

Authorized VMware 2V0-41.24: New VMware NSX 4.X Professional V2 Test Preparation - High Pass-Rate SurePassExams 2V0-41.24 Exam Bootcamp

DOWNLOAD the newest SurePassExams 2V0-41.24 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1m2pN1us-B_jkzPzZhAnzM7Nf7fITS4ul

The scoring system of our 2V0-41.24 exam torrent absolutely has no problem because it is intelligent and powerful. First of all, our researchers have made lots of efforts to develop the scoring system. So the scoring system of the 2V0-41.24 test answers can stand the test of practicability. Once you have submitted your practice. The scoring system will begin to count your marks of the 2V0-41.24 Exam guides quickly and correctly. At the same time, there is specific space below every question for you to make notes. So you can quickly record the important points or confusion of the 2V0-41.24 exam guides.

VMware 2V0-41.24 Exam Syllabus Topics:

Topic	Details
Topic 1	• Install, Configure, and Administrate the VMware Solution: This domain targets VMware System administrators and emphasizes preparing an NSX infrastructure for deployment. Candidates will learn to create transport zones and configure essential components necessary for a functional NSX environment.
Topic 2	• VMware Solution: This section measures the skills of VMware NSX Networking professionals and covers knowledge of the VMware Virtual Cloud Network and NSX. Candidates will demonstrate an understanding of the NSX management cluster and the data plane, focusing on how these components interact to provide network virtualization.
Topic 3	• Troubleshoot and Optimize the VMware Solution: This section evaluates the skills of VMware Networking Professionals in troubleshooting and optimizing NSX solutions. Candidates will use log files to identify issues, including locating default log file locations and generating log bundles to assist in diagnostics.

VMware 2V0-41.24 Exam Practice Material in Three Diverse Versions

We provide 24-hour online service for all customers who have purchased 2V0-41.24 test guide. You can send us an email to ask questions at anytime, anywhere. For any questions you may have during the use of 2V0-41.24 exam questions, our customer service staff will be patient to help you to solve them. At the same time, if you have problems with downloading and installing, 2V0-41.24 Torrent prep also has dedicated staff that can provide you with remote online guidance. In order to allow you to use our products with confidence, 2V0-41.24 test guide provide you with a 100% pass rate guarantee. Once you unfortunately fail the exam, we will give you a full refund, and our refund process is very simple.

VMware NSX 4.X Professional V2 Sample Questions (Q78-Q83):

NEW QUESTION # 78

Refer to the exhibit.

An administrator would like to change the private IP address of the NAT VM 172.16.101.11 to a public address of 80.80.80.1 as the packets leave the NAT-Segment network.

Which type of NAT solution should be implemented to achieve this?

- A. Reflexive NAT
- B. NAT64
- C. DNAT
- D. SNAT

Answer: D

Explanation:

SNAT stands for Source Network Address Translation. It is a type of NAT that translates the source IP address of outgoing packets from a private address to a public address. SNAT is used to allow hosts in a private network to access the internet or other public networks. In the exhibit, the administrator wants to change the private IP address of the NAT VM 172.16.101.11 to a public address of 80.80.80.1 as the packets leave the NAT-Segment network. This is an example of SNAT, as the source IP address is modified before the packets are sent to an external network.

According to the VMware NSX 4.x Professional Exam Guide, SNAT is one of the topics covered in the exam objectives. To learn more about SNAT and how to configure it in VMware NSX, you can refer to the following resources:

VMware NSX Documentation: NAT 3

VMware NSX 4.x Professional: NAT Configuration 4

VMware NSX 4.x Professional: NAT Troubleshooting 5

<https://docs.vmware.com/en/VMware-NSX-T-Data-Center/3.2/administration/GUID-7AD2C384-4303-4D6C-A44A-DEF45AA18A92.html>

NEW QUESTION # 79

Which TraceFlow traffic type should an NSX administrator use for validating connectivity between App and DB virtual machines that reside on different segments?

