ISTQB Advanced Test Management Exam v3.0 - ISTQB Sample Questions (Q12-Q17):

NEW QUESTION # 12

Assume that the following test cases have been executed at the end of the first week of test execution: TC-001, TC-002 and TC-007. All these tests are 'passes'.

	TEST CASES									
	TC-001	TC-002	TC-003	TC-004	TC-005	TC-006	TC-007	TC-008	TC-009	TC-010
REQUIREMENTS	REQ-001	X								
	REQ-002		X							
	REQ-003			X						
	REQ-004			X			X			
	REQ-005				X		X			
	REQ-006					X	X			
	REQ-007							X		
	REQ-008							X		
	REQ-009	X								
	REQ-010								X	
	REQ-011			X						
	REQ-012									X

What is the MINIMUM number of the remaining test cases that must be successfully executed to fulfill the EX1 exit criteria?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

Section: Testing Process

NEW QUESTION # 13

You are the Test Manager of a new project that will have three formal levels of testing unit, integration and system testing. The testing strategy you decide to adopt a blend of risk-based testing and reactive testing strategies.

Which of the following answers describes the most consistent example of implementation of this test strategy during the execution of the system tests?

- **A. Your test team executes scripted tests designed and implemented before the execution of the system test phase, to cover the identified product risks. It also performs exploratory testing sessions throughout the system test phase**
- B. Your test team executes system tests under the guidance of a sample of users throughout the system test phase
- C. Your test team autonomously performs some exploratory testing sessions and, at the very end of the system testing phase, it also executes more system tests under the guidance of a sample of users
- D. Your test team executes exploratory tests following a session-based test management approach throughout the system test phase

Answer: A

NEW QUESTION # 14

You are working on a project to develop an authentication system for an e-commerce website. This system provides two features: Registration and authentication. Two different development teams develop these two features.

There is a high likelihood that the delivery of the authentication feature to the test team will be three weeks later. To complete the

registration the user must provide the following registration inputs: Name, surname, birth date, fiscal code and he/she can select a username and a password.

A registered user can be a special user or a normal user. To be identified as a special user, he/she must also provide, during the registration process, a voucher possibly received from the IT department.

Access is granted only if a user is registered and the password is correct: In all other cases access is denied. If the registered user is a special user and the password is wrong, a special warning is shown on the system console.

You are currently performing a quality risk analysis using FMEA.

Based only on the given information, which of the following is NOT a product risk that could be identified during the quality risk analysis?

- A. The authentication system grants access to a normal user with a wrong password
- B. The authentication system denies access for a special user with a wrong password, but doesn't display a special warning on the system console
- C. The authentication system grants access to a special user with a wrong password
- **D. The late delivery of the authentication feature to the test team causes delays in the start of test execution and this could result in a shorter test period**

Answer: D

NEW QUESTION # 15

Assume you are managing a test automation project for a mission-critical system.

Because vendor provided tools and open source solutions don't meet the needs of this project, you ask your test team to develop a custom automation framework.

Which of the following management issues associated to the development of this custom automation framework is least likely to manage?

- **A. The changes to the custom automation framework should be communicated to all external users of this tool under the GNU license**
- B. The custom automation framework will require an adequate documentation
- C. The custom automation framework will need proper maintenance
- D. Proper testing for the custom automation framework must be performed

Answer: A

NEW QUESTION # 16

Consider the following statements describing the importance of improving the test process:

I. Test process improvement is important because being focused only on the test process it can provide recommendations to improve the test process itself, but it can't indicate or suggest improvement to areas of the development process II. Test process improvement is important because it is much more effective than software process improvement to improve the quality of a software system III. Test process improvement is important because several process improvement models (STEP, TPI Next, TMMi) have been developed over the years IV. Test process improvement is important because every organization, regardless of the context, should always achieve the maximum level of maturity of testing described in the test improvement models such as TMMi Which of the following answers is correct?

- A. I. and IV. are true; II. and III. are false
- B. I., II. and III. are false; IV. is true
- C. I., II. and III are true; IV. is false
- **D. I., II., III. and IV are false**

Answer: D
