

# Avail the Best Accurate NSE7\_LED-7.0 Latest Demo to Pass NSE7\_LED-7.0 on the First Attempt

P.S. Free 2025 Fortinet NSE7\_LED-7.0 dumps are available on Google Drive shared by DumpTorrent:  
<https://drive.google.com/open?id=1epa80ApGO83gkSKStJXHa8LDVTaukHO>

DumpTorrent has a huge Fortinet industry elite team. They all have high authority in the NSE7\_LED-7.0 area. They use professional knowledge and experience to provide training materials for people ready to participate in different IT certification exams. The accuracy rate of exam practice questions and answers provided by DumpTorrent is very high and they can 100% guarantee you pass the exam successfully for one time. Besides, we will provide you a free one-year update service.

Fortinet NSE 7 - LAN Edge 7.0 certification is a vital certification for IT professionals who want to enhance their career prospects in the network security field. Fortinet NSE 7 - LAN Edge 7.0 certification is highly recognized in the industry and is a great way to showcase an individual's skills and expertise in Fortinet's security solutions. Fortinet NSE 7 - LAN Edge 7.0 certification can help professionals to stand out from the competition and increase their earning potential.

## NSE7\_LED-7.0 Latest Demo Exam | Fortinet NSE7\_LED-7.0: Fortinet NSE 7 - LAN Edge 7.0 – 100% free

In order to reflect our sincerity on consumers and the trust of more consumers, we provide a 100% pass rate guarantee for all customers who have purchased NSE7\_LED-7.0 study quiz. If you fail to pass the exam after you purchased NSE7\_LED-7.0 preparation questions, you only need to provide your transcript to us, and then you can receive a full refund. Or we can free exchange two other exam materials for you if you have other exams to attend at the same time. So just buy our NSE7\_LED-7.0 Exam Questions!

Fortinet NSE7\_LED-7.0 exam is a critical certification for network security professionals who want to stay ahead of the competition in the industry. Fortinet NSE 7 - LAN Edge 7.0 certification is designed to validate your skills and knowledge in LAN edge security, which is a critical area of network security today. With this certification, you can demonstrate your expertise in designing and

implementing secure LAN edge solutions that can protect your organization's network from cyber threats.

Fortinet NSE7\_LED-7.0 Exam is an essential certification for individuals who want to demonstrate their expertise in managing and deploying secure LAN edge solutions. As the networking and security industry continue to grow, the demand for qualified professionals who can manage and deploy Fortinet's latest products is also growing. With this certification, candidates will most certainly benefit in their career growth, as the Fortinet NSE-7 certification is well recognized and valued in the industry.

## Fortinet NSE 7 - LAN Edge 7.0 Sample Questions (Q38-Q43):

### NEW QUESTION # 38

Refer to the exhibit. Examine the FortiGate configuration, FortiAnalyzer logs, and FortiGate widget shown in the exhibit.

An administrator is testing the Security Fabric quarantine automation. The administrator added FortiAnalyzer to the Security Fabric, and configured an automation stitch to automatically quarantine compromised devices. The test device (10.0.2.1) is connected to a managed FortiSwitch device.

After trying to access a malicious website from the test device, the administrator verifies that FortiAnalyzer has a log for the test connection. However, the device is not getting quarantined by FortiGate, as shown in the quarantine widget.

Which two scenarios are likely to cause this issue? (Choose two.)

The screenshot displays the FortiGate configuration and logs. On the left, the 'Edit Automation Stitch' window shows a stitch named 'IOC' with status 'Enable'. The trigger is 'Compromised Host - High'. The action is 'Quarantine on FortiSwitch + FortiAP'. The stitch is currently empty. On the right, the 'FortiAnalyzer Logging' widget shows a log for the test device (10.0.2.1) connecting to a malicious website (http://abc.com/ml/). The log entry shows the device ID 'FGVM1V000014', source IP '10.0.2.2', destination IP '23.217.138.108', service 'HTTP', and action 'blocked'. The quarantine widget below the logs shows 'No results'.

