

Authorized CAS-004 Certification & CAS-004 Reliable Braindumps Files

BONUS!!! Download part of TestKingFree CAS-004 dumps for free: https://drive.google.com/open?id=1rXGr15Um0nYHQgWsaoFh-IH_V2GIK9He

The CompTIA CAS-004 exam questions of TestKingFree mainly come in three formats: CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) dumps PDF, Web-Based CAS-004 Practice Exam and Desktop CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) Practice Test Software. With thousands of satisfied customers, you can start your preparation for CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) certification with TestKingFree.

CompTIA CAS-004 exam is intended for IT professionals who have a strong background in network security and information security. It is designed to test the skills and knowledge of candidates in identifying and assessing security risks, implementing security solutions, and managing security operations in complex enterprise environments. CAS-004 Exam is vendor-neutral, which means that it is not focused on any specific technology or product. Instead, it tests the candidate's ability to apply security principles and best practices in various scenarios.

Clear the CompTIA CAS-004 Exam with TestKingFree

TestKingFree CAS-004 desktop and web-based practice exams are distinguished by their excellent features. The CAS-004 web-based practice exam is supported by all operating systems and can be taken through popular browsers including Chrome, MS Edge, Internet Explorer, Opera, Firefox, and Safari. Windows computers can run the desktop CompTIA CAS-004 Practice Test software. You won't require a live internet connection to use the desktop CompTIA exam simulation software once you've verified the product's license.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q68-Q73):

NEW QUESTION # 68

An organization is deploying a new, online digital bank and needs to ensure availability and performance. The cloud-based architecture is deployed using PaaS and SaaS solutions, and it was designed with the following considerations:

- Protection from DoS attacks against its infrastructure and web applications is in place.
- Highly available and distributed DNS is implemented.
- Static content is cached in the CDN.
- A WAF is deployed inline and is in block mode.
- Multiple public clouds are utilized in an active-passive architecture.

With the above controls in place, the bank is experiencing a slowdown on the unauthenticated payments page. Which of the following is the MOST likely cause?

- A. The public cloud provider is applying QoS to the inbound customer traffic.
- B. A DDoS attack is targeted at the CDN.
- C. The API gateway endpoints are being directly targeted.
- D. The site is experiencing a brute-force credential attack.

Answer: D

NEW QUESTION # 69

A security engineer needs to ensure production containers are automatically scanned for vulnerabilities before they are accepted into the production environment. Which of the following should the engineer use to automatically incorporate vulnerability scanning on every commit?

- A. CI/CD pipeline
- B. Container orchestrator
- C. Integrated development environment
- D. Code repository

Answer: A

Explanation:

Step by Step

CI/CD pipeline (Continuous Integration/Continuous Deployment) automates the testing, including vulnerability scanning, for every code commit before deploying to production.

Code repository stores the code but does not handle scanning.

Integrated development environment (IDE) aids developers in writing and testing code but does not enforce automated scanning.

Container orchestrator manages container deployment but does not directly address pre-production scanning.

NEW QUESTION # 70

Real-time, safety-critical systems MOST often use serial busses that:

- A. have non-deterministic behavior and are not deployed with encryption.
- B. have non-deterministic behavior and are deployed with encryption.
- C. have deterministic behavior and are not deployed with encryption.
- D. have deterministic behavior and are deployed with encryption.

Answer: C

Explanation:

For safety-critical systems, CAN is the most widely used communication protocol and does not have a built-in encryption mechanism. This prioritizes low latency and deterministic response times over encryption.

NEW QUESTION # 71

An organization is implementing a new identity and access management architecture with the following objectives:

Supporting MFA against on-premises infrastructure

Improving the user experience by integrating with SaaS applications

Applying risk-based policies based on location

Performing just-in-time provisioning

Which of the following authentication protocols should the organization implement to support these requirements?

- A. OTP and 802.1X
- **B. OAuth and OpenID**
- C. Kerberos and TACACS
- D. SAML and RADIUS

Answer: B

NEW QUESTION # 72

A financial institution generates a list of newly created accounts and sensitive information on a daily basis. The financial institution then sends out a file containing thousands of lines of data. Which of the following would be the best way to reduce the risk of a malicious insider making changes to the file that could go undetected?

- A. Tune the rules on the host-based IDS for the application server to trigger automated alerts when the application server is accessed from the internet.
- B. Create a script that compares the size of the file on an hourly basis and generates alerts when changes are identified.
- C. Write a SIEM rule that generates a critical alert when files are created on the application server.
- **D. Implement a FIM that automatically generates alerts when the file is accessed by IP addresses that are not associated with the application.**

Answer: D

Explanation:

File Integrity Monitoring (FIM) is a technology that can detect changes in files, often used to safeguard critical data. Implementing a FIM solution that generates alerts for access by unauthorized IP addresses would ensure that any unauthorized modifications to the file can be detected and acted upon. This helps in mitigating the risk of insider threats, as it would alert to any changes not made through the expected application process.

NEW QUESTION # 73

.....

If you decide to buy our CAS-004 study questions, you can get the chance that you will pass your exam and get the certification successfully in a short time. we can claim that if you study with our CAS-004 exam questions for 20 to 30 hours, then you will be easy to pass the exam. In a word, if you want to achieve your dream and become the excellent people in the near future, please buy our CAS-004 Actual Exam, it will help you get all you want!
