NEW QUESTION # 154
A developer needs to maintain a development environment infrastructure and a production environment infrastructure in a repeatable fashion.
Which AWS service should the developer use to meet these requirements?

- A. AWS CloudFormation
- B. AWS Ground Station
- C. AWS loT Device Defender
- D. AWS Shield

Answer: A

Explanation:
AWS CloudFormation is a service that allows you to model and provision your AWS and third-party application resources in a repeatable and predictable way. You can use AWS CloudFormation to create, update, and delete a collection of resources as a single unit, called a stack. You can also use AWS CloudFormation to manage your development and production environments in a consistent and efficient manner4.

NEW QUESTION # 155
Which AWS service allows users to identify the changes made to a resource over time?

- A. AWS IAM
- B. AWS Config
- C. Amazon Inspector
- D. AWS Service Catalog

Answer: B

NEW QUESTION # 156
What can AWS edge locations be used for? (Select TWO.)

- A. Reducing traffic on the server by caching responses
- B. Hosting applications
- C. Sending notification messages to end users
- D. Delivering content closer to users
- E. Running NoSQL database caching services

Answer: A,D

Explanation:
CloudFront delivers your content through a worldwide network of data centers called edge locations. When a user requests content that you're serving with CloudFront, the user is routed to the edge location that provides the lowest latency (time delay), so that content is delivered with the best possible performance.

NEW QUESTION # 157
A user is running an application on AWS and notices that one or more AWS-owned IP addresses is involved in a distributed denial-of-service (DDoS) attack.

Who should the user contact FIRST about this situation?

- A. AWS Abuse team
- B. AWS Premium Support
- C. AWS Technical Account Manager
- D. AWS Solutions Architect

Answer: A

NEW QUESTION # 158
