Valid ATM Exam Syllabus: Advanced Test Management
Exam v3.0 - ISTQB**

22. A firm is preparing its cash budget for the next year. The estimated creditors at the beginning of next year are Rs. 600,000. The purchases for next year are estimated at Rs. 14.4 million, occurring evenly throughout the year. 70% of purchases will be on credit and the remainder will be for cash. The company pays for credit purchases in the month following the purchase.

The estimated cash payment to suppliers during next year is:

- A. Rs. 11.40 million
- B. Rs. 13.20 million
- C. Rs. 13.80 million
- D. Rs. 14.16 million

The actual ISTQB ATM exam questions are in PDF format for the one who wants to study offline. The actual ISTQB ATM exam questions are in simple PDF form. The PDF format is suitable both for smartphones as well as tablets. You can print documents and

study anywhere. The plus point is that the PDF version is updated regularly to improve its ATM Exam Questions and reflect changes in the syllabus of the exam.

From QA analyst to senior test manager, the ISTQB ATM (ISTQB Certified Tester Advanced Level - Test Manager [Syllabus 2012]) Certification Exam is a valuable barometer for career advancement in the field of software testing. Advanced Test Management Exam v3.0 - ISTQB certification exam covers various aspects of test management and focuses on elevating a test manager's proficiency in handling the software delivery process. ATM exam requires candidates to demonstrate a high level of experience and knowledge about software testing methodologies, leadership qualities, and risk analysis.

Automation Testing Methods for Software Testing

Creating automated tests can be done in several ways. It is important for this list to include the software testing industry. Drop the testing process in this industry. Stick to the known software testing industry. Avoid popularized security testing procedures. False positive detections are a problem in the software testing industry. Satisfactory is a term that refers to the software that is being tested. Address the problem as soon as possible in this industry. Issuer is a term that refers to a country's central bank. Closed source software testing statistics are available for this company. An electronic device is a device that is used in software testing. Physically functioning and working software testing is a huge problem.

If you have any doubts about the ATM pdf dump, please feel free to contact us, our team I live 24/7 to assist you and we will try our best to satisfy you. Now, you can download our ATM free demo for try. If you think our ATM study torrent is valid and worthy of purchase, please do your right decision. PrepAwayExam will give you the best useful and latest ATM Training Material and help you 100% pass. Besides, your information is 100% secure and protected, we will never share it to the third part without your permission.

ISTQB Advanced Test Management Exam v3.0 - ISTQB Sample Questions (Q12-Q17):

NEW QUESTION # 12

Assume you are managing the system testing phase of a project.

The system test execution period is scheduled to twenty weeks.

All tests are manual tests. You are following a risk-driven test approach.

During the last staff meeting the project manager tells you new deadlines that will not allow completion of all the system tests.

Which of the following would you expect to be the best way to respond to this situation?

- A. Prioritize executing the tests for the highest product risks and track these risks
- B. Remove testers from your test team, so that they can be assigned to other projects
- C. No action is needed, test as much as possible in the remaining time period
- D. Automate all remaining tests

Answer: A

Explanation:

Section: Test Management

Explanation/Reference:

NEW QUESTION # 13

You have assembled the following cost of quality numbers 200 defects were found prior to release and 100 were found after. Given this information what is the total cost of quality for this project?

Average Cost	Amount	# of Defects	Total Cost
Defect prevention	\$10,000	N/A	\$10,000
Appraisal	\$250	200	\$50,000
Internal failure	\$200	200	\$40,000
External failure	\$2,000	100	\$200,000

- A. \$200,000
- B. \$10 000
- C. \$300,000
- D. \$100,000

Answer: C

Explanation:

Step by Step Comprehensive Detailed Explanation:

* Definition of Cost of Quality (CoQ): CoQ is composed of four components:

* Prevention Costs: Costs related to activities to prevent defects (e.g., training, quality planning).

* Appraisal Costs: Costs associated with evaluating products to ensure defect-free delivery (e.g., testing).

* Internal Failure Costs: Costs due to defects found before delivery to the customer (e.g., rework).

