SPLK-1002 Test King - SPLK-1002 Exam Test

TrainingDump are stable and reliable exam questions provider for person who need them for their exam. We have been staying and growing in the market for a long time, and we will be here all the time, because the excellent quality and high pass rate of our SPLK-1002 Exam Questions. As for the safe environment and effective product, there are thousands of candidates are willing to choose our SPLK-1002 study question, why don't you have a try for our study question, never let you down!

Splunk Core Certified Power User Exam Sample Questions (Q109-Q114):

NEW QUESTION # 109
Which of the following searches would return a report of sales by product-name?

- A. stats sum(price) as sales over product_name
- B. timechart list(sales), values(product_name)
- C. chart sum(price) as sales by product_name
- D. chart sales by product_name

Answer: A

NEW QUESTION # 110
Which of the following is one of the pre-configured data models included in the Splunk Common Information Model (CIM) add-on?

- A. Authentication
- B. Access
- C. Authorization
- D. Accounting

Answer: A

NEW QUESTION # 111
When using the transaction command, what does the argument maxspan do?

- A. Sets the maximum length that any single event can reach to be included in the transaction.
- B. Sets the maximum length of all events within a transaction.
- C. Sets the maximum total time between events in a transaction.
- D. Sets the maximum total time between the earliest and latest events in a transaction.

Answer: D

SPLK-1002 Test Discount | Free SPLK-1002 Exam

As what have been demonstrated in the records concerning the pass rate of our SPLK-1002 free demo, our pass rate has kept the historical record of 98% to 99% from the very beginning of their foundation. Although at this moment, the pass rate of our SPLK-1002 test torrent can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our SPLK-1002 Preparation materials win a place in the field of SPLK-1002 exam question making forever.

Splunk SPLK-1002 exam is a computer-based exam that consists of 65 multiple-choice questions. Candidates have 90 minutes to complete the exam, and they must achieve a passing score of 70% or higher to earn the certification. SPLK-1002 Exam covers a range of topics, including search fundamentals, search commands, transforming commands, data models, pivot, and dashboards.

Splunk Core Certified Power User Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25
Which of the following statements is true, especially in large environments?

- A. Use the transaction command when you want to see the results of a calculation.
- B. Use the scats command when you next to group events by two or more fields.
- C. The transaction command is faster and more efficient than the stats command.
- D. The stats command is faster and more efficient than the transaction command

Answer: D

Explanation:
Reference:https://answers.splunk.com/answers/103/transaction-vs-stats-commands.html
The stats command is faster and more efficient than the transaction command, especially in large environments. The stats command is used to calculate summary statistics on the events, such as count, sum, average, etc. The stats command can group events by one or more fields or by time buckets. The stats command does not create new events from groups of events, but rather creates new fields with statistical values. The transaction command is used to group events into transactions based on some common characteristics, such as fields, time, or both. The transaction command creates new events from groups of events that share one or more fields. The transaction command also creates some additional fields for each transaction, such as duration, eventcount, startime, etc. The transaction command is slower and more resource-intensive than the stats command because it has to process more data and create more events and fields.

NEW QUESTION # 26
To identify all of the contributing events within a transaction that contain at least one REJECTevent, which syntax is correct?

- A. index=main | transaction sessionid | where transaction="REJECT*"
- B. index=main | transaction sessionid | search REJECT
- C. index=main | transaction sessionid | where transaction=reject
- D. index=main REJECT | transaction sessionid

Answer: B

NEW QUESTION # 27
A macro has another macro nested within it, and this inner macro requires an argument. How can the user pass this argument into the SPL?

- A. There is no way to pass an argument to the inner macro.
- B. An argument can be passed to the inner macro by nesting parentheses.
- C. An argument can be passed to the outer macro by nesting parentheses.
- D. An argument can be passed through the outer macro.

Answer: B

Explanation:
Explanation
The correct answer is D. An argument can be passed to the inner macro by nesting parentheses.
A search macro is a way to reuse a piece of SPL code in different searches. A search macro can take arguments, which are variables that can be replaced by different values when the macro is called. A search macro can also contain another search macro within it, which is called a nested macro. A nested macro can also take arguments, which can be passed from the outer macro or directly from the search string.
To pass an argument to the inner macro, you need to use parentheses to enclose the argument value and separate it from the outer macro argument. For example, if you have a search macro named outer_macro (1) that contains another search macro named inner_macro (2), and both macros take one argument each, you can pass an argument to the inner macro by using the following syntax:
outer_macro (argument1, inner_macro (argument2))
This will replace the argument1 and argument2 with the values you provide in the search string. For example, if you want to pass "foo" as the argument1 and "bar" as the argument2, you can write:
outer_macro ("foo", inner_macro ("bar"))
This will expand the macros with the corresponding arguments and run the SPL code contained in them.

Use search macros in searches

NEW QUESTION # 28
When you run a search, fast mode extracts all fields very quickly.

- A. False
- B. True

Answer: A

NEW QUESTION # 29
Which of the following definitions describes a macro named "samplemacro" that accepts two arguments?

- A. u amp -CJEUCXG (2)
- B. samplemacro(1,2)
- C. Examplemacro [1,2]
- D. samplemacro[2]

Answer: B

Explanation:
In Splunk, a macro can accept arguments, and the correct syntax for a macro that takes two arguments is macro_name(argument1, argument2). In this case, the macro is called samplemacro, and it accepts two arguments, so the correct format would be samplemacro(1,2). This syntax allows for passing dynamic values into the macro, which can then be used to modify the search dynamically based on the arguments provided.
