- B. Create a basic prompt in SAP AI Launchpad
 - *Scale the solution using generative-ai-hub-sdk
 - *Create a baseline evaluation method for the simple prompt
 - *Enhance the prompts
 - *Evaluate various models for the problem using generative-ai-hub-sdk
- C. Create a basic prompt in SAP AI Launchpad
 - *Enhance the prompts
 - *Create a baseline evaluation method for the simple prompt
 - *Evaluate various models for the problem using generative-ai-hub-sdk
 - *Scale the solution using generative-ai-hub-sdk

Answer: C

Explanation:

SAP recommends the following sequence of steps to effectively solve a business problem using the Generative AI Hub:

1. Create a Basic Prompt in SAP AI Launchpad:

* Initiation: Begin by formulating a simple prompt within SAP AI Launchpad to address the business problem. This serves as the foundation for subsequent refinements.

2. Enhance the Prompts:

* Refinement: Iteratively improve the initial prompt to better capture the nuances of the business problem, ensuring clarity and relevance.

3. Create a Baseline Evaluation Method for the Simple Prompt:

* Establish Metrics: Develop an evaluation framework to assess the performance of the prompt, setting a baseline for comparison as enhancements are made.

4. Evaluate Various Models for the Problem Using generative-ai-hub-sdk:

* Model Assessment: Utilize the generative-ai-hub-sdk to test different large language models (LLMs) against the refined prompt, identifying the model that delivers optimal results.

5. Scale the Solution Using generative-ai-hub-sdk:

* Deployment: Once the optimal model and prompt are determined, employ the generative-ai-hub-sdk to scale the solution, integrating it into the business workflow for widespread application.

Conclusion:

Following this structured approach ensures a methodical development and deployment of AI-driven solutions, enhancing their effectiveness in addressing specific business challenges.

NEW QUESTION # 58

What are some examples of generative AI technologies? Note: There are 2 correct answers to this question.

- A. Foundation models
- B. Robotic process automation
- C. Rule-based algorithms
- D. AI models that generate new content based on training data

Answer: A,D

Explanation:

Generative AI encompasses technologies that create new content by learning from existing data.

1. AI Models That Generate New Content Based on Training Data:

* Definition: These models analyze large datasets to produce original outputs, such as text, images, or music, that resemble the patterns found in the training data.

* Examples: Models like GPT-4 generate human-like text, while DALL E creates images from textual descriptions.

2. Foundation Models:

* Definition: Foundation models are large-scale AI models trained on extensive data across various domains. They serve as a base

for fine-tuning on specific tasks, enabling versatility in applications.

* Examples: Models such as BERT and GPT-3 are foundation models that can be adapted for tasks like translation, summarization, or content generation.

NEW QUESTION # 59

NEW QUESTION # 60

What is a Large Language Model (LLM)?

- A. A database system optimized for storing large volumes of textual data.
- B. An AI model that specializes in processing, understanding, and generating human language.
- C. A rule-based expert system to analyze and generate grammatically correct sentences.
- D. A gradient boosted decision tree algorithm for predicting text.

Answer: B

Explanation:

A Large Language Model (LLM) is an advanced AI model designed to handle various natural language processing tasks.

1. Definition and Purpose:

* Processing: LLMs analyze human language to understand syntax, semantics, and context.

* Understanding: They interpret the meaning behind text, enabling comprehension of nuanced language elements.

* Generating: LLMs can produce coherent and contextually appropriate text, facilitating tasks like content creation and translation.

2. Characteristics of LLMs:

* Scale: These models are trained on vast datasets, encompassing billions of words, which enhances their language capabilities.

* Architecture: LLMs typically utilize complex neural network architectures, such as transformers, to manage and process language data effectively.

3. Applications:

* Content Generation: Creating articles, summaries, and reports.

* Language Translation: Converting text from one language to another with high accuracy.

* Conversational Agents: Powering chatbots and virtual assistants to interact with users naturally.
