ISTQB ATM Preparation & Trustworthy ATM Exam Torrent

A lot of our candidates used up all examination time and leave a lot of unanswered questions of the ATM exam questions. It is a bad habit. In your real exam, you must answer all questions in limited time. So you need our timer to help you on ATM Practice Guide. Our timer is placed on the upper right of the page. The countdown time will run until it is time to submit your exercises of the ATM study materials. Also, it will remind you when the time is soon running out.

ISTQB ATM Exam is based on the ISTQB Syllabus for Advanced Level Test Manager, version 2012. This syllabus outlines the topics that will be covered in the exam, including test management, test strategy, and risk management. Candidates need to be familiar with these topics before taking the exam.

Automation Testing Methods for Software Testing

Creating automated tests can be done in several ways. It is important for this list to include the software testing industry. Drop the testing process in this industry. Stick to the known software testing industry. Avoid popularized security testing procedures. False positive detections are a problem in the software testing industry. Satisfactory is a term that refers to the software that is being tested.

Address the problem as soon as possible in this industry. Issuer is a term that refers to a country's central bank. Closed source software testing statistics are available for this company. An electronic device is a device that is used in software testing. Physically functioning and working software testing is a huge problem.

ISTQB Advanced Test Management Exam v3.0 - ISTQB Sample Questions (Q41-Q46):

NEW QUESTION # 41

Assume you are managing the system testing execution phase of a project.

The system test execution period for that project is scheduled for eighteen weeks and the release date is scheduled at the end of system testing.

During the sixth week of system test execution, at the staff meeting, the project manager informs you that the project deadlines are changed and the release date that is only three weeks ahead.

This new release will not allow the completion of the system tests. Suppose also that you have followed a risk- driven test approach for this project.

Which of the following statements represents the worst way to lead your test team in the next three weeks?

- A. Favor and encourage a proactive attitude where people ask for new tasks as soon as they finish their current tasks
- **B. Neglect your management activities and work side-by-side with your test team executing tests**
- C. Convince all the people of your test team that each of them is an important and needed member, and that their contribution is fundamental to the success of the team
- D. Considering the executed tests, you should reduce the test coverage back on the risk analysis and adjust downward the priority of the associated risk items

Answer: B

Explanation:

Section: People Skills - Team Composition

Explanation:

NEW QUESTION # 42

Which of the following statements best describes an appropriate approach for managing exploratory testing?

Number of correct responses: 1

K2 1 credit

- A. Define very detailed mission statements, which allow testing work to be broken into sessions of up to 10 minutes duration in which testing is guided by these mission statements
- **B. Break the testing work in 30 to 120 minutes sessions and use properly defined mission statements consisting of two or three sentences to guide testing during these sessions**
- C. Exploratory testing should not be managed because such testing is inherently unmanageable and not measurable
- D. Define very generic charters to drive exploratory testing sessions of 2 days where testers are completely free to decide what to test

Answer: B

NEW QUESTION # 43

A chart showing the trend in the lag time from defect reporting to resolution during system testing is also available. The chart shows that the daily closure period is consistently and significantly above the rolling closure period for a long period of the system testing phase.

Almost all defects found during system testing have been related to the system as a whole, not related to single units or integrations issues. Almost all quality risks have been addressed during the unit and integration testing phase and no residual quality risks were present in the integrated system. This has been confirmed by exploratory testing sessions performed during system testing, targeted at finding defects in these quality risk areas.

Based on the given information only, which one of the following areas would you expect to

be considered more in the retrospective meeting in order to be improved?

K3 3 credits

- A. The quality risk analysis process
- B. The system design and architecture design reviews
- **C. The defect management process**
- D. The requirements review

Answer: C

NEW QUESTION # 44

You can count on well-written requirements, but you can't count on an adequate contribution of the stakeholders to the quality risk analysis. You have to mitigate the insufficient contribution of the stakeholders because the risk-based testing approach shall minimize the product risks. Your test team has one expert tester in security testing.

Which of the following test activities would you expect to be the less important in this context?

- A. Apply systematic and exploratory testing for integration and system test
- B. Perform exploratory testing sessions with adequate charters covering security aspects
- **C. Automate all functional and non-functional system tests**
- D. Extract from the defect tracking system of the previous project all the security defects and failures, and classify them to support design and execution of specific tests

Answer: C

NEW QUESTION # 45

You are the Test Manager of a new project aimed at developing a software system that must be certified at level B of the DO-178B standard. The project will follow a V-Model software development life cycle and it will have four formal levels of testing: component, integration, system and acceptance testing.

You must produce the test plan documentation for this project by providing an adequate coordination across the four levels of testing in order to assure audit ability.

Which of the following answers would you expect to best describe how to organize the test plan?

K3 2 credits

- A. Produce four separate detailed level test plans, one for each level, without a master test plan
- B. Produce a single master test plan that covers in detail all four levels, describing the particular activities for all test levels
- C. Produce a master test plan that covers three levels (component, integration, system test) and a separate acceptance test plan
- **D. Produce a master test plan describing the relationship between the four levels, and four separate detailed level test plans, one for each level**

Answer: D

NEW QUESTION # 46
