the Admin console, review the Gmail, Drive, and Calendar reports.
- **B. In the Google Admin console, review the security health page.**
- C. In each individual organizational unit (OU), review the security settings.
- D. In the alert center, review all of the alerts.

Antwort: B

Begründung:

The security health page in the Google Admin console provides an overview of security settings and highlights potential risks across various services, including Gmail, Drive, and Calendar. This page offers a consolidated view of the security posture of your organization, making it the most efficient option for quickly identifying security risks in preparation for a risk assessment.