- A. Multicast
- B. Anycast
- C. Broadcast
- D. Unicast

Answer: A

Explanation:

In NSX, Unicast traffic type should be used in TraceFlow when validating connectivity between two specific virtual machines, such as App and DB VMs, that reside on different segments. Unicast traffic is directed from one source to a single destination, making it suitable for testing direct connectivity between two VMs.

NEW QUESTION # 80

Which three data collection sources are used by NSX Network Detection and Response to create correlations/Intrusion campaigns? (Choose three.)

- A. East-West anti-malware events from the ESXi hosts
- B. Distributed Firewall flow data from the ESXi hosts
- C. Suspicious Traffic Detection events from NSX Intelligence
- D. Files and anti-malware (file events) from the NSX Edge nodes and the Security Analyzer
- E. IDS/IPS events from the ESXi hosts and NSX Edge nodes

Answer: C,D,E

Explanation:

<https://docs.vmware.com/en/VMware-NSX-T-Data-Center/3.2/administration/GUID-14BBE50D-9931-4719-8FA7-884539C0D277.html>

NEW QUESTION # 81

Which choice is a valid insertion point for North-South network introspection?

- A. Partner SVM
- B. Host Physical NIC
- C. Tier-0 gateway
- D. Guest VM vNIC

Answer: C

Explanation:

<https://docs.vmware.com/en/VMware-NSX-T-Data-Center/3.2/administration/GUID-53D6C480-7AD3-4B23-922D-430C89992B57.html>

In VMware NSX 4.x, the Tier-0 gateway serves as a critical component for North-South traffic management, which refers to the traffic entering and exiting the data center. It essentially acts as a bridge between the external networks and the internal NSX-T Data Center environment.

The Tier-0 gateway is designed to handle various functionalities including routing, NAT, and firewalling, making it an effective point for network introspection. Network introspection at the Tier-0 gateway allows administrators to monitor, manage, and secure the traffic as it flows between different networks, including the traffic headed to and from the internet or other external networks.

Here's why other options are less appropriate:

A) Guest VM vNIC: This refers to the virtual network interface cards attached to virtual machines. While they handle East-West traffic (traffic within the data center), they are not typically used for North-South traffic introspection.

B) Partner SVM: Service Virtual Machines (SVMs) provided by third-party vendors can integrate with NSX for various services like security, but they are not the direct insertion points for North-South traffic introspection.

D) Host Physical NIC: These are the network interface cards on the physical hosts. Although they are involved in the underlying transport of North-South traffic, they do not serve as insertion points for introspection in the context of NSX.

By utilizing the Tier-0 gateway for North-South introspection, organizations can achieve a centralized and efficient approach to traffic management and security at the entry/exit points of the network.

Reference: VMware NSX-T Data Center documentation provides detailed explanations of gateway functionalities and their roles in network introspection.

VMware NSX-T Architecture and Component guides detail the use of Tier-0 and Tier-1 gateways in traffic management and security implementations.

NEW QUESTION # 82

An NSX administrator wants to create a Tier-0 Gateway to support equal cost multi-path (ECMP) routing. Which failover detection protocol must be used to meet this requirement?

- A. Bidirectional Forwarding Detection (BFD)
- B. Virtual Router Redundancy Protocol (VRRP)
- C. Host Standby Router Protocol (HSRP)
- D. Beacon Probing (BP)

Answer: A

Explanation:

According to the VMware NSX 4.x Professional documents and tutorials, BFD is a failover detection protocol that provides fast and reliable detection of link failures between two routing devices. BFD can be used with ECMP routing to monitor the health of the ECMP paths and trigger a route change in case of a failure¹². BFD is supported by both BGP and OSPF routing protocols in NSX-T3. BFD can also be configured with different timers to achieve different detection times³.

NEW QUESTION # 83

.....

In this era of the latest technology, we should incorporate interesting facts, figures, visual graphics, and other tools that can help people read the VMware NSX 4.X Professional V2 (2V0-41.24) exam questions with interest. SurePassExams uses pictures that are related to the VMware NSX 4.X Professional V2 (2V0-41.24) certification exam and can even add some charts, and graphs that show the numerical values.