#	Date/Time	Device ID	User	Source	Destination IP	Service	Host Name	Action	URL	Category	Description
1	11:16:29	FGVM1V000014		10.0.2.2	23.217.138.108	HTTP	abc.com.ml	blocked	http://abc.com.ml/	Malicious Websites	
2	11:16:29	FGVM1V000014		10.0.2.2	23.217.138.108	HTTP	abc.com.ml	blocked	http://abc.com.ml/favicon.ico	Malicious Websites	

- A. The device does not have FortiClient installed
- B. The web filtering rating service is not working
- C. FortiAnalyzer does not consider the malicious website an indicator of compromise (IOC)
- D. FortiAnalyzer does not have a valid threat detection services license

Answer: C,D

Explanation:

According to the exhibits, the administrator has configured an automation stitch to automatically quarantine compromised devices based on FortiAnalyzer's threat detection services. However, according to the FortiAnalyzer logs, the test device is not detected as compromised by FortiAnalyzer, even though it tried to access a malicious website. Therefore, option B is true because FortiAnalyzer does not have a valid threat detection services license, which is required to enable the threat detection services feature. Option D is also true because FortiAnalyzer does not consider the malicious website an indicator of compromise (IOC), which is a criterion for identifying compromised devices.

### NEW QUESTION # 39

Which two pieces of information can the diagnose test authserver ldap command provide?

(Choose two.)

- A. It displays whether the admin bind user credentials are correct
- B. It displays whether the user credentials are correct
- C. It displays the LDAP codes returned by the LDAP server
- D. It displays the LDAP groups found for the user

**Answer: B,D**

Explanation:

**DO NOT REPRINT**  
**© FORTINET**

### Authentication Test Command

```
# diagnose test authserver ldap <server name> <username> <password>
```

Password visible in clear text

```
# diagnose test authserver ldap Training-Lab jsmith password
authenticate 'jsmith' against 'Training-Lab' succeeded!
Group membership(s) - CN=Domain Users,CN=Users,DC=trainingAD,DC=training,DC=lab
```

Windows AD group membership returned

**FORTINET**

NSE Training Institute

© Fortinet, Inc. All Rights Reserved. 13

The CLI includes an LDAP authentication test command: `diagnose test authserver ldap`. If the credentials are correct, and if the LDAP configuration is correct, the LDAP server returns an authentication confirmation and a list of the user groups for that user.

You can run this test command as soon as you complete the LDAP server configuration, even before any user group or authentication firewall policy has been added to FortiGate. It tests only the LDAP server configuration and the LDAP communication between FortiGate and the server.

#### NEW QUESTION # 40

Refer to the exhibit.

Name: Training-Lab

Server IP/Name: 10.0.1.10

Server Port: 389

Common Name Identifier: sAMAccountName

Distinguished Name: CN=Users,DC=training,DC=lab Browse

Exchange server: ☐

Bind Type: Simple Anonymous **Regular**

Username: CN=Administrator,CN=Users,DC=train

Password: •••••••• Change

Secure Connection: ☐

Connection status: Successful

Test Connectivity

Test User Credentials

CN=Administrator,CN=Users,DC=trainingAD,DC=training,DC=lab

**FORTINET**

Examine the LDAP server configuration shown in the exhibit. Note that the Username setting has been expanded to display its full content. On the Windows AD server 10.0.1.10, the administrator used dsquery, which returned the following output:

```
>dsquery user -samid student  
"CN=student,CN=Users,DC=training3p,DC=training,DC=lab"
```