* External Failure Costs: Costs from defects discovered after delivery (e.g., warranty claims, reputation damage).

* Calculation Process:

* Defect Prevention Cost: Given as \$10,000 (fixed).

* Appraisal Cost: \$250 per defect for 200 defects = $250 \times 200 = 50,000$

* Internal Failure Cost: \$200 per defect for 200 defects = $200 \times 200 = 40,000$

* External Failure Cost: \$2,000 per defect for 100 defects = $2,000 \times 100 = 200,000$

* Total CoQ: Adding all costs together:

Total CoQ = $10,000 + 50,000 + 40,000 + 200,000 = 300,000$

* Correct Answer and Justification: The total cost is \$300,000, making Option A the correct answer.

References and Documentation from Advanced Test Management:

* ISTQB Advanced Test Management Syllabus v3.0, Section 2.2.2: This section emphasizes understanding and calculating the cost of quality by segregating it into the four components as seen above.

* ATM Sample Exam Questions 2024 (Example Calculations): Highlights similar numerical examples to calculate CoQ.

* ISTQB Exam Structure Rules v1.9: Ensures alignment with K2-level understanding for cost analysis scenarios in test management.

NEW QUESTION # 14

You can count on well-written requirements, but you can't count on an adequate contribution of the stakeholders to the quality risk analysis. You have to mitigate the insufficient contribution of the stakeholders because the risk-based testing approach shall minimize the product risks. Your test team has one expert tester in security testing. Which of the following test activities would you expect to be the less important in this context?

K4 3 credits

- A. Automate all functional and non-functional system tests
- B. Apply systematic and exploratory testing for integration and system test
- C. Perform exploratory testing sessions with adequate charters covering security aspects
- D. Extract from the defect tracking system of the previous project all the security defects and failures, and classify them to support design and execution of specific tests

Answer: A

NEW QUESTION # 15

In what environment are you most likely to see multiple defect management systems used in one project?

- A. Agile
- **B. Hybrid**
- C. Sequential
- D. Multi-tenant

Answer: B

Explanation:

* Context Analysis:

* A hybrid environment combines methodologies (e.g., Agile and traditional), often leading to multiple tools to manage different workflows, methodologies, or team needs.

* Evaluation of Options:

* A. Sequential:

* Incorrect. Sequential approaches usually involve a single defect management system due to their linear nature.

* B. Agile:

* Incorrect. Agile projects often emphasize a single integrated tool for simplicity and collaboration.

* C. Hybrid:

* Correct. Multiple tools are typical in hybrid models to accommodate diverse team processes.

* D. Multi-tenant:

* Incorrect. Multi-tenancy relates to shared infrastructure, not the use of defect management systems.

* Syllabus Alignment:

* ISTQB mentions hybrid approaches leading to diverse tool requirements for managing defects across different methodologies (TM-1.2.4).

References:

* ISTQB Advanced Level Test Management Syllabus (TM-1.2.4)

NEW QUESTION # 16

Which of the following defect statistics will provide input to be used for improvement in the defect reporting process?

- A. Number of defect reports re-opened
- B. Number of defects found in a phase later than they were introduced
- **C. Number of defect reports rejected by the developers**
- D. Number of defects in a particular area of the code

Answer: C

Explanation:

* Purpose of the Question:

* Identifying metrics to improve the defect reporting process by reducing ambiguities or improving accuracy.

* Evaluation of Options:

* A. Number of defect reports re-opened:

* Incorrect. This reflects issues with defect resolution rather than reporting.

* B. Number of defects in a particular area of the code:

* Incorrect. This metric pertains to defect clustering, not the reporting process.

* C. Number of defect reports rejected by the developers:

* Correct. Rejected reports often indicate poor reporting quality (e.g., insufficient details, incorrect categorization), directly highlighting areas for improvement.

* D. Number of defects found in a phase later than they were introduced:

* Incorrect. This is a measure of defect detection efficiency, not reporting quality.

* Syllabus Alignment:

* The syllabus stresses the importance of using defect metrics to refine processes, including reporting accuracy (TM-2.3.5).
