WGU D487 OA EXAM

what is the analysis of computer software that is performed by executing programs on a real or virtual processor in real time?

- -dynamic analysis
- -static analysis
- -fuzzing
- -security testing

Answer--dynamic analysis

which person is responsible for designing, planning, and implementing secure coding practices and security testing methodologies?

- -software security architect
- -product security developer
- -software security champion

P.S. Free 2025 WGU Secure-Software-Design dumps are available on Google Drive shared by PDFDumps: https://drive.google.com/open?id=1k3aGb48BFkbhNefdEnveSVbabfF2ZfmJ

Two WGU Secure-Software-Design practice tests of PDFDumps (desktop and web-based) create an actual test scenario and give you a Secure-Software-Design real exam feeling. These Secure-Software-Design Practice Tests also help you gauge your WGU Certification Exams preparation and identify areas where improvements are necessary.

Our product's passing rate is 99% which means that you almost can pass the test with no doubts. The reasons why our Secure-Software-Design study materials' passing rate is so high are varied. Firstly, our test bank includes two forms and they are the PDF test questions which are selected by the senior lecturer, published authors and professional experts and the practice test software which can test your mastery degree of our Secure-Software-Design Study Materials at any time. The two forms cover the syllabus of the entire test. Our questions and answers include all the questions which may appear in the exam and all the approaches to answer the questions. So we provide the strong backing to help clients to help them pass the test.

Secure-Software-Design Valid Mock Exam & Secure-Software-Design Download Demo

Nowadays the requirements for jobs are higher than any time in the past. The job-hunters face huge pressure because most jobs require both working abilities and profound major knowledge. Passing Secure-Software-Design exam can help you find the ideal job. If you buy our Secure-Software-Design Test Prep you will pass the exam easily and successfully, and you will realize you dream to find an ideal job and earn a high income. Our product is of high quality and the passing rate and the hit rate are both high.

WGUSecure Software Design (KEO1) Exam Sample Questions (Q84-Q89):

NEW QUESTION #84

The software security team is performing security testing on a new software product using a testing tool that scans the running application for known exploit signatures.

Which security testing technique is being used?

- A. Automated vulnerability scanning
- B. Penetration testing
- C. Properly-based testing
- D. Source-code analysis

Answer: A

Explanation:

The security testing technique that involves using a testing tool to scan a running application for known exploit signatures is known as Automated Vulnerability Scanning. This method is part of dynamic analysis, which assesses the software in its running state to identify vulnerabilities that could be exploited by attackers. Automated vulnerability scanning tools are designed to detect and report known vulnerabilities bycomparing the behavior and outputs of the application against a database of known exploit signatures 1. References: 1: Application Security Testing: Tools, Types and Best Practices | GitHub

NEW QUESTION #85

Which privacy impact statement requirement type defines how personal information will be protected when authorized or independent external entities are involved?

- A. Data integrity requirements
- B. User controls requirements
- C. Personal information retention requirements
- D. Third party requirements

Answer: D

Explanation:

The privacy impact statement requirement that defines how personal information will be protected when authorized or independent external entities are involved is best categorized under Third party requirements.

This aspect of privacy impact assessments ensures that personal data is safeguarded even when it is necessary to involve third parties, which could be service providers, partners, or other entities that might handle personal information on behalf of the primary organization. These requirements typically include stipulations for data handling agreements, security measures, and compliance checks to ensure that third parties maintain the confidentiality and integrity of the personal information they process.

A guide to Privacy Impact Assessments - Information and Privacy2

Personal Information Protection Law of China: Key Compliance Considerations 3 Privacy Impact Assessment - General Data Protection Regulation (GDPR) 4 Privacy impact assessment (PIA) - TechTarget 5

NEW QUESTION #86

Which secure coding best practice says to use a single application-level authorization component that will lock down the application if it cannot access its configuration information?

- A. Session management
- B. Access control
- C. Data protection
- D. Communication security

NEW QUESTION #87

Credit card numbers are encrypted when stored in the database but are automatically decrypted when data is fetched. The testing tool intercepted the GET response, and testers were able to view credit card numbers as clear text. How should the organization remediate this vulnerability?

- A. Enforce role-based authorization controls in all application layers
- B. Ensure all data in transit is encrypted
- C. Ensure there is an audit trail for all sensitive transactions
- D. Never cache sensitive data

Answer: B

Explanation:

The core issue here is cleartext transmission of sensitive data, and option C directly addresses this:

- * Addressing the Problem: The scenario reveals the vulnerability is the lack of encryption during data transmission (the GET response). Ensuring encryption in transit fixes this specific exploit.
- * Transport Layer Security: Encryption during transit is typically achieved through protocols like TLS (HTTPS), preventing the interception of sensitive information.

NEW QUESTION #88

Which security assessment deliverable identities possible security vulnerabilities in the product?

- A. List of third-party software
- B. Threat profile
- C. Metrics template
- D. SDL project outline

Answer: B

Explanation:

A threat profile is a security assessment deliverable that identifies possible security vulnerabilities in a product. It involves a systematic examination of the product to uncover any weaknesses that could potentially be exploited by threats. The process typically includes identifying the assets that need protection, assessing the threats to those assets, and evaluating the vulnerabilities that could be exploited by those threats. This deliverable is crucial for understanding the security posture of a product and for prioritizing remediation efforts.

References: The importance of a threat profile in identifying security vulnerabilities is supported by various security resources. For instance, Future Processing's blog on vulnerability assessments outlines the steps involved in identifying security vulnerabilities, which align with the creation of a threat profile1. Additionally, UpGuard's article on conducting vulnerability assessments further emphasizes the role of identifying vulnerabilities as part of the security assessment process2.

NEW QUESTION #89

••••

Our company has been putting emphasis on the development and improvement of Secure-Software-Design test prep over ten year without archaic content at all. So we are bravely breaking the stereotype of similar content materials of the exam, but add what the exam truly tests into our Secure-Software-Design exam guide. So we have adamant attitude to offer help rather than perfunctory attitude. All Secure-Software-Design Test Prep is made without levity and the passing rate has up to 98 to 100 percent now. We esteem your variant choices so all these versions of Secure-Software-Design exam guides are made for your individual preference and inclination.