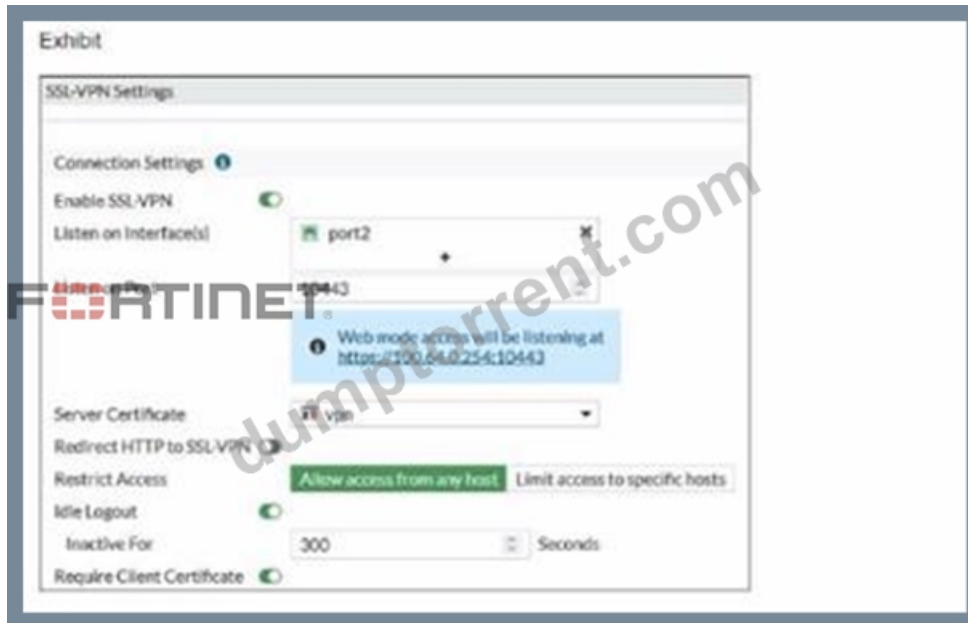

According to the output which FortiGate LDAP setting is configured incorrectly"

- A. Distinguished Name
- B. Bind Type
- C. Username
- D. Common Name Identifier

Answer: A

#### NEW QUESTION # 41

Refer to the exhibits.

Examine the debug output and the SSL VPN configuration shown in the exhibits.

Exhibit

```

FortiGate # diagnose debug application fnband -l
Debug messages will be on for 30 minutes.

FortiGate # diagnose debug enable

```

An administrator has configured SSL VPN on FortiGate. To improve security, the administrator enabled Required Client Certificate on the SSL VPN configuration page. However, a user is unable to successfully authenticate to SSL VPN. Which configuration change should the administrator make to fix the problem?

- A. Enable Redirect HTTP to SSL-VPN on the SSL VPN configuration page.
- **B. Import the CA that signed the user certificate to FortiGate.**
- C. Import the CA that signed the SSL VPN Server Certificate to FortiGate.
- D. Set the user certificate as the Server Certificate on the SSL VPN configuration page.

**Answer: B**

## NEW QUESTION # 42

Refer to the exhibit. Examine the FortiGate RSO configuration shown in the exhibit.

FortiGate is configured to receive RADIUS accounting messages on port3 to authenticate RSO users. The users are located behind port3, and the internet link is connected to port1. FortiGate is processing incoming RADIUS accounting messages successfully, and RSO users are getting associated with the RSO Group user group. However, all the users are able to access the internet, and the administrator wants to restrict internet access to RSO users only.

Which configuration change should the administrator make to fix the problem?

**Edit External Connector**

**Endpoint/Identity**

RADIUS Single Sign-On Agent

**Connector Settings**

Name: RSSO Agent

Use RADIUS Shared Secret: ☒

Send RADIUS Responses: ☒

**Edit User Group**

Name: RSSO Group

Type: RADIUS Single Sign-On (RSSO)

RADIUS Attribute Value: Users

**Edit Interface**

Name: port3

Alias:

Type: Physical Interface

VRF ID: 0

Role: Undefined

**Address**

Addressing mode: Manual DHCP Auto-managed by IPAM

IP/Netmask: 10.0.1.254/255.255.255.0

Secondary IP address:

**Administrative Access**

IPv4: ☒ HTTPS ☒ HTTP ☒ PING ☐ FMG-Access ☒ SSH ☐ SNMP ☐ FTM ☒ RADIUS Accounting ☐ Security Fabric Connection ☐ Speed Test

Name	Source	Destination	Schedule	Service	Action	NAT	Security Profiles	Log	Bytes	
Internet	port3	port1	all	always	ALL	ACCEPT	Enabled	no-inspection	UTM	204,09 MB
Implicit										

- A. Enable Security Fabric Connection on port3
- B. Create a second firewall policy from port3 to port1 and select the target destination subnets
- C. Change the RADIUS Attribute Value setting to match the name of the RADIUS attribute containing the group membership information of the RSSO users
- D. Add RSSO Group to the firewall policy

**Answer: D**

**Explanation:**

According to the exhibit, the firewall policy from port3 to port1 has no user group specified, which means that it allows all users to access the internet.
