You are lucky enough to come across our CAD exam materials. We can help you improve in the shortest time on the CAD exam. Even you do not know anything about the CAD Exam. It absolutely has no problem. You just need to accept about twenty to thirty hours' guidance, it is easy for you to take part in the exam. As you can see, our CAD practice exam will not occupy too much time.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q47-Q52):

NEW QUESTION # 47

Modules must have a Link type. Which one of the following is a list of Link types?

- A. Assessment, List of Records, Content Page, Roles
- **B. Assessment, List of Records, Separator, Timeline Page**
- C. List of Records, Separator, Catalog Type, Roles
- D. List of Records, Content Page, Order, URL (from arguments:)

Answer: B

Explanation:

Reference: https://docs.servicenow.com/bundle/geneva-servicenow-platform/page/administer/navigation_and_ui/reference/r_ModuleLinkTypes.html A module is a navigation item that provides access to a feature or functionality in ServiceNow. Modules must have a link type, which determines how the module behaves when clicked. The following is a list of

link types:

Assessment. This is a link type that opens an assessment, which is a survey or questionnaire that measures the effectiveness of a process or service.

List of Records. This is a link type that opens a list of records from a table or a saved filter.

Separator. This is a link type that creates a horizontal line to separate modules in the application menu.

Timeline Page. This is a link type that opens a timeline page, which is a graphical representation of the duration and sequence of events or tasks.

The following are not link types, but other module attributes or field types:

List of Records, Separator, Catalog Type, Roles. These are not link types, but a combination of a link type (List of Records), a module attribute (Separator), a field type (Catalog Type), and a user attribute (Roles).

List of Records, Content Page, Order, URL (from arguments:). These are not link types, but a combination of a link type (List of Records), a module attribute (Content Page), a field name (Order), and a link type argument (URL).

Assessment, List of Records, Content Page, Roles. These are not link types, but a combination of a link type (Assessment), a link type (List of Records), a module attribute (Content Page), and a user attribute (Roles). References: Modules, Create a Module

NEW QUESTION # 48

What syntax is used in a Record Producer script to access values from Record Producer form fields?

- A. `current.field_name`
- B. `producer.variable_name`
- C. `producer.field_name`
- D. `current.variable_name`

Answer: B

Explanation:

The syntax used in a Record Producer script to access values from Record Producer form fields is `producer.`

`variable_name`. A Record Producer is a type of catalog item that allows users to create records on any table from the service catalog. A Record Producer script is a server-side script that runs when a Record Producer is submitted, and can be used to set values or perform actions on the generated record. The producer object is a global object that represents the Record Producer form and its variables. The `variable_name` is the name of the variable defined in the Record Producer. References: [ServiceNow Docs - Record producers], [ServiceNow Docs - Record producer script] Reference: https://community.servicenow.com/community?id=community_QUESTION_NO:

`&sys_id=cc3803addb1cdbc01dcdf3231f9619b6`

NEW QUESTION # 49

What are three ServiceNow table creation methods? (Choose three.)

- A. Using Flow Designer
- B. Upload and turn a spreadsheet into a custom table
- C. Create a custom table
- D. Extend a table
- E. Use the Now Experience Table Creator
- F. Using legacy Workflows

Answer: B,C,D

Explanation:

"If there are no spreadsheets or existing tables to use for your application, you can create and customize a new table." see this quote in link below:

<https://docs.servicenow.com/bundle/tokyo-application-development/page/build/app-engine-studio/task/create-table.html> Also see:

<https://docs.servicenow.com/bundle/tokyo-application-development/page/build/guided-app-creator/task/gac-create-table-from-scratch.html> Also, no search results if search on "Now Experience Table Creator".

NEW QUESTION # 50

Which of the following are configured in an Email Notification?

a) Who will receive the notification.

- b) What content will be in the notification.
- c) When to send the notification.
- d) How to send the notification.

- A. b, c and d
- B. a, b, and d
- C. a, c and d
- **D. a, b and c**

Answer: D

Explanation:

https://docs.servicenow.com/bundle/tokyo-servicenow-platform/page/administer/notification/task/t_CreateANotification.html

Reference:

An Email Notification is a record that defines the content and conditions for sending an email message from the ServiceNow platform. The following are configured in an Email Notification:

Who will receive the notification. This is specified by the Recipients related list, which can include users, groups, email addresses, or scripts that return email addresses.

What content will be in the notification. This is specified by the Subject and Message HTML fields, which can include variables, scripts, or templates to dynamically generate the email content.

When to send the notification. This is specified by the When to send tab, which defines the conditions and events that trigger the email notification.

The following is not configured in an Email Notification:

How to send the notification. This is not a configuration option for an Email Notification. The platform uses the SMTP protocol to send email messages, and the email properties control the email server settings and behavior. Reference: Email Notifications, Get Started with Notifications

NEW QUESTION # 51

Which one of the following is a benefit of creating an Application Properties page for each application you develop?

- A. Application users know to go to the Application Properties page to change the appearance of an application
- **B. Application Properties allow a developer or admin to make changes to an application's behavior without modifying application artifacts**
- C. Application Properties allow a developer to override the application properties inherited from ServiceNow
- D. An Application Properties page is a good landing page for an application

Answer: B

Explanation:

A benefit of creating an Application Properties page for each application you develop is that Application Properties allow a developer or admin to make changes to an application's behavior without modifying application artifacts. Application Properties are system properties that store configuration information for a specific application. They can be used to control various aspects of the application, such as feature flags, default values, thresholds, or URLs. By creating an Application Properties page, you can group and display all the properties related to your application in one place and make them easy to access and update. This way, you can avoid hard-coding static data in your application code and make your application more flexible and maintainable.
