Amazon AWS Certified Cloud Practitioner Sample Questions (Q182-Q187):

NEW QUESTION # 182

A company is designing a web application that will run on Amazon EC2 instances.

Which AWS services and features will improve availability and reduce the impact of failures for this application? (Select TWO.)

- A. Resources that are distributed across multiple Availability Zones
- B. VPC subnet ACLs to check the health of a service
- C. Resources that are distributed across multiple AWS points of presence
- D. Amazon EC2 Auto Scaling for the EC2 instances
- E. Configuration of AWS Server Migration Service (AWS SMS) to move the EC2 instances to a different AWS Region

Answer: A,D

Explanation:

The correct answers are A and C because Amazon EC2 Auto Scaling and resources that are distributed across multiple Availability Zones are AWS services and features that will improve availability and reduce the impact of failures for the web application. Amazon EC2 Auto Scaling is a service that enables users to automatically adjust the number of Amazon EC2 instances in response to changes in demand or performance.

Amazon EC2 Auto Scaling helps users to maintain optimal availability and performance of their applications by adding or removing instances as needed. Resources that are distributed across multiple Availability Zones are AWS features that enable users to increase the fault tolerance and resilience of their applications.

Availability Zones are isolated locations within an AWS Region that have independent power, cooling, and networking. Users can launch their resources, such as Amazon EC2 instances, in multiple Availability Zones to protect their applications from the failure of a single location. The other options are incorrect because they are not AWS services and features that will improve availability and reduce the impact of failures for the web application. VPC subnet ACLs are AWS features that enable users to control the inbound and outbound traffic to and from their subnets within a VPC. VPC subnet ACLs do not check the health of a service, but rather filter the network traffic based on rules. Configuration of AWS Server Migration Service (AWS SMS) is an AWS service that enables users to migrate their on-premises servers to AWS. Configuration of AWS SMS does not help to move the Amazon EC2 instances to a different AWS Region, but rather to migrate the servers from the source environment to AWS. Resources that are distributed across multiple AWS points of presence are AWS features that enable users to deliver content to their end users with low latency and high performance. AWS points of presence are edge locations that are part of the AWS Global Infrastructure. Users can use services such as Amazon CloudFront and AWS Global Accelerator to distribute their content across multiple AWS points of presence. NEW QUESTION # 183

Which tasks require the use of the AWS account root user? (Select TWO)

- A. Changing AWS Support plans
- B. Contacting AWS Support
- C. Viewing AWS CloudTrail logs
- D. Launching a new Amazon EC2 instance
- E. Changing billing currency

Answer: C,E

NEW QUESTION # 184

During a compliance review, one of the auditors requires a copy of the AWS SOC 2 report. Which service should be used to submit this request?

- A. Amazon S3
- B. AWS Artifact
- C. AWS Trusted Advisor
- D. AWS Personal Health Dashboard

Answer: B

NEW QUESTION # 185

A user deploys an Amazon RDS DB instance in multiple Availability Zones. This strategy involves which pillar of the AWS Well-Architected Framework?

- A. Security
- B. Cost optimization
- C. Reliability
- D. Performance efficiency

Answer: C

NEW QUESTION # 186

Which feature of the AWS Cloud gives users the ability to pay based on current needs rather than forecasted needs?

- A. AWS Budgets
- **B. Pay-as-you-go pricing**
- C. Savings Plans
- D. Volume discounts

Answer: B

Explanation:

Pay-as-you-go pricing is the feature of the AWS Cloud that gives users the ability to pay based on current needs rather than forecasted needs. Pay-as-you-go pricing means that users only pay for the AWS services and resources they use, without any upfront or long-term commitments. This allows users to scale up or down their usage depending on their changing business requirements, and avoid paying for idle or unused capacity. Pay-as-you-go pricing also enables users to benefit from the economies of scale and lower costs of AWS as they grow their business.
