Our ISTQB ATM demo products hold the demonstration for our actual products, demos are offered at no cost only for raising your confidence level. Procure the quality of our product in advance, unsighted featured becomes reveal with our ATM Demo products. Free Private Cloud Monitoring and Operations with demos respond to all kind of worries that customers have in their mind while going for actual purchase.

ISTQB Advanced Test Management Exam v3.0 - ISTQB Sample Questions (Q16-Q21):

NEW QUESTION # 16

You can count on well-written requirements, but you can't count on an adequate contribution of the stakeholders to the quality risk analysis. You have to mitigate the insufficient contribution of the stakeholders because the risk-based testing approach shall minimize the product risks. Your test team has one expert tester in security testing.

Which of the following test activities would you expect to be the less important in this context?

- ☐ A. Perform exploratory testing sessions with adequate charters covering security aspects
- ☐ B. Extract from the defect tracking system of the previous project all the security defects and failures, and classify them to support design and execution of specific tests
- ☒ C. Automate all functional and non-functional system tests
- ☐ D. Apply systematic and exploratory testing for integration and system test

Answer: C

Explanation:
Section: Testing Process

NEW QUESTION # 17

Which of the following defect statistics will provide input to be used for improvement in the defect reporting process?

- **A. Number of defect reports rejected by the developers**
- B. Number of defects in a particular area of the code
- C. Number of defects found in a phase later than they were introduced
- D. Number of defect reports re-opened

Answer: A

Explanation:

* Purpose of the Question:

* Identifying metrics to improve the defect reporting process by reducing ambiguities or improving accuracy.

* Evaluation of Options:

* A. Number of defect reports re-opened:

* Incorrect. This reflects issues with defect resolution rather than reporting.

* B. Number of defects in a particular area of the code:

* Incorrect. This metric pertains to defect clustering, not the reporting process.

* C. Number of defect reports rejected by the developers:

* Correct. Rejected reports often indicate poor reporting quality (e.g., insufficient details, incorrect categorization), directly highlighting areas for improvement.

* D. Number of defects found in a phase later than they were introduced:

* Incorrect. This is a measure of defect detection efficiency, not reporting quality.

* Syllabus Alignment:

* The syllabus stresses the importance of using defect metrics to refine processes, including reporting accuracy (TM-2.3.5).

NEW QUESTION # 18

Consider the following test strategies:

I. Consultative test strategy

II. Reactive test strategy

III. Analytical test strategy

IV. Process-compliant test strategy

Consider also the following examples of test activities:

1. Prioritize the test cases, based on the results of a FMEA analysis, to ensure early coverage of the most important areas and discovery of the most important defects during test execution

2. Execute usability testing driven by the guidance of a sample of users (external to the test team)

3. Perform exploratory testing sessions throughout the system test phase

4. On an Agile project, execute tests that cover the test conditions identified for each user story of a feature planned for an iteration

Which of the following correctly matches each test strategy with an appropriate example?

K2 1 credit

- A. I-3; II-2; III-1; IV-4
- **B. I-2; II-3; III-1; IV-4**
- C. I-1; II-2; III-3; IV-4
- D. I-2; II-3; III-4; IV-1

Answer: B

NEW QUESTION # 19

You are the Test Manager for a project to develop a web customer portal of a Pay-TV company that allows customers (with a smartcard and a set-top box) to purchase digital contents.

In the "select" page the system displays a dialogue where the customer can select the items (digital contents) he/she is interested in. In this page he/she can add one or more items to a shopping cart. An item consists of a product and a duration.

There are three types of products: Movie, sport and premium (movie and sport).

There are four possible durations: 1 months, 2 months, winter (from the beginning of January to end of March) and summer (from the beginning of July to end of September).

All the combinations of products and durations are allowed to define an item. Thus there are twelve possible items. A maximum of six different items can be added to the shopping cart at a time.

When the customer decides to check out he/she goes to the "purchase" page where he/she can pay the total amount of the shopping cart in three different ways:

- using a credit voucher
- using a credit already charged on the smartcard
- using a credit card (accepted credit cards are: Visa, MasterCard and Great Wall Card) The customer can logout from both the "select" and "purchase" pages. In this case no purchase is made.

You decide to apply a blended risk-based and reactive testing strategy and the following is a subset of the exit criteria for system testing:

EXCR1- Each "critical" quality risk item must be covered by at least one test condition EXCR2- Each "critical" requirement must be covered by at least one test condition You are following a risk-based testing strategy. The test execution time is very limited. Assume that all the product risk items require more or less the same level of test effort.

Product Risk Item	Likelihood	Impact
The system does not accept transactions coming from the IVR channel	1	5
The system does not correctly charge a Smart Card with the required contents	2	5
The system does not activate a pre-activated Smart Card	3	5
The system does not pre-activate a Smart Card	5	3

Which of the following answers describes the best execution schedule in this scenario?

- A. 1- Test the acceptance of transactions coming from the IVR channel2- Test the correct charge of the Smart Card with the required contents3- Test the correct pre-activation of the Smart Card4- Test the correct activation of the Smart Card
- B. 1- Test the correct pre-activation of the Smart Card2- Test the correct activation of the Smart Card3- Test the correct charge of the Smart Card with the required contents4- Test the acceptance of transactions coming from the IVR channel
- C. 1- Test the correct pre-activation of the Smart Card2- Test the correct charge of the Smart Card with the required contents3- Test the correct activation of the Smart Card4- Test the acceptance of transactions coming from the IVR channel
- D. 1- Test the correct activation of the Smart Card2- Test the correct pre-activation of the Smart Card3- Test the correct charge of the Smart Card with the required contents4- Test the acceptance of transactions coming from the IVR channel

Answer: B

NEW QUESTION # 20

Assume that you are the Test Manager for a small insurance application development project.

You have decided to adopt a risk-based testing strategy: 5 product risks (R1, R2, R3, R4, R5) have been identified and their levels of risk have been assessed. 10 test cases (T1, ..., T10) have been designed to cover all the product risks.

The following table shows the risk level and the test cases associated to the identified product risks (higher risk level means higher risk):

Product risk	Risk level	Test Cases
R1	25	T1, T2
R2	12	T3, T4
R3	10	T5, T6
R4	8	T7, T8
R5	2	T9, T10

You are not confident with the assessment of the risk level and you suspect that it will be possible to find high- priority bugs in low-risk areas.

Furthermore the period for test execution is very short. Your goal is to test all the product risks in a risk-based way, while assuring

that each product risk gets at least some amount of testing.

Which of the following answers describes the best test execution schedule in this scenario?

- A. T10, T8, T6, T4, T2, T9, T7, T5, T3, T1
- B. T1, T2, T3, T4, T5, T6, T7, T8, T9, T10
- C. T10, T9, T8, T7, T6, T5, T4, T3, T2, T1
- **D. T1, T3, T5, T7, T9, T2, T4, T6, T8, T10**

Answer: D
