With the help of ActualCollection's marvelous brain dumps, you make sure your success in Associate-Google-Workspace-Administrator certification exam with money back guarantee. ActualCollection serves a huge network of its clientele with the state of the art and exam-oriented short-term study content that requires as little as a two-week time to get ready the entire Associate-Google-Workspace-Administrator Certification syllabus.

Google Associate-Google-Workspace-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	• Managing Core Workspace Services: Targeting Workspace Configuration Specialists and Collaboration Platform Engineers, this domain focuses on configuring Gmail (mail routing, DLP, SPF DKIM), Drive • Shared Drives (sharing policies, quotas), Calendar (resource delegation), Meet (security recording settings), Chat moderation, and Gemini licensing. It also covers AppSheet • Apps Script deployment for workflow automation.
Topic 2	• Managing Data Governance and Compliance: Designed for Data Governance Analysts and Compliance Officers, this section addresses Vault eDiscovery, DLP rule creation for sensitive data protection (credit cards, PII), Drive trust rules for external sharing restrictions, data location controls, and classification via Drive • Gmail labels. It evaluates strategies for Takeout management and regulatory alignment.

Topic 3	- Managing Endpoints: This section measures the proficiency of Endpoint Security Engineers and Mobility Managers in applying mobile device policies (BYOD company-owned), Chrome browser enrollment - extension management, and troubleshooting synchronization issues across Workspace services.
Topic 4	Managing Security Policies and Access Controls: Validating skills of Security Architects and IAM Specialists, this domain enforces password policies, 2SV methods (Authenticator, passkeys), and context-aware access rules. It covers security group management, admin role delegation (super admins), Security Center risk analysis, and third-party app controls (Marketplace allowlists, SAML integration).

Free Associate-Google-Workspace-Administrator Vce Dumps & Sample Associate-Google-Workspace-Administrator Questions

Perhaps you have also seen the related training tools about Google certification Associate-Google-Workspace-Administrator exam on other websites, but our ActualCollection has a pivotal position in the field of IT certification exam. ActualCollection research materials can 100% guarantee you to pass the exam. With ActualCollection your career will change and you can promote yourself successfully in the IT area. When you select ActualCollection you'll really know that you are ready to pass Google Certification Associate-Google-Workspace-Administrator Exam. We not only can help you pass the exam successfully, but also will provide you with a year of free service.

Google Associate Google Workspace Administrator Sample Questions (Q46-Q51):

NEW QUESTION # 46

Your organization's employees frequently collaborate with external clients and vendors by using Google Meet. There are active instances of unsupervised meetings within your organization that do not have a host, and unsupervised meetings that continue after an event has completed. You want to end all meetings that are being used inappropriately as quickly as possible. What should you do?

- A. Identify and end all unsupervised meetings by using the security investigation tool.
- B. Turn off Google Meet in the Admin console for your organization. Turn Google Meet back on after two minutes.
- C. Enable Host Management for Google Meet, and train internal host employees how to end meetings for everyone.
- **D. End all unsupervised meetings by using the Google Meet APIs.**

Answer: D

Explanation:

Using the Google Meet APIs allows you to programmatically end all unsupervised meetings quickly. This approach is the most effective for managing unsupervised meetings in real-time, especially if there are multiple such meetings happening across the organization. It provides a centralized method to monitor and take action on these meetings, ensuring security and preventing misuse.

NEW QUESTION # 47

You are investigating a potential data breach. You need to see which devices are accessing corporate data and the applications used. What should you do?

- A. Analyze the User Accounts section in the Google Admin console.
- B. Analyze the Google Workspace reporting section of the Admin console.
- C. Analyze the security investigation tool to access device log data.
- **D. Analyze the audit log in the Admin console for device and application activity.**

Answer: D

Explanation:

The audit log in the Google Admin console provides detailed information about device and application activity, which is crucial for investigating a potential data breach. You can see which devices have accessed corporate data, as well as which applications were

used, giving you a comprehensive view of any unauthorized or suspicious activities. This is the most appropriate and efficient tool for this investigation.

NEW QUESTION # 48

Your organization allows employees to use their personal devices for work purposes. You want to ensure these devices follow the company's security policies. You need to choose a mobile management solution that provides minimal passcode enforcement and allows for an admin to remotely wipe a user's account from the device. You also want to avoid having to install agents on employees' personal devices. What should you do?

- A. Enforce a strong password policy, and enforce the password policy at the next sign-in.
- **B. Implement Google's basic management on mobile devices.**
- C. Deploy a third-party mobile device management (MDM) solution.
- D. Implement Google's advanced management on mobile devices.

Answer: B

Explanation:

Google's basic management for mobile devices allows administrators to enforce minimal security policies, such as passcode enforcement, without requiring the installation of any agents on employees' personal devices. This solution also allows for remotely wiping a user's account from the device if needed, ensuring data security while maintaining a less intrusive management approach for personal devices.

NEW QUESTION # 49

An employee is leaving your company and has numerous files stored in My Drive. Their manager wants to retain access to these files. You need to offboard the departing employee's Google Workspace account while ensuring that the manager can still access the files while following Google-recommended practices. What should you do?

- A. Download the departing employee's Drive data by using Google Takeout. Upload the data to the manager's Drive before deleting the departing employee's Google Workspace account.
- B. Instruct the departing employee to share their My Drive folder with the manager before leaving. Delete the Google Workspace account on the departing employee's last day.
- C. Use Google Vault to establish a retention policy for the organizational unit (OU) of the departing employee. Assign the Google Archived User license.
- **D. Transfer ownership of the departing employee's files to the manager during the user deletion process.**

Answer: D

Explanation:

Transferring ownership of the departing employee's files to the manager ensures that the manager retains access to all the files, including those stored in My Drive, without requiring additional steps like downloading or sharing files. This method follows Google-recommended practices and ensures that the files remain under proper management even after the employee's account is deleted. This process can be done efficiently during the offboarding process to ensure continuity of access.

NEW QUESTION # 50

The current data storage limit for the sales organizational unit (OU) at your company is set at 10GB per user. A subset of sales representatives in that OU need 100GB of storage across shared services. You need to increase the storage for only the subset of sales representatives by using the least disruptive approach and the fewest configuration steps. What should you do?

- A. Create a configuration group, and add the subset of users to that group. Set the group storage limit to 100GB.
- B. Instruct the subset of users to store their documents in a Shared Drive with a 100GB limit.
- **C. Move the subset of users to a sub-OU, and assign a 100GB storage limit to that sub-OU.**
- D. Change the storage limit of the sales OU to 100GB.

Answer: C

Explanation:

By moving the subset of sales representatives to a sub-organizational unit (OU) and assigning a 100GB storage limit to that sub-OU, you can efficiently increase the storage for those users without affecting the rest of the sales team. This approach allows you to target

the specific users that require more storage, maintaining minimal disruption and configuration steps.

NEW QUESTION # 51
