Professional-Cloud-Database-Engineer New APP Simulations & Professional-Cloud-Database-Engineer Passleader Review

One of the biggest highlights of the Google Cloud Certified - Professional Cloud Database Engineer prep torrent is the availability of three versions: PDF, app/online, and software/pc, each with its own advantages: The PDF version of Professional-Cloud-Database-Engineer Exam Torrent has a free demo available for download. You can print exam materials out and read it just like you read a paper. The online version of Professional-Cloud-Database-Engineer test guide is based on web browser usage design and can be used by any browser device. At the same time, the first time it is opened on the Internet, it can be used offline next time. You can practice anytime, anywhere. The Google Cloud Certified - Professional Cloud Database Engineer software supports the MS operating system and can simulate the real test environment. The contents of the three versions are the same. Each of them neither limits the number of devices used or the number of users at the same time. You can choose according to your needs.

Google Professional-Cloud-Database-Engineer Certification Exam is a highly recognized certification in the IT industry. Google Cloud Certified - Professional Cloud Database Engineer certification exam provides professionals with the skills and knowledge to design, develop, and manage highly scalable, secure, and available databases on the Google Cloud Platform. Passing this certification exam demonstrates a high level of expertise in cloud database engineering, which can help professionals advance their careers and improve their job opportunities.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q116-Q121):

NEW QUESTION # 116

You are designing a payments processing application on Google Cloud. The application must continue to serve requests and avoid any user disruption if a regional failure occurs. You need to use AES-256 to encrypt data in the database, and you want to control where you store the encryption key. What should you do?

- A. Use Bigtable with default encryption.
- B. Use Cloud Spanner with a customer-managed encryption key (CMEK).
- C. Use Cloud Spanner with default encryption.
- **D. Use Cloud SQL with a customer-managed encryption key (CMEK).**

Answer: D

NEW QUESTION # 117

You are building an Android game that needs to store data on a Google Cloud serverless database. The database will log user activity, store user preferences, and receive in-game updates. The target audience resides in developing countries that have intermittent internet connectivity. You need to ensure that the game can synchronize game data to the backend database whenever an internet network is available. What should you do?

- A. Use Firestore.
- B. Use an in-app embedded database.
- **C. Use Cloud SQL with an external (public) IP address.**
- D. Use Cloud Spanner.

Answer: C

NEW QUESTION # 118

Your company is shutting down their data center and migrating several MySQL and PostgreSQL databases to Google Cloud. Your database operations team is severely constrained by ongoing production releases and the lack of capacity for additional on-premises backups. You want to ensure that the scheduled migrations happen with minimal downtime and that the Google Cloud databases stay in sync with the on-premises data changes until the applications can cut over. What should you do? (Choose two.)

- **A. Use replication from an external server to migrate the databases to Cloud SQL.**
- B. Use a cross-region read replica to migrate the databases to Cloud SQL.
- C. Use an external read replica to migrate the databases to Cloud SQL.
- D. Use a read replica to migrate the databases to Cloud SQL.

- E. Use Database Migration Service to migrate the databases to Cloud SQL.

Answer: A,E

NEW QUESTION # 119

You have a Cloud SQL instance (DB-1) with two cross-region read replicas (DB-2 and DB-3). During a business continuity test, the primary instance (DB-1) was taken offline and a replica (DB-2) was promoted. The test has concluded and you want to return to the pre-test configuration. What should you do?

- A. Create DB-4 as a read replica in the same region as DB-1, and promote DB-4 to primary.
- B. Delete DB-1, and re-create DB-1 as a read replica in the same region as DB-1.
- C. Delete DB-2 so that DB-1 automatically reverts to the primary instance.
- D. Bring DB-1 back online.

Answer: A

Explanation:

If you need to have the primary instance in the zone that had the outage, you can do a failback. A failback performs the same steps as the failover, only in the opposite direction, to reroute traffic back to the original instance. To perform a failback, use the procedure in Initiating failover. <https://cloud.google.com/sql/docs/mysql/high-availability#failback>

NEW QUESTION # 120

You are designing a database strategy for a new web application. You plan to start with a small pilot in one country and eventually expand to millions of users in a global audience. You need to ensure that the application can run 24/7 with minimal downtime for maintenance. What should you do?

- A. Use Cloud Spanner in a multi-region configuration.
- B. Use highly available Cloud SQL with multiple zones.
- C. Use Cloud SQL with cross-region replicas.
- D. Use Cloud Spanner in a regional configuration.

Answer: D

Explanation:
