Cloud-Digital-Leader Latest Braindumps Files | Cloud-Digital-Leader Learning Materials

Actualtests4sure is a platform that will provide candidates with most effective Cloud-Digital-Leader study materials to help them pass their exam. It has been recognized by all of our customers, because it was compiled by many professional experts of our website. Not only did they pass their exam but also got a satisfactory score. These are due to the high quality of our Cloud-Digital-Leader study torrent that leads to such a high pass rate.

Google Cloud Digital Leader Exam is a valuable certification for individuals who want to demonstrate their expertise in cloud computing and work with Google Cloud Platform. Cloud-Digital-Leader Exam is comprehensive and covers a range of topics, making it a challenging but valuable learning experience. It is available to anyone who wants to take it and is offered in multiple languages, making it accessible to individuals all over the world.

Google Cloud Digital Leader Sample Questions (Q387-Q392):

NEW QUESTION # 387

Your organization needs to establish private network connectivity between its on-premises network and its workloads running in Google Cloud. You need to be able to set up the connection as soon as possible.

Which Google Cloud product or feature should you use?

- **A. Cloud Interconnect**
- B. Cloud VPN
- C. Direct Peering
- D. Cloud CDN

Answer: A

Explanation:

Explanation

Private Google Access for on-premises hosts provides a way for on-premises systems to connect to Google APIs and services by routing traffic through a Cloud VPN tunnel.

NEW QUESTION # 388

Customers are reporting very high latencies when accessing an application from the United States. The application is currently running in a single region in Europe.

What should the organization do?

- **A. Run a replica of the application in a region in the United States.**
- B. Run the application in additional regions in Europe.
- C. Run the application in additional zones in the European region.
- D. Set up a new billing account in the United States.

Answer: A

NEW QUESTION # 389

A startup client of yours does offline data processing for a few of its clients. They are migrating their applications and the associated data to Google Cloud. They have 100TB of data to move. They presently have a very small private data center setup connected to a local internet provider. The maximum bandwidth they are able to get is 100Mbps. How long will it take them to transfer the data over the internet if the transfer goes smoothly?

- **A. About 100 days.**
- B. About 24 hours.
- C. About 12 days.
- D. About 2 years.

Answer: A

Explanation:

The key reason I included this question is to clarify some terminologies that will be important for your estimates. The data size mentioned is a TB terabyte. Note the "byte". The speed is mentioned in Mbps, which is Megabits per second. Note the "bits". 8 bits make a byte. So, to get the actual number of bits transferred, you need to multiply the TB number by 8.

Total data transferred (in bits) = 100 * 1,000,000,000,000 * 8 bits

Speed = 100Mbps = 100 * 1,000,000. i.e. 100 million bits are transferred per second.

Hence time taken to transfer all the data = Total Data/Speed = 8,000,000 seconds.

Number of seconds in a day = 24*60*60 = 86,400

Total time taken in days = 8,000,000/86,400 = 92.59 days

NEW QUESTION # 390

Your company is running the majority of its workloads in a co-located data center. The workloads are running on virtual machines (VMs) on top of a hypervisor and use either Linux or Windows server editions. As part of your company's transformation strategy, you need to modernize workloads as much as possible by adopting cloud-native technologies. You need to migrate the workloads into Google Cloud.

What should you do?

- A. Export the VMs into VMDK format, and import them into Compute Engine
- **B. Migrate the workloads using Migrate for Anthos**
- C. Export the VMs into VMDK format, and import them into Google Cloud VMware Engine
- D. Migrate the workloads using Migrate for Compute Engine

Answer: B

Explanation:

Anthos: Anthos lets you build, deploy, and manage applications anywhere in a secure, consistent manner. You can modernize existing applications running on virtual machines while deploying cloud-native apps on containers in an increasingly hybrid and multi-cloud world.

NEW QUESTION # 391

An organization's developers are growing increasingly frustrated by the limitations of their on-premises infrastructure. How would they benefit from leveraging cloud technology?

- A. They can expect 100% service availability.
- B. They can optimize maintenance for their on-premises infrastructure.
- **C. They can have new tools to innovate and optimize resource usage.**
- D. They can avoid the limitations of serverless computing.

Answer: C

Explanation:

Google cloud have vast majority of products/tools that you can use to innovate. Additionally, there are products in google that scale automatically based from usage (Ex. App Engine, Cloud Run, etc.)
