Fortinet FCP_FMG_AD-7.4 certification is a reference of many well-known IT companies to hire IT employee. So this certification exam is very popular now. Exam-Killer is also recognized and relied by many people. Exam-Killer can help a lot of people achieve their dream. If you choose Exam-Killer, but you do not successfully pass the examination, Exam-Killer will give you a full refund.

Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q58-Q63):

NEW QUESTION # 58

Refer to the exhibit.

An administrator is about to add the FortiGate device to FortiManager using the discovery process. FortiManager is operating behind a NAT device, and the administrator configured the FortiManager NATed IP address under the FortiManager system administration settings.

What is the expected result?

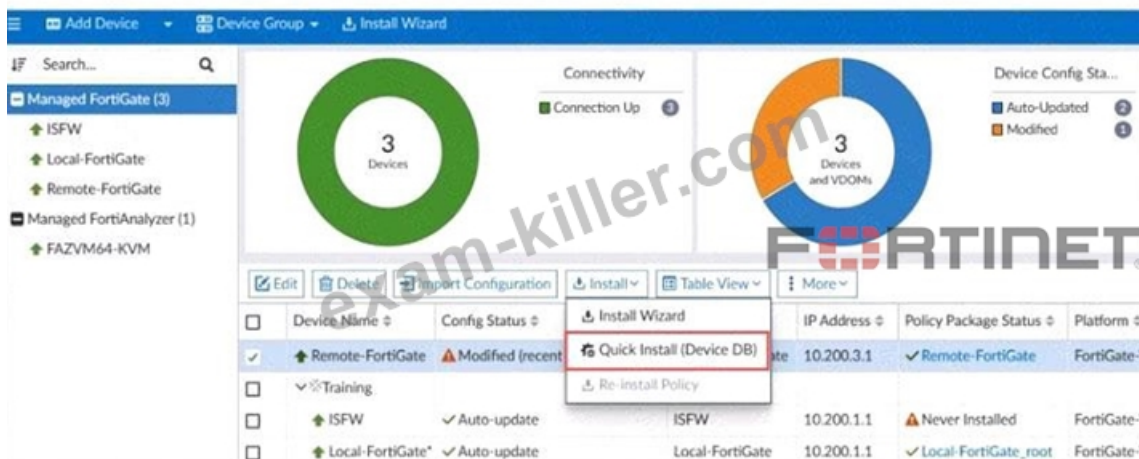

- A. During discovery, FortiManager sets both the FortiManager NATed IP address and NAT device IP address on FortiGate.
- B. During discovery, FortiManager sets the NATed device IP address on FortiGate.
- C. During discovery, FortiManager uses only the FortiGate serial number to establish the connection.
- D. During discovery, FortiManager sets the FortiManager NATed IP address on FortiGate.

Answer: D

NEW QUESTION # 59

Refer to the exhibit.

FortiManager managed devices

You are using the Quick Install option to install configuration changes on the managed FortiGate.

Which two statements correctly describe the result? (Choose two.)

- A. It provides the option to preview only the policy package changes before installing them.
- B. It installs provisioning template changes on the FortiGate device.
- C. It installs device-level changes on the FortiGate device without launching the Install Wizard.
- D. It installs all the changes in the device database first and the administrator must reinstall the changes on the FortiGate device.

Answer: A,C

Explanation:

* Option B: It provides the option to preview only the policy package changes before installing them. This is correct. The Quick Install option in FortiManager provides a preview of policy changes before they are applied, allowing administrators to review and confirm the changes.

* Option D: It installs device-level changes on the FortiGate device without launching the Install Wizard. This is correct. Quick Install allows for the immediate installation of device-level changes, such as interface or routing configurations, directly onto the FortiGate without going through the full Install Wizard.

Explanation of Incorrect Options:

* Option A: It installs provisioning template changes on the FortiGate device. This is incorrect because Quick Install does not specifically deal with provisioning templates.

* Option C: It installs all the changes in the device database first and the administrator must reinstall the changes on the FortiGate device. This is incorrect because Quick Install directly applies changes to the FortiGate device, not requiring a separate reinstall step.

FortiManager References:

* Refer to "FortiManager Administration Guide" for details on "Quick Install" functionality under "Device Management."

NEW QUESTION # 60

You are moving managed FortiGate devices from one ADOM to a new ADOM.

Which statement correctly describes the expected result?

- A. Policy packages will be imported into the new ADOM automatically.
- B. Any unused objects from a previous ADOM are moved to the new ADOM automatically.
- C. The shared device settings will be installed automatically.
- D. The shared policy package will not be moved to the new ADOM automatically.

Answer: D

Explanation:

When you move a device to a new ADOM, the shared policy packages do not transfer automatically. You would need to manually configure or assign the necessary policy packages in the new ADOM.

NEW QUESTION # 61

Refer to the exhibit.

FortiManager cluster settings

FortiManager

Cluster Settings

Failover Mode: Manual VRRP

Operation Mode: Standalone Primary Secondary

Peer IP and Peer SN

IP Type	Peer IP	Peer SN	Action
IPv4	10.0.1.242	FMG-VM0A169	✕ +

Cluster ID: 1 (1-64)

Group Password: (1-64)

File Quota: 4096 MB (2048-20480)

Heart Beat Interval: 10 Seconds

Failover Threshold: 30 (1-255)

VIP: 10.0.1.245

VRRP Interface: port2

Priority: 1 (1-253)

Unicast: ☐

Monitored IP

IP	Interface	Action
10.0.1.241	port2	✕ +

Download Debug Log: Download

In the event that one of the secondary FortiManager devices fails, which action must be performed to return the FortiManager HA manual mode to a working state?

- A. Reconfigure the primary device to remove the peer IP of the failed device.
- B. The FortiManager HA state transition is transparent to administrators and does not require any reconfiguration.
- C. Reboot the failed device to remove its IP from the primary device.
- D. Manually promote one of the working secondary devices to the primary role, and reboot the old primary device to remove the peer IP of the failed device.

Answer: A

NEW QUESTION # 62

Push updates are failing on a FortiGate device that is located behind a NAT device. Which two settings should the administrator check? (Choose two.)

- A. That the external IP address on the NAT device is set to DHCP and configured with the virtual IP
- B. That the virtual IP address and correct ports are set on the NAT device
- C. That the override server IP address is set on FortiManager and the NAT device
- D. That the NAT device IP address and correct ports are configured on FortiManager

Answer: B,D

Explanation:

When push updates are failing on a FortiGate device behind a NAT device, the administrator should check:

- * A. That the override server IP address is set on FortiManager and the NAT device.
- * The override server IP should be configured to ensure that FortiManager uses the correct IP address that can traverse the NAT to reach the FortiGate device.
- * D. That the virtual IP address and correct ports are set on the NAT device.
- * The NAT device must have the correct virtual IP (VIP) configured to map the FortiGate's internal IP to an external address, along with the correct ports needed for communication.

- * Suggests setting the external IP on the NAT device to DHCP, which is not relevant to solving the push update issue.
- * Implies configuring NAT device IP and ports on FortiManager, which is less likely needed compared to configuring the correct VIP and ports.

FortiManager References:

- * Refer to FortiManager 7.4 Administrator Guide: Device Management and NAT Configuration.
